3957. RELM MS200 Mobile Scanner

Newsgroup: rec.radio.scanner
Date: 1998-02-03 00:00:00 UTC
From: stmagnum@aol.com
Message-ID: <19980203221101.RAA05374@ladder02.news.aol.com>
Source record: 171578

I'm looking for any and all feedback about this scanner. I've read N2MCA's review of it, and was quite intrigued, but I like to here from more people who have used (and abused) it.

Thanks!

3958. Pro60 MODS???

Newsgroup: rec.radio.scanner

From: Nathan Stephens <stephenn@dpg.devry.edu>
Message-ID: <34D7B496.46FE@dpg.devry.edu>
Source record: 171579

Looking for any type of mods for the RS Pro 60 scanner.
I read that it can be modified for extra channel banks and i want to
know what it takes to fill in the gaps (512-760 & cell band if possible)

PLEASE DO NOT EMAIL ME HERE; USE GIZMO4U@JUNO.COM

3959. FM Notch Filter???

Newsgroup: rec.radio.scanner
Date: 1998-02-03 00:00:00 UTC

Optoelectronics has an FM Notch filter (Filters 88-108mhz) for $99. Radioshack has the same kind of filter but it has Coax connectors. My question is will the Radio Shack unit work the same with my AOR 2700 (500khz - 1.3 Gig). Any suggestions would be appreciated.

You're not that far from Lentini Communications in Newington. There's a place in Meriden that does commercial two-way and also sells scanner stuff, but for the life of me I can't remember the name of the place. But Lentini is sure to have it. They aren't far from 91.

Email me for directions if you wish.

The $50-$60 is worth every penny. If your radio is damaged for any reason, they will either fix it our give you a new one (usually a new one). So get some damage from static build up in your antenna and run it in to get a radio upgrade. Since, RS is introducing new models all the time, you are sure to get a new one. I would recommend it to anyone.

Source record: 171607

Whoa. Before you run out and purchase the Relm HS-200, you should realize
that it won't decode that "white noise" you are hearing when your local PD
is using digital encryption.
The HS-200 has a nice feature that allow you to filter out certain
transmissions if local agencies are using DCS (digital coded squelch - also
known as DPL or "digital PL") as well as CTCSS or "PL".
So far, the Relm is the only scanner with this feature but there may be new
products just over the horizon. I'd wait on making a major purchase for
now.
Consider "ham" handhelds (HT's) especially the Yaesu FT-50 RD if scan speed
and
scan versatility isn't a big priority. It has wide band receive but
broadcast FM and TV reception is rather poor.

Now that's interesting Tom, I distinctly remember ordering two FT-11's and a battery holder for my VX1-R. I think the one of us that is in need of growing up will be apparent to others that read this. The reason for posting on the net is to alert others to what I feel is an unethical practice. BTW, do they have spell check where you come from? Steve (AC6FR)

It's good value for money as long as you are not interested in HF.
Like most Scanners, the filters are much much to wide for HF
performance. My recollection is the AM filter is 15Khz. ICOM and AOR
user 12Khz (although there is an optional board, and several published
mods for the AOR8000 to take it to 4Hz). Yupiteru MVT-9000 has a
narrow AM setting which is about 4Khz.

I knew you would see it my way. You never know when a unit will have problems. My experience with any/all electronic equipment is that ity is man made , therfore, can/will fail eventually. The smart buyers always look for warranties to eliminate costs of repairs/replacements in the future. I am sure Uniden has some nice products, but they can't/don't back their products with warranties. There is a reason for that. RS is the way to go.

3991. ??????????????? PRO-67 CELLULAR MODIFICATION ??????????????????????

Newsgroup: rec.radio.scanner

From: scannercenter@hotmail.com
Message-ID: <6b64e2$49q$2@newsmaster.pathcom.com>
Source record: 171626

I recently purchased a Pro-67 Scanner and was wondering if there is a way to modify it to receive cellular phone calls. It is based on the Pro-51 (with Triple Conversion and also other new features) but put in a Pro-26 Case if that helps. I currently can here some by scanning 816.000+ (IF Frequency), but the others are blocked. Listening to cellular is legal where I am so I was just wondering if I could here some of the calls.

Thanks!

(P.S. If you have any other modfifications for the Pro-67, could you please send them to me also.)

[SNIP!]

Of course, being that the EAS system uses an unpopular baud rate for
their data, (600 baud?) it is unlikely that many folks here will be
able to tune into the actual EAS data...

HOWEVER...

Many of the EAS activations (if not all) are transmitted over the
State's EDIS (Emergency Digital Information Services) system which
is receivable with a standard scanner and a Packet TNC. (In fact, I
saw this press release come across EDIS earlier today)

In Northern California (SF Bay Area/Sacto) EDIS can be received on
the UHF frequency of 450.0375 (from Mt. Diablo.)

Two other frequencies I have... I believe on is LA area and the
other up St. Helena way, are 37.38 and 37.02 mhz.

Earlier today, I received a couple of EAS activations from the National
Weather Service via EDIS minutes before the EAS came out over the
broadcast radio... of course, you also can see a lot of advisories
also, which don't get broadcast by the stations until their regular
news reports.

I can't speak of Radio Shack's extended warranty, but every other extended warranty I've read had a clause something like this:

...warranted against DEFECTS in MANUFACTURING or MATERIALS. Defects caused by abuse, accident, misuse, neglegence or an 'act of God' are NOT covered.

And I agree with the others....EVERY piece of electronic equipment (radios, TVs, Computers, Monitors, etc.) that makes it for the first 90 days, makes it practically forever. And those that have failed and been fixed in the first 90 days have lasted forever also.

Example...I'm in the process of selling a shortwave radio I bought new in 1976, it still works just as well as it did then...ZERO repairs. I've got an old Bearcat 100 scanner here, at least 15 years old...still works fine, ZERO repairs. I buy refurbished TVs from Sony...I've got 5 of them here...various sizes, most over 5 years old, all of them, ZERO repairs. The list goes on.

Extended warranties on electronic equipment are not worth the paper they're written on to the consumer...they're worth "gold" to the seller though <grin>.

Whacker,
I would love to know where you are getting product upgrades from for warranty work. If that is how it works at your Radio shack, I'll travel great distances to shop there. It has been my experience that they will only replace w/ the SAME new item or maybe give you a prorated refund if the item is no longer available.

You can't buy all he mentioned for only $40. You missed one of the
books, and another magazine subscription. A one year subscription to
each of the 2 mentioned magazines is $50 alone!! The cost for this AND
the books cost around $90, for which you can buy a REAL NICE used SW
reciever!

I've been trying to get the MOBITEX software up and running here in the UK. I use the discriminator output of my scanner and the Hamcomm interface.

I'm getting some text but a lot of it is either encrypted or they sre sending some sort of binary information. Also I get a lot of CRC errors on some frequencies.

Can anyone give me any advice?

Many thanks,

Pete.

I have to agree with this reply. I have built one of these in kit form and found that sensitivity did not equal an 800mhz capable scanner. I did unscientic before and after tests using pro-2006. Also, I did verify components, mainly the diode mixer, I sent off for new replacement diodes and amplifier transistor thinking maybe they were the culprit..No change....

Try to get a scanner that can be modified if possible..That way you dont have to extra box and all that garb...

Mike

Also, as I believe Bill Cheek mentioned, there is possibility that the local oscillator of one unit may feed into other radio causing interference under certain circumstances. Haven't personally tested this so I don't know if it would be a major problem or not...My guess is that with quality radios you would be ok doing this. Also, If I am correct, I believe that most if not all scanners will terminate the antenna into a 50 ohm load. This will mean that with 2 radios connect to same antenna in this manner, you can expect a 3 db loss of signal or so. Not too noticeable in theory but again, I haven't tried it...

Glad to offer help, (when I can...not too often it seems)

For the same reasons that people demodulate weather faxes and radioteletype for a hobby. Some of this stuff CAN be boring, but it can be interesting and educational as well.

Most of those people who are passionate about ACARS monitoring started as aircraft or airline afficianados and were not necessarily radio hobbyists.

I was both.....

4015. Air One flies again

Newsgroup: rec.radio.scanner
Date: 1998-02-04 00:00:00 UTC
From: NoSpam.n9jig@theramp.net
Message-ID: <NoSpam.n9jig-ya023080000402980540020001@news.theramp.net>
Source record: 171351

the Illinois State Police helicopter "Air-One" will resume its mission of support for law enforcement agencies on Febuary 4th, 1998. The Air-One unit had been in stand down status since a crash last year killed an ISP trooper and a civilian pilot in Frankfort IL. This crash destroyed the main Air-One chopper, and occurred during a practice session in the early morning hours.

Air-One is headquartered at Midway Airport in Chicago, and supports law enforcement in ISP Districts 1,2,Chicago, 5, and 22. It uses various devices including FLIR (Forward looking Infrared) and high power search lights. It has radio capabilities for most agencies in northern IL (CARMA Members are responsible for most freq selection in the Air-One radios, via ScannerMaster and direct assistance).

Air-One usually operates on ISPERN (155.475) when assisting in pursuits or with outside agencies, and 155.460 when conversing with ISP units. It can also be heard on various surveillence freqs as well.

Source record: 171352

Hi group ..

I Would like to get more information on the TV-unit
for the 7100. It fits to the IF-output (10.7MHz)
.. wonder if there exist schematics for this unit .
Maybe I could put one of these together ..

Has anybody tried this ? If there are circuit diagrams
for the unit I would be very happy receiving a copy of it.

Are there cipsets to decode AM-TV-signals from the
10.7 MHz IF ??

Any hint is welcome .. 73s de Klaus

I bought one before christmas at Texas Towers for $1549. After making
all the calls to all the dealers, they were about $200 less than the
next best price, and these prices included that coupon deal from Icom.
At the time I bought mine though, they had only one or two left at that
price.

Brian "Please come back Johnny" Reed wrote:
< ramblings of a love lost dolt snipped >

Poor, poor Brian. Now that Toilet Boy has withdrawn his love and physical affection from you, and redirected his efforts towards gaining the attention of Richard Simmonds, you've become so depressed (tsk tsk). I'm flattered (flattery will get you nowhere) that you've offered yourself to me, but, I must decline. I make it a rule *never* to date out of my species and particularly so far below my place in the food chain. Since you're one of the extremely lower primates, I must decline. I always stay out of lovers quarrels, especially when I know you're just trying to get back at Mackey by trying to capture the attention of someone way above your station in order to make him jealous. It's amusing that you think you could climb above your strata into the ranks of homo sapiens. Such a lack of critical thinking ability and general stupidity is very common in the lower primates. Face it, you're a victim of genetics and circumstance; it's not your fault you were born a moron (is Forrest Gump your mother?). You should stick with Peter Boe, at least between the two of you, there are enough brain cells to spell K-Y Jelly when you go to the store and get lost in house wares.

It's rather obvious that you've fantasized about wrapping your lips around my glorious spigot and drinking the divine essence that would fill your miserable life with meaning. Dreaming is for free, and you can dream all you want. The best you're going to do here is stand on the sidewalk and read the menu. You'll never get into the inner sanctum of humanity. Dolts like you and Toilet Boy are way too low on the food chain to be considered worthy of savoring my sacred elixir.

You know, the Center for Disease Control in Atlanta has put out numerous warnings that syphilitic dementia is beyond epidemic proportions among the lower primates. You should have a very thorough medical and psychological examination at your earliest convenience. You're beginning so show some of the early warning signs. On the other hand, cheer up, if you learn to snivel, whine, and pout as much as Toilet Boy, you might impress him enough that he might take you back.

SM>I'm looking for any and all feedback about this scanner. I've read
SM>N2MCA's review of it, and was quite intrigued, but I like to here
SM>from more people who have used (and abused) it.

I've actually had two of the radios and can give you some feedback.

As far as features go, it is (except for no trunking) the best scanner I've ever had. It has Alpha Display, PL and DPL, 200 channels, computer programming, great audio, and a nice display. Also, it has a separate knob that can be used to put the radio into manual, and then step forward and backward through the channels. The display can be toggled between Alpha and frequency easily. The size is good for mounting in a car.

There are some down sides to it as well. First, the actual receiver could stand some improvement, as the radio is more susceptible to intermod and other spurious signals. A radio with great features should have a great RF section, and this one doesn't. The radio might benefit from a metal case, but I think the problem goes beyond that. My first MS-200 went back to RELM because of this problem and they ended up replacing the radio. The second one is much better, but still not great. It's by far not the worst, but other radios, most notably the BC 760XLT have better RF sections. Second, the display is nice, but should be better illuminated. RELM choose to use a light with a green cast to it, when most other radios use an amber light, which is better for night viewing.

One interesting thing I have noticed, although I have more experimentation to do, is that the choice of antenna seems to make little difference. My original antenna was an AS MONr 52 which seemed to work okay. However, that antenna broke and I have at least temporarily replaced it with a VHF quarter wave which seems to work almost as well on all bands. I am going to fiddle with antenna combinations to see if I can find one that receives well with minimum intermod.

If you have any questions, feel free to E mail me.

>Geocities websites within the last two days?(Feb 1,2)
>It is now Feb 3 and I still can't connect to any websites.
>Is there a problem with Geocities? I never had a problem
>before. Any feedback would be appreciated.

Geocities has BAD PROBLEMS.
They sent me the standard weekly update on my Geo-points, after they
"lost" my webpage. They had reassigned my "address" to another person
who was listed as moving. No trace of my former web page. This has
just happened to a fem freind. I guess geo-cities is worth every
penny you pay for the service. That is nothing. It was rather irksome
to go to the trouble to get the page going, prepare upgrades and have it
jerked for no reason. My fem freind is even more unhappy, I dare
not even mention geo-whatever to her.
The next web page will be a a for "hire" site. I have removed
all geo-cites refferences from my bookmark.
A former Geo-cities "resident".

Sure it "works". But how good? What good is it?
Do you have ANY clue to what frequency is tuned?
Can you get the full spectrum of 868.950 - 894.000
and 823.950 - 849.000? Does anything in the display
mean anything? Do you get 30 kHz steps? Is the
sensitivity up to spec?

> I am NOT sorry that I didnt waste $20 on a book to tell me how to do it...

Cool.

> and it was EASIEST MOD that I could find that the unskilled (NOTICE I SAID
> UNSKILLED) person could do...

Cool. That's why they call it "the VD mod". Venereal diseases
are EASY and don't require any SKILL, either.

> unlike some BOOKS that require extensive electronics knowledge...

Well, it does take some intellect and intelligence to read a
book. Do you have something against books?

> I have gotten over 21 emails thanking me for posting this mod....information
> that they have NOT been able to get elsewhere....without wasting money on a
> book for $20 to get just one mod.....

I wouldn't publish that mod anyway. Or if I ever were to, I'd
put it in a sidebar with a caveat about wearing a condom first.
They don't call 'em "VD" mods fer nuthin, pal.

> I personally feel more than $5 for mod instructions is insane.

That's fine. Tell me what you get for your $5. Where? Who?

> But then again, I do not count on others ignorance to make my living....

Ahhhhh, I guess YOU could say that teachers and professors
count on others' ignorance to make their living, eh?

Why would anyone buy a book unless it were to get something
out of it? And what can you put into a book besides information
and entertainment?

> I am not into this to make money OR SELL BOOKS/MAGAZINES....I believe
> information should be free.

Cool. There is nothing wrong with free information. In your case,
you only GOT that VD mod from someone else and passed it along for
FREE. You didn't develop it. But I'll tell you right now that
Steve Donnell, the guy who did develop it, most assuredly published
that hack in a magazine.....and got paid for it.

Yup, nothing wrong with FREE information, especially when YOU don't
have to work for it, huh?

Hell, dude, gold is free, too. Down in the ground. You go dig it
up and it's yours. But if someone else digs it up for you, he sure
as tootin' ain't going to donate it to you.....especially the likes
of YOU.

> I rest my case >:)

Cool. You made a very profound case, all right.

Can I publish your "case" for more of the world to see?

> Http://www.n-link.com/~friendly

Nice page. Utterly brilliant how you published your confession to
owning and operating

-> "And My 600 Channel CB With MODS"

Is this an example of "intelligence", perhaps? Last I knew,
there were only 40 *legal* CB channels in the USA and Canada.
And CB radio mods *void* the FCC Type Acceptance of the radio,
which makes it extremely illegal to own and operate.

But you CONFESSED right out in public! You remind me of
that Tyler dude who confessed right here in the Newsgroup
to listening to cellular phone calls and to mapping cellular
base sites.

Geezus, man, you 'fessed up to committing a crime, right
there on your web page.

Shooooooooeeeeeey, that's smart, man. When the FCC whacks
you, that will "smart", too.

Nice piece of work, pal.

Okay, scanner folks tune into this one!!
2/04/98
Recently I made an appeal for aluminum
pull tabs. The fourth graders at the elementary
school have received only about 25,000 pull tabs.
They are shooting for one million pull tabs.
Would you collect a few and mail them to the school?
Do not send them any cans because of limited space
at the school. Please send only the pull tabs.
Just twist them off the cans. You people are the
greatest! These students will get to learn what
one million looks like, and they will get to help
someone else since the pull tabs will be donated to
the local Ronald McDonald House for ill children.
Yes, we have checked and the Ronald McDonald House
does want the tabs. In this area that is their
main source of income.
Please send them to:
Mrs. Osbergs Fourth Grade Class
Meadowlark Elementary
497 Morton Drive
Salt Lake City, UT 84116
Many, many thanks for helping these kids do a worthy
cause and to learn a little math along the way.
These fourth graders are really excited about this
project. Please forward this message to your
friends if you can.
Thanks,

Frank

writes:

>Hey, I know where they come from! How about renaming Radio Shack to "lets
rip off consumers to the tune of 400% profit?">

As a PT associate at Radio Shack, I can assure you that a 400% profit is
nowhere to be found ! The margin between retail and wholesale pricing varies,
but is around 13% overall. If you are unhappy with R/S products and services,
you sould not shop there. Remember that they have a LIBERAL return policy
though, you have 30 days to bring it back for a refund, just keep the box and
packing and don't trash the item !

Granted, there are exceptions, batteries are in fact not returnable (at least
at my store). I believe that clearance and 1-of-a-kinds are also not
returnable, but you know that up front. It is unfortunate that you have had a
bad experience with the "shacK', was it just that store, or have you had a
problem at every location ? I have found that most stores are willing to be
helpful, as long as you don't come in acting like an a$$hole. Remember also,
to keep in mind that most of the employees are working at minimum wage.

If you truly want to know the "BEST" of anything, try consulting Consumer
Reports or another independent testing agency for an objective opinion on
almost any product.
(You don't have to subscribe, your local library probably does).

4039. EL panel in 2006

Anyone else catch that action in North Hills on Tuesday? LAFD Air One plucking a girl out of Bull Creek. Scanning at its best! http://www.channel2000.com/news/stories/news-980203-194412.html

Now, on to the mutual aid aspects of Swift Water Rescue. Earlier in the day, there was a report of someone in the LA River near Atwater Village. There has to be a better way to dispatch mutual aid calls. Overhearing Verdugo Dispatch and LAFD Dispatch, there was a tremendous amount of confusion as to what was going on, where to deploy, what resources were authorized. Verdugo Battallion Chiefs seemed a little peeved there was so much confusion, as their units were rolling through their cities (in very bad weather, in very bad traffic) to an unclear situation. As it turned out, it was a *false* report.

Is there a way to simulacast on Mutual Aid White (or any other reserved frequency) so that all the different agencies are getting the same info?

Just a thought...

This particular adjustment is a crosshatch that's
filled with some kind of rubbery goop or covered
with a rubbery layer. Thus a crosshatch won't fit
it well and stands a great chance of stripping the
goop. Then you're S.O.L. So a sharp #3 jeweler's
flat blade penetrates just enough to take a "bite"
and doesn't damage anything.

Maybe in theory.....but not in this actual instance.
I ordered a bunch of those TCXO's from the factory
and ran 'em on the bench for weeks out in the shop
where the ambient temperature swung 30 degrees over
the course of a day. There was a cyclic variation
of the freq, but never more than a few Hz, max to min.

> > Sure can. Same thing as a lissajous on a scope.
>
> Yup! This is a very useful thing. It's also good for aligning the

Wow, no kidding. I used to do that years ago...back
in the days of reel-to-reel decks. I still have a couple
of Sony's and a Teac.

> > No, but the X-301 is a master reference for the PLL,

> > by the PLL is the 3rd one at 48 MHz. But it's okay.

> Noted. But the IF can drift too in which case tweaking up the TCXO
> won't be enough.

I suppose it can drift, but when the 2nd IF is PLL-controlled
48.500 MHz and the 3rd L.O. is a rock-based 48.045 MHz, you can
see where normal quartz drift really isn't going to amount to a
hill of beans.

> > Well, you have to have a known reference, and since the

> the Fref is only 10MHz a small difference, say 40Hz becomes much greater
> at 1GHz. Hmmmm...now that I think of it, the difference won't be much,
> will it?

None. Look at it this way.... the lower threshhold of hearing
is around 16 Hz and the lower end of the audio passband is
roughly 100-200 Hz, BUT......get this.....as the two freqs
(WWV and X-301) get "close", you may not hear the beat note if
its under 100 Hz, but you can SEE it on the S-Meter, not to mention
hear the byproduct of the beat....a higher pitched "tssst, tssst"
until you get closer to where it turns into a "whoosh whoosh"
and finally when you're within a few Hz, the S-Meter actually
peaks and dips because of adding and subtracting of the phases.
And the "whoosh-whoosh" really gets loud.

Seriously, you can get the Reference to within LESS than a Hz
of WWV. Then drift over the course of a day might take it
a few Hz out, but it will sine-wave drift with a regular
zero-crossing twice a day. And then you got it made.

If you suppose there was a 10 Hz error at 10 MHz, it's
only 100 Hz at 100 MHz and 1000 Hz at a GHz, so what the heck?
For scanners, that is well within spec. But.........

But I am saying that the drift is a cyclic one max and min
of only a few Hertz a day and it is possible to phase that
Reference oscillator right on to WWV so that you can see *and*
hear that it's less than a Hertz.

Hard to beat it..... :-)

> > Six of one; half dozen of the other. Very true in PRO-2004's

> not that wonderful. Perhaps replacing with a 1ppm would be a good idea?

I dunno. I doubt it, due to the cost. Besides, the worse
I have ever seen were around 40 Hz off. Most are within
20 Hz, and I've seen a lot of old ones still within 10 Hz.

> > I don't think so. Tune to a NOAA weather broadcast and it's

> this if anyone would like.

So can I.....especially if we're talking TV IF's or other
fairly wide IF's, including FM Broadcast. But it is not the issue
in a scanner.

None of this is worth a furrowed brow, though. It is so
simple of a matter to test it empirically. And, in fact,
the service manual alignment instructions call for "peak"
tuning. Which is righteous and proper for selectivity,
and where 6 kHz to 15 kHz ceramic IF filters are used.

I agree it's a different story for wide passband IF's,
but we're not talking about those.

> As for you, Mackie and others. You should adopt a plan like one of the

>and 823.950 - 849.000? Does anything in the display
>mean anything? Do you get 30 kHz steps? Is the
>sensitivity up to spec?

It will allow them to get the frequencies that they want, it doesn't
really matter how you do it. Also if they are going to search through
the cell freqs it doesn't make a hill of beans to most ppl as to what
frequency you are on...if you find Newt on 869.010 Mhz one day, he
isn't going to be there the next time he calls or probably not even on
the same freq during the duration of the call. As to the steps, yes,
it would be best to get the 30 kHz steps, but the Pro-26 can run
through the 5 kHz steps very comparable to the Pro-43 can with 30 kHz
steps. But here is the monkey wrench. FCC is proposing to try get some
of the radio, cell phone manufacturers to improve on selectivity, etc
so that the FCC can cut the frequency steps in some bands in half.
This would put a world of hurt on most of scannists using today's
equipment. Having cell steps in 15 kHz would prohibit the Pro-43 and
other scanners from receiving half of the frequencies. Then having a
scanner step through with 5 kHz increments would prove more
beneficial.
Another item that would cause some problems is FCC
reallocating the TV channels 60-69 (746-806 MHz) to other services.
It looks like the frequency converters might come in handy down the
road for many scanners since this area might the new home for some
public safety spectrum.

>> I am NOT sorry that I didnt waste $20 on a book to tell me how to do it...
>
I wouldn't waste money on a book just to tell you how to do a mod
either....but you will find that Bill Cheek's book, THE ULTIMATE
SCANNER is a very worthwhile investment. It give you the building

blocks that one can use to incorporate into making mods for numerous scanners. It give you the theory behind it. You can't just take some of the internet mods that you find (i.e. remove R41 resistor) and apply it to all scanners. I have found the book as a valuable resource for many 'extra' mods. Yes, I have taken what I have learned and improved on it and could probably write a few more chapters to add to it. If you are going to only make one VD mod to a Pro-26, then I would suggest not to get the book....simply cause it isn't in there. Bill touches on the VD mod enough that you could get the schematics and figure it out on your own, but there are other toys in the toybox.

>> and it was EASIEST MOD that I could find that the unskilled (NOTICE I SAID
>> UNSKILLED) person could do...

In this ever increasing world of electronics, I hope that someone that was into scanners, radios, etc. would always try increase their knowledge of electronics, computers and programming. Right now I think with the interfacing of computers to scanners, the hobbyists are right neck n' neck with some of the manufacturers...sometimes surpassing them with the different tracking software.

>> unlike some BOOKS that require extensive electronics knowledge...
>
I hope that some ppl would ask 'why' does this work when I jumper this and that. Bill's books doesn't make you have a masters in Electrical Engg...it tells you what you need to know to improve your knowledge. You never design anything new just by reading some instructions from someone else.

>> I have gotten over 21 emails thanking me for posting this mod....information
>> that they have NOT been able to get elsewhere....without wasting money on a
>> book for $20 to get just one mod.....
>

If you are going to do one mod on one scanner in your lifetime, then by all means...save the $20, there is more to the book than that. You don't need to go doggin' on someone just because you don't find that it is worth it to you. You have the option of buying it or not. I find that it is worth the money to have it around.

Source record: 171393

I have new in the box 2006 for sale and an almost new Pro-43. These scanners were the close-out of all the cellular stuff. The 43 was used for a total of about an hour, it hasn't even used the power in it's original batteries.

Asking $450 for each.

email: jcubbage@netobjects.com
650-482-3213

If you live in the bay area you can inspect it first.

I will be taking a cruise on the Regal Empress in August and was wondering
if anyone knew the codes for security, staff, ship-to-land, etc., and I
couldn't find them anywhere on the net and can't think of many more ways
to get them =)

Any help, codes, pointers, whatever are very appreciated.

Thanks,
Jonathan

Well theres one good thing about this modification , in the remote possibility that the fcc were to demand to check a scanner to see if the 800 cel band was there or not the answer would be NO. The blocked part of the 800 band is still blocked out, like the fcc wants it to be.You can buy all the duel conversion scanners you want off the shelf of any electronics store and get the image freqs. all day long and they are legal to have and sell. The mod on the pro26 gives you the best of both worlds, triple conversion receiver and the image freqs. also.

DENNIS in GA.

So you're telling me when a scanner is discounted from $469 to $199,
RS is taking a loss, huh? Perhaps, but I bet not a huge one.

I suspect instead that we were looking at nearly a 2x markup to
start with.

I don't sympathize with the original poster though -- if you don't
like, don't buy!

And the RS return policy does indeed rock.

Wait for things to go on sale and they're often quite reasonable. I
never, ever make a large purchase at RS unless the item is on sale.

>If you truly want to know the "BEST" of anything, try consulting Consumer
>Reports or another independent testing agency for an objective opinion on
>almost any product.

These magazines are pretty good with noteable exceptions. (e.g.
reviews of audio equipment, anything too touchy-feely or technical.)
They rate Bose highly for instance. For run of the mill stuff,
can't be beat.

I bought the admittedly ridiculously expensive N100 Opto filter - measure the FM notch to be at least 35 - 40 dB using the S-meter on an R7100. Also, at least my the VHF low band, there is NO attenuation. Would be interested in knowing if RS version is as good. Anyone actually measure it?

I have a Pro 43 for sale.
It is in good condition and has the cell band mod.
Includes the factory service manual, users manual, a case that is too big,
(it's the case
for the HTX-202) and a telescoping antenna, along with the original antenna.

Apparently something is wrong with my newsreader software because I posted
the price but people still want to know the price. +ACQ-250 (two hundred and
fifty dollars).

OK, new price+ADs- 240

I was hoping that someone here would be able to help me with a small problem I have. I own a Radio Shack PRO-51 scanner and every time I push the buttons, the scanner makes a "beep" sound. I know this is "normal" but at certain times of the day (more so at night) I'd love to NOT hear this annoying beep. Sometimes I listen to the police late at night. Needless to say, my sleeping husband doesn't appreciate the constant "beeping" every time I press the "scan" or "light" button. Is there any way for me to turn the beeping sound off??

Thanks ~ Christine

> purchace??

Bob,
The PRO-67 is a pretty nice little radio. It is made for
Radio Shack by Uniden and seems to have the same receiver
as their new BC235XLT just without any of the TrunkTracking.
I posted a review of it a few months back on my web site.
If interested, try my home page listed below. Follow the
link to radio monitoring then find my table of receivers
and you should see the PRO-67 nearby.
Since you are just getting into the hobby, I would
also recommend checking out my New Scanner User FAQ
listed below.
Happy reading and good luck with your decision!

Piglet..

The OS535 has three versions:
1) Cell-blocked, code enabled.
2) Cell-blocked, not code enabled.
3) Cell unblocked.

These different versions a dependent on the programming of the board's
CPU.
The first version is no longer being sold. It used to be that
you could buy this board and if you had the credentials or FCC
approval then you could get the code that would 'reprogram' the chip
which would allow you to tune the frequencies. You might still get
'remaining stock' of this item, but I don't know where. If the chip
wasn't 'reprogrammed' then the software would act like it was
scanning/searching these frequencies (the software actually was
sending out the right commands) but the CPU would just ignore the data
stream to control the PLL freqs.
The second version doesn't allow a code to be entered to
enable the cell frequencies.
The third version is available for FCC approved or cellular
radiophone technicians. It is unblocked from the get-go and does not
need any code to enable the frequencies.
The CPU of the OS535 is a P87C524EBAA (a quad flat pack
44-pin) microcontroller made by Philips Semiconductor. It is a
derivative of the 80C51 microcontroller family and has the same
instruction set as the 80C51.
Well, I rambled on.....I guess I should have just cut myself
off a long time ago. The enabling/disabling of the cellular
frequencies is in the programming of the CPU. You cannot cut diodes,
resistors, etc to change its coverage.

4090. Mod for european (U)BC120XLT?

Newsgroup: rec.radio.scanner
Date: 1998-02-04 00:00:00 UTC
From: grubekg@t-online.de
Message-ID: <6baji9$5nc$1@news01.btx.dtag.de>
Source record: 171426

Hi!

The european version of the BC120XLT (called UBC120XLT) differs in the low band coverage. On the US version, it's something like 29 to 54 MHz, on the european version it's 66 to 88 MHz.

Is there a modification to switch between these bands?

Mike

If you are hearing the EMWin system, that's a completly different can
of worms. It is an ASCII 1200baud system (I have the parameters set on
my M7000), and while you could get the text cleanly, you need the
programs to actually see all the charts and other stuff that's being
sent. What frequency are you hearing this? 73s Mike ka3jjz@erols.com

Hey Mike, sounds like you have a bad radio! I have not had any problems with the whip antenna, only when using a high gain mag mount in urban areas. I'd have your scanner looked at to be sure. Also check with any Uniden dealers in your area to see if they have had similar complaints.

Craig,

Go to Dejanews and do a search for BC895XLT I/O CODES. This should pull up previous posts by A.Giammiarino who managed to discover most, if not all, of these codes. There you should find everything you need.

That's pretty good Jeff. The NMO callsign is an impressive addition to your list. I neglected to add that while I held KX6LX (your neck of the woods, sorta) I also operated ABK. The reason I didn't add that to the list is because I knew Toilet Boy/Compania wouldn't know a commercial maritime station callsign from a donut.

I couldn't agree more. I know the frequency groups for most of the cell sites near me, allowing me to know the general location of most calls.
Is there other type of cell mod for the PRO-26? What mod was used during the Congressional "hearing" last year?
I've read about a mod for the PRO-43, allowing it to skip over the frequencies for the edge of each band and continue searching. I've also heard that someone has done this on the PRO-60. Could this be possible for the PRO-26?

I've generally been happy with merchandise I've purchased at RS,
however, many of their sales people are less than friendly. They
ususally try to get me to buy more than I need if I'm just in there to
buy small parts. I've encountered these type of problems at many
stores.

Daron,
I would seriously consider a Pro-2006 with the Opto 456 computer board installed or purchase them seperate, would cost $500, in fact I noted a setup here on one of the news groups recently for just under the $500 mark. Good Luck in what ever you do.
Ron
ps: you also need to consider software for the computer control.

First off, I'm John's mother, not his wife. I
don't know any woman out there dumb enough, uh,
I mean with the right qualities for my Johnny boy.

Secondly, why do you people continually harass
my son? He has been institutionalized for over 4
years now. His 3rd breakdown forced us to place
him there. It all ended when he was walking around
in circles muttering something about a "metal
screwdriver".

You all need to understand that John just doesn't know
any better. He has become proficient at showing strong
aggression towards those he truly admires. This is his
way of showing his appreciation. I know it sounds a
little strange, but my son is in a mental home after all.

They treat him nice. He has his own room and his own
box of 64 Crayolas. They paint the walls once a month
for him so he can start over.

So, please, go easy on my retarded son. He just doesn't
know any better.

Ashamedly yours,
Mrs. Mackey

>PROBABLY A HOAX

Sad to say, it isn't. I say "sad", because the postage alone to send the tabs in, would most likely cost more then the redemption value of the tabs. At $0.32/ounce for postage (something like $0.20 per addit ounce) and even if the tabs were redeemable at $1.00 lb, your still on the underside of the curve. It would be better and more beneficial to all involved if you were to take a $5.00 bill, stick it in an envelope with a $0.32 stamp attached and send it off to Ronald MCDonald House.

But yes, if you were to check out som Ronald McDonald House WWW pages, you would see that they do accept the tabs.

>LIKE THE SEND BUSINESS CARDS TO THE BOY DIEING OF CANCER SO HE
>CAN GET INTO THE WORLD BOOK OF RECORDS. TURNS OUT HE HAD ALREADY PASSED
>AWAY AND NEVER HAD ASKED FOR THE BUSINESS CARDS.

Nope. Major error.

Craig Shergold DID not ask for business cards, but he DID ask for "Get Well" cards so that he could be placed in the Guinness Book of World Records. Craig Shergold DID make it into the Guinness Book Of Records. Craig Shergold did NOT die. Craig Shergold is STILL ALIVE. Craig Shergold does NOT want any more cards of any sort. Craig Shergold still gets them though. Guinness no longer allows competition for this sort of "world record" due to all the problems it has caused the Shergold family, "Make a Wish" and other beneficiaries of the "request".

Newt Gingrich once sent the chain letter to other Capitol Hill members, except the name was a mutated form of Craig Shergold (something like Craige Sherwood) and Newt's letter claimed that Craig(e) lived in Newt's district, rather than in the UK, where Craig Shergold lives to this day.

It has been suspected that many of the "business card" mutations with addresses not to Craig Shergold or Make A Wish, are mailing list scammers trying to build a database of addresses from those cards received.

Last I heard, a Make A Wish organization in Atlanta, GA, has to rent a separate warehouse just for the receiving and sorting of the mail they receive from the "Dying Boy" letter.

See www.urbanlegends.com for more information.

>And then again, maybe its for real!

>dealer price?.......$6.00!!!!!!!!!!!!!!!!!!!! If that is not a excessive
>M/U, then what is?

Well. like I said, the average margin is 13 %. You will find some items that are a high mark-up like what you saw. Keep in mind, that the original dealer/wholesale cost may have been higher to begin with. The boys in Ft. Worth lower the dealer cost(s) on some items when they go on discontinued/devalued/clearance. Also, your dealer has the option to set his prices at any level below the retail. He/She could not sell that item for more than $24.95, but could have sold it to you for any amount below. It pays to make the manager your friend !

return policy. I did not know
>that! Does that apply to sale items, such as
scanners?

The policy does apply to sale items, but NOT clearance/one-of-a-kinds/scratch &
dent. Your store manager should be able to tell you for sure. Don't bother
with asking a sales "droid", as they may not know for sure. I myself would
refer you to my manger if you had specific questions on a item, as the policy
can vary from store to store. I understand completely about your phone battery.
There are many items that I feel are overpriced there. Another poster stated
that the regualr prices are high, but if you wait for a sale, you can do pretty
good. I agree completely, especially on scanners. A perfect example is the
Trunktracker scanner that R/S sells. It is identical to the Uniden unit,
except that you can buy the Uniden for $50 less and it comes with 2 batteries
and a charging cradle. The R/S comes with one battery and you have to buy the
charger separately. (But once they out it on sale for $199, it was a great
deal).

I think the problem with that is that some agencies use White-1 as
a secondary and/or fireground freq - regardless of whether or not
there's a mutual aid context 8*(I know LA County used to piss
off a **lot** of neighboring agencies that way.

There are actually three M/A "White" freqs - perhaps they ought to
rethink the rules governing use: say, White-1 is to be used for
interagency calling and (brief) coordination, *interagency*
tactical communications (ie fireground comms) should be moved to
White-2 or -3 as soon as contact is established on White-1.

I am forever amazed that the various fire agencies work together as
well as they do during major incidents such as brush fires. I'm
convinced that that only works because of a) excellent adaptation of
the incident command system and b) the fact that every agency (I know of)
has at least one BC van loaded to the gills with radio equipment of
every size, shape and freq, enabling them to act as an interface
between the participating agencies. As well as this has worked, it's
probably long past time to move to a well thought out, standardized
interagency mutual-aid scheme....

I can't really tell you about that. When I was going to get my
first one, I called several places to check on prices and what ppl
though of them. When I called Durham, the person who answered the
phone give me some great feedback about it, but the price was a bit
more than some places. They went on to tell me that they were no
longer able to get the full coverage boards. I'm not for sure if he
was talking about the factory unblocked units or the code enabled
units. Things also may have changed in the year or so. I got my first
OS535 about 1 year ago.
After calling Optoelectronics and talking with them for a while,
I was informed that there were a few versions of the boards. After
finding out that being FCC certified permitted you to fill out some
paperwork that you could file with Optoelectronics and would allow me
to purchase the unblocked version. Some of the associates at work
kicked out some code which allowed us to use the 2035/OS535 for bench
testing equipment that would have otherwise cost a considerable
amount.
I don't have Durham's 800# available handy, but you might give
them a call and see what the current status is.

Does anyone know how to tell if the data function works? I turned it on and off and don't see any difference.

my return address is minus the "x".

Please help as quickly as you can. I am debating purchasing the Radio Shack Pro-67 for $149 or the Pro-26 for $199. Which way should I go here? Both are on clearance at Radio Shack, and the supply appears quite limited.

Any advise would be GREATLY APPRECIATED.

Thank you!

Bob

"Matt Cornett" <malletboy@bigfoot.com> wrote:
>Can someone tell me what a Trunk Line is? (via E-Mail please)
>
>

trunk line - multiple communication channels
multiplexed onto one baseband signal. As in
a T-1, or T-3 ds0,ds1 line no doubt used by
your ISP to connect to an NAP (network access
point on the NSF backbone). The T-1 is a 'trunk
line'....

since you posted in this group, you must mean
'trunking' ...? same theory - virtual channel
set up dynamically from multiple frequencies.

Do a search in dejanews for a more long winded
explanation. Better yet, go to Moto's web site.
for run down on it.

Bob,

I picked up the PRO-67, and am quite impressed overall. The fast scan rates, 200 memories, and service scan functions are great features. On the downside, the audio is not as good as my PRO-43, and overall construction quality is inferior to the GRE models.

For the clearance price of $149., this radio is a real bargain.

I would recommend checking Rich Wells' Strong Signals page for more details and reviews of both models; it is a terrific resource.

Good Luck & 73,

Tony N8SNC

Compania, or should I say, John Mackey Jr., you are an idiot.
Amateur licenses differ vastly from commercial tv and radio
licenses...
He upgraded once, changed it for a shorter one once, and had a license
in a different part of the country once....
All but the shorter change were absolutely necessary...

Will be in Miami/Key Largo area and have looked into GMRS repeater directory - seems that area has no publicly available repeaters on channels 675 or 700.

Anyone in that area can verify? If you know of someone on these channels please email name and address - would like to get their permission for limite use (< 5 min xmission time per day).

Thank you,

>is the SAME one I have NOW, you FOOL! I have upgraded 5 times & moved
>a few times but always maintained the same callsign. I have not had
>to change my call.

That's because you're a relatively new ham. Back in the days before
you were licensed, when one upgraded from Novice, the FCC would
issue a new call. And when one moved out of his call area,
the FCC would issue a new call. And if one wanted to operate
portable, the FCC would issue a second call (your call sign
was for your fixed station location, as indicated on your license).

So you see, when the other fellow said he began as a Novice with
a WN# call, he *had* to give that up when he upgraded - no choice
in the matter. And when he moved to another call area, he also *had*
to give up that call - no choice in the matter.

You should consider studying a bit of history so you don't flame someone
by mistake.

Jeff KH2PZ

P.S. Where are the scanner articles? So far, today's download contains
less than 50% scanner-related posts.

Bob:

I bought a PRO-26 about a week ago, at the close-out price of: $199.00. With the exception of the audio being somewhat crackly, it did a respectable job. A week later, when the PRO-67 went on sale for: $149.00, I thought I could get essentially the same scanner, only newer, for $50.00 less! Contrary to what others in this newsgroup warned me about... Radio Shack not taking back close-out items, I had no problem returning it for a full refund! I purchased the PRO-67, and I'm glad I made the switch! The controls are laid out better, the display back light is brighter, it has built-in service search for Air, Marine, Fire, and Weather, where the PRO-26 only had Weather, and the audio is much better than the PRO-26!

Bill Crocker

All of the higher-end RS scanners are good...it's just a matter of finding one with the features you want. They all more or less have the same frequency coverage; and triple conversion is a must, especially if you live in a densely-populated area with a lot of RF flyin' around.

None of the new scanners will receive cellphones, nor can they be modified to do so. If you insist on hearing cellphones, get a used PRO2006. Be prepared for sticker shock, though...a used 2006 may cost as much or more than the unit that replaced it. In my area, they go for about $400, assuming you can find one.

Good luck to ye!
Charlie

I agree. I've seen this topic (of what's a "fair price") come up before,
and not just on this NG.

There are certain products where the markup would make you sick: They
charge $0.99 for a pack of 5 resistors that probably cost them less than
a penny each, undoubtedly manufactured in some third-world country. But
big-ticket items, such as computers and scanners, have much smaller
profit margins. A recent Tandy annual report noted that nearly 75% of
their retail revenue comes from purchases totaling less than $20.00. So
while selling you that computer or big-screen TV may yield a hefty
commission for the individual salesperson, Radio Shack as a corporation
would rather you buy a pack of batteries or computer disks.

It does boil down to choices for both the merchant and the buyer: Radio
Shed has the right to charge whatever they want for the stuff they

offer; you as the customer can take your dollars elsewhere if you don't like it. I shop at RS not because they have low prices, but because they are convienient. After all, where else am I going to get a 1N4007 diode at 3:00 on a Sunday afternoon?

4159. Re: Best Scanner for under $500?

Cross-posted to: rec.radio.scanner,alt.radio.scanner

To me the skipped frequency range is an issue.
Why?
Because everyone else has it in a continuous band scanner so why can't I and why doesn't the Bearcat 9000 when
those frequencies are perfectly legal to receive?
Kind of getting a PC which only has 14 IRQ channels instead of 16, don't you think?
I might not need those two missing IRQ's but it sure is nice to know I have them in case.

Go to Radio Shack, purchase there model PRO-2042...
1000 CHANNEL SCANNER
I bought mine for $299.00 (new)
It has many, many bells and whistles
Auto store
Great display
Good audio
Duplicate check
Lock out and Lock out review
10db att
17 pre programmed limits
100 monitor memories
many memory management programs....

For $299 it is well hell of a scanner

Don;t delay !!!!!!!!!1

Regards

Bryan

I dunno dude.....Your "real legit name & ID" isn't exactly a powerhouse of "credibility". Anybody who reads this NG can figure that out in about two or three nights.

No offense,.....really. But every poster you respond to is questioning everything about you. You've been questioned on your expertise, your licensing status, your behaviour; even your lineage and species. questions-questions-questions..

A credible source doesn't get questioned on everything he says. It doesn't even matter that the source had the right answer. They're simply observed being questioned about everything they say or do.

So....you use your "real legit name & ID" and from the questioning I can see....you're a virtual "Anti-Christ of Credibility". I can't see where your "real legit name & ID" is helping you.

4166. Honolulu International Airport frequencies

Newsgroup: rec.radio.scanner

Hi Gang,
I'll be soon receiving an aircraft-capable scanner. I'd like the
Honolulu Int'l Airport tower frequencies for inbound and outbound
aircraft, and ground control, plus anything else that might be
of interest.

If the above frequencies are not simplex (both tower and aircraft),
could you please provide the tower and mobile frequencies?

Thank-you in advance!
Jeff KH2PZ

Body handling: HTML body converted to readable text

900 MHz won't help either. If you listen for any trunked systems in mid-to-high
800 MHz Range you can hear "900 MHz" Cordless phones.

4171. Re: EL panel in 2006

Newsgroup: rec.radio.scanner
Date: 1998-02-05 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <6bb9nl$qbf@HOPPER.ACM.ORG>
Source record: 171433

gregg@plains.nodak.edu (Joe Gregg) asked:
> How much trouble is it to replace the EL panel in a 2006?

Only two simple solder points, but a moderate amount of disassembly:
remove bottom & top (note speaker wires); disconnect front panel (unplug
wires top & bottom); remove front panel; remove logic board from front;
unsolder two leads to the ELP; remove dab of glue; slide ELP out of
display assembly; insert new ELP; re-assemble.
Note that disconnecting CN3 (15 wire cable) pulls battery voltage from
the logic board and memory may be lost. Record all programmed channels before
starting or leave CN3 connected and try to work around it.

> Also, any idea how much it costs?

Order part no. LB-0040 from: Tandy National Parts (800) 442-2425
It was $29.69 last September (it had been $12 two years ago).

: writes:

: >Hey, I know where they come from! How about renaming Radio Shack to "lets
: rip off consumers to the tune of 400% profit?">

: As a PT associate at Radio Shack, I can assure you that a 400% profit is
: nowhere to be found ! The margin between retail and wholesale pricing varies,
: but is around 13% overall. If you are unhappy with R/S products and services,
: you sould not shop there. Remember that they have a LIBERAL return policy
: though, you have 30 days to bring it back for a refund, just keep the box and
: packing and don't trash the item !

: Granted, there are exceptions, batteries are in fact not returnable (at least
: at my store). I believe that clearance and 1-of-a-kinds are also not
: returnable, but you know that up front. It is unfortunate that you have had a
: bad experience with the "shacK', was it just that store, or have you had a
: problem at every location ? I have found that most stores are willing to be
: helpful, as long as you don't come in acting like an a$$hole. Remember also,
: to keep in mind that most of the employees are working at minimum wage.

: If you truly want to know the "BEST" of anything, try consulting Consumer
: Reports or another independent testing agency for an objective opinion on
: almost any product.
: (You don't have to subscribe, your local library probably does).

A while ago, I saw the store (dealer) price for a $24.95 item(retail).
The dealer price?.......$6.00!!!!!!!!!!!!!!!!!!!!
If that is not a excessive M/U, then what is?

Well - are you looking for something that could be portable, like a handheld? Or are you looking more for a base unit?

I have owned (at one time or another) 2 radio shack handhelds, a radio shack base model and a uniden bearcat. I liked the Bearcat (9000xlt) because of the easy to use layout of the controls and it has good audio/ decent squelch.

If you want a base unit - look at a BC890 or BC895.

For hand helds I have not used the uniden radios, but radio shack just dropped the price of one of their 200 channel 800Mhz handheld radios to a mere $169! Thats over $100 off the original price.

just my thoughts.

The part numbers are the same. The parts are the same.

The in-house RS number is CX0480.

4178. Cheap Cellphone Recevers?

Newsgroup: rec.radio.scanner
Date: 1998-02-05 00:00:00 UTC
From: "Heavy Breather"@The
Message-ID: <34df46a7.71669825@news.wworld.com>
Source record: 171440

When I attended a local Hamfest/swapmeet a surprising statement was made. The individual stated you only needed a btoken cellphone to intercept cell calls. His logic was that most discarded cell phones only have blown final transistors. It is possible to get these for as low as 5-10 at swapmeets. You want a brand that allows reprograming from tthe keypad. Place it in the test mode and scan if available. It may require a litle time and effort but a 10.00 invesment is better than 200-300. I wondered if this would work. If anyone has any ideas please post them.

Charlie,

No, you will never see any commercial scanner that can decrypt
Motorola encrypted digital voice of whatever flavor. Aside from the
legal issues involved. you just are not going to be able to unscramble
it without the key. Not in real-time anyway. And that's a requirement
for a marketable consumer oriented scanner.

To get a continuous receiver like that, you're
really
not going to find it in a scanner. For something
good it'll cost you more than that to get a
high-end
ICOM receiver, or something comparable that has
continuous
coverage up into the gigahertz, etc. What would you
want to listen to between 512-800Mhz anyway?

But it does matter! They won't be getting any "frequencies".
Not unless you call 340.9125 a "frequency". All they get is
a conversation that can't be followed and can't really be
returned to. If that's good enough, then cool. But lest
some be disillusioned, it is best the TRUTH be told about
the "VD" mod.

> Also if they are going to search through
> the cell freqs it doesn't make a hill of beans to most ppl as to what
> frequency you are on...

Surely you jest? The patterning of a cell system is
one of the more lucrative aspects of "doing cellular".

> if you find Newt on 869.010 Mhz one day, he
> isn't going to be there the next time he calls or probably not even on
> the same freq during the duration of the call.

But that's not relevant. And it's a given. Thing is, if you know
the patterns of your cells, then you can follow a handoff. Not so
easily with the "VD" mod.....

> As to the steps, yes, it would be best to get the 30 kHz steps,

It's really the only way to fly.

> but the Pro-26 can run
> through the 5 kHz steps very comparable to the Pro-43 can with 30 kHz

> other scanners from receiving half of the frequencies. Then having a
> scanner step through with 5 kHz increments would prove more
> beneficial.

By the time that comes down, there won't be any analog cellular left.
It's all going PCS and CDMA.

The truth of anything is best told, even if it chaps
some people's hides. Truth is, I suppose the VD mod
will entertain some people. None should get their
hopes up that it is a real "cellular mod" because it
isn't. Not even close.

By his OWN admission, he has had SEVERAL different callsigns!

> How many
> different calls did you get when you were going up through the ranks,
> Johnny boy? Can you even remember?

Since my Novice license 15 years ago, I have had only ONE callsign which
is the SAME one I have NOW, you FOOL! I have upgraded 5 times & moved
a few times but always maintained the same callsign. I have not had
to change my call.

> You know, its louts like you that have caused me to shy away from even
> attempting to upgrade from the "no-code" tech than I am.

Good, I doubt you could do it.

> you are the best example of what is wrong with amateur radio

MANY people have said that about YOU Eric. You are on level with
Drew Durrigan, K1MAN, & others.

> People are best known by their actions

YES, & your actions have spoken LOUD & clear. THAT is why you have
such a poor reputation.

That's YOUR opinion, I certainly DON'T see people rushing to your
defense, rather you have been flamed from a few directions. Face it,
you raised your flag & NO ONE saluted!

> If you had .00001 of the education that you claim to have, you would
> find it as distressing as I do.

Again, this is YOUR opinion. What you are saying here is that everyone
must see things as you do or else there is something wrong with them.
Sorry, but that is NOT how things function in a Democratic society.

> In engineering clear communication is an ABSOLUTE.

True, but we weren't speaking in engineering cirles now were we (despite
what Bill Cheek may dream about). THis newsgroup is hardly
"engineering",
& the majority of the users are not going to be speaking like engineers.
Most people here are average lay people just wanting to use their
scanner
& looking for some helpful tips. Look at it this way, if you go to the
Doctor's office for an exam, you want him to speak fairly normal to you,
& not speak in terminology that only a 4th year medical student would
understand.

> This most likely means that I will have
> to leave this NewsGroup as the swine seems to be the only topic of
> conversation around here.

Your BITCHING makes you look even MORE like a pompus ass!

and
>packing and don't trash the item !

This was NOT meant to be a flame againt the employees of Radio Shack at all.
I have always found them helpful and pretty knowledgable, the problem is
the pricing of "some" items. I needed a battery for my cordless and they
had one alright...to the tune of 25 bucks. Found the same thing at WalMart
for just over six bucks. And I know they sell a service. Sometimes we all
go there, but after being gouged time after time on consistently high prices
I HAVE chosen to not go there. But I do appreciate the info on the liberal
return policy. I did not know that! Does that apply to sale items, such as
scanners?

> Hi,is it possible to decode 1200 baud packet with a scanner and a
> Hamcom interface?

If it's BELL202 protocol (AFSK) - then YES. Otherwise (BPSK, ...) you
need in spetial driver.
If it's FSK - I think - NO, unpossible.

> The frequency is in the 400 MHz range.
> I have seen a Packet Monitor program but is for HF/VHF,
> it did not work for me?

Frequency not importent. Importent only protocol. Try VHF/1200 version.

> Any info would be greatly appreciated!

Also you can try find TFPCL - it's HAMCOM -> WA8DED driver for monitoring
HF/VHF packet.

Yes it is possible to decode 1200 baud packet with a scanner and a HAMCOM interface BUT only if it is the AIX.25 protocol. What you are hearing in the 400 MHz band is packet but most likely not AIX.25. Now in saying this there are text paging systems in that band that can be decoded by some of the new TNCs that support the POCSAG (sic) paging protocol and there are Motorola Mobile Data Terminals which use the MDT4800 protocol. The transmissions sound like packet but are transmitted at 4800 baud. Check in the back of publications such as U.S Scanner News and Popular Communciations for gear to decode these messages.

What you're saying doesn't seen to be the case here.
I've been looking for a 2000 series scanner for a friend.
I can't find a price that's lower than $245 (and that
was for a 2004). I felt that I could find one for $200.
That hasn't been the case so far. If you know a source
for $200 2006s--let me know.

Anyone have the tones for activation and de activation of the BNSF
railroad PBX network.
Also any
BNSF freq's would be appr.

Thanks
Scott

E-Mail would work

Once again Bill Cheek has NO REAL facts to support his accusations,
therefore they are LIES. He is not enough of a man to admit this.
So he tries a sneaky shuffle to change the topic & inject humor,
in order to side step the question & avoid responsibility.

How pathetic Bill Cheek is.

Here you go, Toilet Boy. You won't even have to look it up. You made
your empty threats over a year ago. So far, you haven't done anything
to anyone remotely resembling a computer attack (you lack the skills).
The moronic ramblings that dribble off your keyboard don't count.

Remember that reference to Ozymandias? If you really had a college
education, you'd know it. Hint: it's from Freshman English. But,
since you never finished high school let alone went to college, it's
easy to see why you can't handle this challenge.

As usual, you lied, AGAIN, Toilet Boy. You should find another source
to drink from. Drinking out of a toilet filled with blue Vanish can
interfere with the proper chemical absorption of prozac in your body.

If the fellow in question was legally licenced by the Fcc to carry this radio, or was a licenced amuter radio operator, he could legally sue the ASS off Disney for violating his civil rights, malicious persecution,and so on. An Fcc licence supercedes any state or local or Private propertey laws. If this fellow had whipped out his Fcc licence on these clowns, It probably would have solved his problem right there.
Example: I live in NYC, and have been a legally licenced ham for the past year and a half. I occasionally carry my 2m ht or scanner, or BOTH on my body, along with my wallet sized Fcc licence. A few months ago, I took a tour of the Museum Of Modern Art, With my scanner descretely under my coat, wearing a one peice earphone. One of the security men spotted this, and before I knew it, I was swarmed by about 5or6 0f these trained gorrillas, demanding to know what I was packing. I Cheerfully showed them my scanner, along with my Ham Licence. After much grumbling amongst themselves, they reluctantly let me go my merry way without any further harrassment. I'm not trying to be smug or arrogant here, but next time, if you are travelling Anywhere with an ht or scanner, Take your Fcc licence(or a copy) with you in your wallet. It may not help,but anyone with half a brain will think twice before harrassing you.

I'm one of those people who isn't too crazy on NiMh batteries. If you use them
and run them flat you won't get nearly as much cycle-life out of them as you
do with NiCads. Sure, they have more capacity but my radios go all day and night
with regular NiCads anyway. I have one of these "slim" NiCad batteries for my
Motorola flip phone. It's been cycled at least 1000 times and still going
strong.

>

As a Former Tandy Land employee, the "mark up" at the Company Store end might only be 13% or whatever. However, the overall corporate mark up is a lot higher thus leading to the statement in their annual report.

To illustrate the importance Tandy Land management placed upon moving the small items during the time period I work there, I was working with a customer selling a computer
system, another customer walks in, rudely interrupts me, asks for a package of
$.99 connectors. I take him back show him where they are and leave him to return
to my original customer. About 5 minutes later, the second customer walks up to
me and my original customer, using a string profane words threatens to beat me
me up because I am not serving his needs over the original customers. This persons
actions alarmed all the customers in the store at that time. Several left, I asked the
person to leave, or I would call the police. He left knocking another customer into
a display cussing and acting in a disorderly manner. My original customer left during
the ruckas as well. I was verbally repremanded by the Manager, who in turn was
verbally repremanded by the District Manager, who was in turn repremanded by the Regional Manager, etc. after the disorderly parson called Fort Worth to complain.
In nutshell I was told to serve the small part customers needs as they were the "bread

and butter" of the company.

From: Bryan <bryan@bc.cybernex.net>
Message-ID: <6bghkf$nf8$1@news.cybernex.net>
Source record: 171192

After looking at what the PRO-67 offers and knowing what the PRO-26 offers....
It isn't a hard decision.

THE PRO-26 BY FAR!!!!!

The Pro-26 has everything the PRO-67 has an more:

Three modes: AM, FM,WFM
Three steps: 5, 12.5, 25
Lock-out review! (very important)
10db attenuator
25-1300 mhz (No Gaps-less cellular) coverage alot of coverage for a handheld!!!
Includes coverage 88.3 to 107.5 (Your fm radio stations - not bad!!!)
(1) button weather channel
Auto Store
Sort
Very sensitive radio....
(10) preprogrammed limits
Good display with large numbers
Audio is not the greatest, but for $9 RS sells a nice set of monorul headset - Excellent audio!

All in all the PRO 26 for the money is the winner....

Let me know what you decide!

Bryan

While Federal Pre-emption of state or local laws concerning amateur radio operators is an ongoing debate, I can shed a little light on private property. Private property is just that: PRIVATE. I have the right to set conditions for entry to my property, and to expel anyone I wish if they don't comply.

For example, many business post signs that carrying firearms is prohibited on their property. Even if you are legally licensed as a private citizen to carry a firearm, you have no right to carry on this person's property. Unless you're a cop.

When doing a lon/lat radius search of 3 miles the search hung. Switching the radius to 2.5 produced results. YMMV.

Also, in a long results list, instead of just clicking the callsign, open the callsign in a new window. This will save lots of time since it doesn't have to re-read in the results page from cache or directly when you back up. You can keep both windows side by side and just type the callsign of interest over the previous callsign at the end of the url of the second window.

Good luck,

```

ERRORS IN PRO-43 SERVICE MANUAL

Holy Hannah! I recently had a PRO-43 on my bench for repair. Seems the owner got in a panic to reverse the cellular mod. He dutifully moved D3 back to D4 and all should have been well. It wasn't.

No sound. Eventually I determined the problem to be a probable accident on his part where C-337 was missing. I overlooked it for quite a while because the spot "looked" like a smear of solder resin left over from the assembly line.

Drawing blank after blank, I kept going back to that spot and finally put it under a microscope where I saw sharp indents in the solder pads where something had once been there. The lower photo on page 22 of the Service Manual shows that R337 goes there.

A quick review of the schematic diagram showed no good reason for my client to remove R337 so I soldered in the proper 47-k SMT resistor and reassembled the unit. Still no sound. Yo?

I drew more blanks after blanks as I searched for what else could be the problem, but I kept coming back to that R337. You get kind of psychic after you've been in this business for a while.

The more I looked and the more I compared that part of the pictorial in the Service Manual to the schematic diagram, something just didn't add up.

You can clearly see on the photo that R337 is shown connected to the base of Q305. But on the schematic, R337 is in an entirely different circuit. Say what?

So I tore down my trusty PRO-43; took a look in that area, and saw not a resistor, but a capacitor! To make a long story short, I did more comparing of the manual's photos and schematic to the two PRO-43's, and found two fatal errors in the manual photos on page 22.

What is shown as R337 is really C337. When I replaced my new 47-k SMT resistor with the correct 0.015-uF SMT capacitor, the problem was resolved! In the process, I also found that what is shown as R338 in that same area really should be C338! Two typo errors in less than a square inch of a photo in the PRO-43 Service Manual. How many more errors are there?

I dunno, but let's correct the two that I did find. Note the picture in this article and note the two components, C337 and C338. These are corrected as shown, but in the manual, they're R337 and R338. Make pen & ink corrections to your manual now so that you can avoid confusion later. If you don't have a PRO-43 manual and even if you don't have a PRO-43, make this information known to the scanner people in your community.

Chances are you won't ever encounter these errors in the PRO-43 Service Manual because there is little to modify and nothing to normally go wrong. Somehow my client must have slipped a screwdriver and dislodged that C337, but this is a most unlikely occurrence.

For the sake of clarity, my photo in this article shows nearby resistors R344 and R345 and the preamplifier transistor, Q305. Also shown is C341, the bypass capacitor that can be removed to make received audio crisper and clearer. See the World Scanner Report, V6N3, for details of this mod and detailed disassembly instructions.

In a word, these errors mean little until you rely on the manual. In my case, the errors resulted in a couple extra hours to my bench time. Not fun. But that's life when you romp around inside these newfangled scanning machines.

hi
you may want to take the radio apart if you are able to do so
and inspect the rubber button on the back side and you can use some mild soapy
water to wash it offsince oil from your hand works its way into the buttons and
creates a goo on the underside of the buttons
after doing that take a pencil eraser and clean the contacts where the buttons
rest upon
i have also seen another problem with this scanner when the batteries go badand
the batteries leak the acid out it eats up the traces where the buttons contact
and when that happens you have to solder new traces on the board if you cant
get it repaired let me know as i work on radio scanners on the side and may be
able to repair it for you depending on the extent of the problem
e mail me and let me know if any of this info was helpful to you

jim

Hi!

I've just traded my UBC3000XLT for a UBC9000XLT duh to that i didn't use it that much out and you know about the ni-cad thing ;) Homever, i gotted VERY suprissed when i plugged the UBC9000XLT in. I've got ALOT of intermod-problems wich wasn't even there with the UBC3000XLT which is handheld compared to this base-station. Should it realy be this way? I got ALOT of intermod-problems in 67-80mhz range and in the 168mhz suroundings, biggest problem is some pager-system. What i DON'T understund is why i have the problems now and not with the handheld which handled this FINE without ANY problems at all nealy... WHY? Is the UBC9000XLT so "crappy" or what? (it's a base-station after all). Please DO email me (and answer the group as well) if you have any comments on this...

I've heard of people pleading for aluminum pull tabs
for charitable purposes before....

It just befuddles me how Aluminum Pull-Tabs can be
turned into cash, even for charitable purposes. Their only
value, it would seem to me, would be their scap aluminum
value, which is certainly minimal for just the pull tab.

A long, long time ago, when pull tabs didn't stay on
the can after being pulled, there might have been some
incentive program for turning in the pull tabs,
sponsored by some environmentally conscious organization
who would was concerned about all the pull tabs laying
around on the ground in those days.

But how do pull tabs translate into cash these days?

But I do like the idea of teaching kids what a million of
something looks like..

Hello again,

Several clients and associates have suggest that we should offer periodic equipment specials.

We will start by offering a few equipment packages, starting with the OSC-5000. The unit is fairly popular for low threat sweeps, and does a good job of detecting the low cost spy shop eavesdropping devices.

The unit works well for a quick check of the spectrum, and for instances where a protective agency can only transport a "carry-on" piece of luggage.

OSC-5000 Omni-Spectral Correlator (OSCOR) w/SDM-42 SDU
Special Limited Time Equipment Offering

Buy an OSC-5000 Deluxe System from Granite Island Group
for only $15,850 and get the SDM-42 External Spectrum
Display Monitor and IF Output at no charge (a $1,635 value).
(This offer expires at midnight on March 1, 1998)

Further information may be found via our web site.

This is exactly the same experience I had when I got my UBC9000.
Intermod is a much bigger problem on this compared to the UBC3000.

On the UBC9000 I cannot turn off CTCSS without getting severe
intermod problems. On the UBC3000, that does not have CTCSS at all, I
have virtually no problems on the frequencies I usually scan.

In my experience the UBC3000 is extremely good at rejecting intermod
in the VHF hi band. It's even better than the Realistic PRO-2006
in this respect. So in some respect you can say that it's not the UBC9000
that is bad but the UBC3000 that is very good. But the UBC9000 is not
a top performer RF wise.

Intermod differs alot depending on your location and the antenna you
use. Many people therefore will claim, that the UBC9000 is an excellent
radio, which it is certainly not RF wise. Living as I do near several
FM, TV and land mobile transmitters and using a professional made
antenna for 160 MHz really puts a demand on the equipment. Without
additional filtering, no scanner performs well here.

Regards
Per

Well, I agree to a point about RS being a rip-off. Some things there are and some things aren't. However, I can't see why anyone still uses Ni-CDs when Nickel-Metal Hydrdides put out the full current of an alkaline, get 200% more charges in the usable lifespan over Ni-CDs and to top it off, have NO memory problem either. They are worth every penny.

Also, to set the record straight, Radio Shack averagws a 50% profit margin. I am a former employee and have seen the cost sheets. I am also a shareholder and have seen the quarterly reprts. YES, they have some bad products, YES they have some rip-offs, however they also have some excellent products, and any broad generalization is always a bad thig. No matter what you are generalizing.

On tyhe subject of product being marked down after being discontinued, well insurance pays the whole loss and they just want to get rid of old products so they have room for new ones.

Just my 2 cents worth.

OK, y'all, so Disney is being a bunch of jerks about scanners. Remember this, however. They have posted rules governing in-park behavior. Scanners are clearly listed as banned for security reasons. Also, it's freaking PRIVATE PROPERTY, and as such, their word IS law there as long as it does not contradict a current law within the local area.

As an additional hint, yes wear the earpiece if you must, but security looks for one-ear types and pretty much ignores the walkman styles. If you need an adaptor for stereo to mono, or for 3/32 to 1/8, well we all know where the local R/S is, RIGHT? Ha ha. They have all the oddball stuff when noone else does.

Just my two cents worth.

4286. MVT 9000 Question

Newsgroup: rec.radio.scanner
Date: 1998-02-06 00:00:00 UTC
From: barry@bf.u-net.com
Message-ID: <34db9c2d.210697@news.u-net.com>
Source record: 171229

I`m new to this hobby and recently bought a MVT 9000.

The instructions indicate that by pressing the search key the scanner will look for an active frequency.

However, my scanner just go`s to the next step and stops. Eg. if my step is set to 500Hz the scanner just go`s up 500Hz and stops even though there is no activity on this frequency.

I expected the scanner to search for an active frequency and then stopping on this, could someone please advise if there is a fault.

Thanks

Barry

Recently a friend and I visited the Walt Disney World resort in Orlando. My friend has a motorola commercial two way radio that he had programmed up for Disney's 800Mhz radio system. The transmit was disabled so that the radio acted only as a scanner. My friend was walking around Pleasure Island while monitoring security ops on his radio. Apparently a security host observed him listening to Disney, and he was surrounde by about 6 security guards, and a off duty deputy sheriff. They advised my fiend that he was not allowed to listen to them, and stated it was a security breach. After publiclly embarassing my friend, and detaining him for over 30 minutes they issued him a treaspass warning, and he can never come back to any part of Disney again. Is this right? Aren;t the airwaves public? Just a word to the wise, if your going to be visiting the Disney Resorts make sure you conceal your scanner, or better yet leave it in your hotel room. My suggestion is that if your going to bring your scanner in to Disney keep it concealed and wear a earpiece.

>Subject: BC700A
>From: "Tom Peanteau" <tomp@gte.net>
>Anyone have any information on this scanner? Mods, etc?

What is the date code of the BC700A.... If prior to Mar 94 then you have a chance at the cell mod. Below is a re-post of what I found on this newsgroup about the BC700A.

UNIDEN BC-700A "800 MHZ" SCANNER

Hits:

+ Compact attractive base/mobile scanner.
+ Wide frequency coverage
+ Pre-programmed POLICE, FIRE, etc. bands.
+ Nice backlit LCD.
+ Fast "Turbo" scan (up to 100 channels per second)

Misses:

- No direct frequency entry.
- Search bands are fixed.
- 12.5K steps in the 800 MHZ band.
- The 50 or so programmable channels are scattered in various bands.

Heartland USA (800-229-2901) sells refurbished units for $129.

At that price this is an attractive unit to have as a second or "kitchen" scanner. The audio is strong and clear and it is a lot of fun scanning various services by just the one button. Using just the included BNC telescope antenna I didn't notice any lack of sensitivity for listening to signals at various frequencies.

On the down side there's a fair amount of imaging and intermod. Not a real complaint as I assume that's par for the course for scanners with this kind of range. If you want real scanner that's what God (I mean Icom) created the R7000 for.

I recently bought one and seeing as it advertises itself as an 800 MHZ scanner it was disapointing to find a gap at 870-890 in the coverage. Fortunately there is a mod to solve this that I have included below.

All in all I am pleased with the unit. I really wish it had programmable band edges for search mode and some lockouts but I find myself using it a lot. With the preprogrammed bands like POLICE I am hearing a lot of interesting calls that I otherwise would not have thought to program in the scanner.

CELLULAR RESTORATION:
(Modified from Brett Miller N7OLQ's original)

1. Remove the screws holding the case halves; separate them using care to unplug the speaker lead.

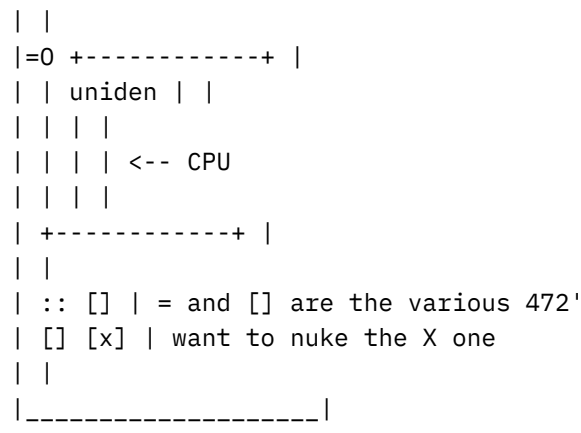
2. Turn the scanner upside-down with the face away from you.

3. Remove the two side screws holding the faceplate; tilt it forward.

4. Find the transparent cable. Using a jewelers screwdriver; CAREFULLY pry up and unplug the cable so that the faceplat can be tilted fully forward. Or alternately take out the black cable and tilt it the other way.

5. Locate the copper/plastic shield under the faceplate; unsolder and remove it.

6. Remove the resistor marked "472". There are 3 of these near the CPU. You want the "middle" one.



In removing it usually you can touch both sides of the chip with a soldering iron and have it lift up by being stuck to the tip of the iron. Be carful not to apply any force to have it lift the etch.

7. This completes the modification. Plug the cable back in place
and test the scanner by entering 870.000 (channel spacing will be 12.5 kHz; not 30 kHz.

8. Reassemble the scanner. Be sure to tack the copper shield down again. I am sure you don't want any more internally generated EMI.

Happy Scanning...
FYI - I monitor the following:
Pro2004, Pro2032, Pro39, BC2500XLT, BC700A

>would have to go to another store. (or order from R/S Unlimited)
>This came from R/S Head office, so it is safe to assume (not label)
>this as true.

First, this is VERY old news (months are an eternity on the Internet).

Second, Radio Shack's excuse that the FCC made them do it is completely
false. It was Uniden's suggestion, and the FCC made no request one way or
the other. Radio Shack jumped with both feet, while Uniden didn't even
follow their own suggestion. Now Radio Shack looks stupid and has ticked
off a lot of customers, so they're blaming it all on the Feds.

Have you wanted to alter the function of the dimmer switch on your Pro 2006
?

Well here's how to do it: (This mod allow you so turn off the display
light when you depress the dimmer switch)

First: Remove the case of the radio, top and bottom.
The mod is done on the front board. (PC Board PC3 - The board that the
keypad is on.)

Second: Remove all solder connections for the shield overtop of the back
of the board and remove shield. Remove the screws holding the PC3
board in place and the front screws holding the Volume and Squelch knobs
in place. (Small needle nose pliers work well for this.)

Once you get the radio disassembled so you can see work on the PC3
board itself, you can start the mod.

All that is required is to remove 1 small component. See diagram below:

Each component is indicated with a ####. Be sure to remove the * * *
component.

####

*
* <++++++ Remove this one only !!
* (Ensure there is no connection
between the top and bottom
contact of the component.

Removing it works best)
#

% % %%
% % %% Rear solder points for Volume and Squelch
% % %% pots.

Bottom of the PC3 board

(Sorry for the poor diagram ... but its accurate enough to do the mod.)

Once you can find the solder points for the volume and squelch pots (at the
bottom of the board) you should have no problem finding the item to be
removed.

Remember to be VERYcareful before removing any components .... make sure
you are removing the right one.

The author assumes no responsibility for this mod. If you are unsure have someone who is experienced in doing mods perform this mod.

Once the mod is done resolder the shield in place and put all the screws back in.

This mod will take less than 1 hour but it is well worth it.

I have also modified my Pro 2004 using a similar method.

Have fun scanning !

Forget Nicads, get some AA NiMH batteries, which come in 1.2 mAh capacity,
and cost virtually the same as NiCad batteries.

I'd recommend that anyone wanting NiMH batteries should check out:
http://www.batterystation.com/

They have good prices on batteries, their service is alittle slow
if they're out on the road doing a show but they _DO_ deliver
the product eventually....the prices are worth the wait.
They have battery packs for ham HTs and cellphones too.

: Well, good luck getting that much. I paid $220 for my pro-43 and $275
: for my 2006.

And I paid $200 each for two 2006s, and $175 for a 43. The lower prices are available, if a person is willing to wait a while.

The scanners are becoming less interesting to a lot of people, as more and more cellular phone providers convert to digital service.

The same thing is happening in the public service bands. Expect all of them to be converted to digital service within a decade.

Karl asked...

> Is there a way to simulacast on Mutual Aid White (or any other reserved
> frequency) so that all the different agencies are getting the same info?

OES does not want us to simulcast (or dispatch) on White 1. We, like many
others
are awaiting word from Sacto, while they in-turn await word on spectrum
re-farming, while
all of us look eastward for $. Those radios and the system to support them
aren't cheap!

Yes, the powers that be are aware of the problems and meet regularly to
deal with them.

There is no question about Mackey's lineage and species.

He's descended from a long line of dung-eating lizards
as a regressive, repressive, reprehensible reprobate.

There is no lower of a life-form than His Imbecilic
Idiocy Mackey.

Look at it this way, the miserable wretch has a
cleft palate, a harelip, a two-inch overbite, and
buckteeth with a gap between 'em so wide you could
drive a truck betwixt 'em.

Not only that, but the idiot loves to show off in
front of people by sucking a tennis ball through a
garden hose. Some people say he can suck-start a
Harley Davidson motorcycle.

I personally saw him suck the chrome off a trailer
hitch once. And now I hear he's working on sucking
a basketball inside out thrugh the filler valve.

Now do you understand?

You need to connect it to a computer and use some
simple software described at and available from:

http://hruska.home.mindspring.com/pro-prog.html

There ya go!

Alas and alack, the VD mod voids the "certification"
of the receiver, just like "Type Acceptance" is voided
when mods are done to a transmitter.

So there is no inherent safety and security in the
VD mod. Like I said....I resembles a venereal disease
in more ways than one.

A communications service monitor is used for alignment and calibration of
transmitters and would probably be too large to use as a "bug detector."

>But for price comparison purposes ICOM makes a general coverage receiver
>with a built in spectrum display for right around 3000 dollars and they

Holy mackerel that's expensive. I do happen to be one, and I have an old
Icom IC-32 dual-band handheld about the size of a brick. Two radio
technicians I know swear that it's the finest dual-bander ever made.

>On the other hand certain passive eavesdropping technologies have gotten

Information Unlimited has a web site at http://www.amazing1.com/index.html
and they seem to have some great stuff (also some junk). $149.50 for the
laser system in kit form - pretty good I guess.

>Like any technical field you almost have to be exposed to it constantly to

>
> - Harold

An R-11 is great but it WON'T do the same things at the same level of
detail and control as an OSC-5000.

The OSC-5000 is worth what they charge, and does what it's designed to do,
very well. The same is true for the R-11, but they aren't designed to do
the same things! Saying that a Opto R-11 will do the same job is like
saying a cow can replace a car (or compairing apples to oranges).

It isn't nice or fair to slam James for offering a good deal to the group,
I for one have found his advice to be very helpful in the past.

No, the law does not contradict that at all.
The portion of the law you are probably referring to involves devices
intended primarilary for the monitoring of such frequencies, not just
those that *can* monitor them.
Presumptive evidence only works where it is specifically written into the
law (for example, presumption that your driving is impaired if your BAL
is over the legal limit). The ECPA, as ammended, has no such provision,
not do any other applicable Federal laws.
No, I'm not a lawyer, and I don't have to be in order to know something
about the law.

> high-powered laser :ï¿½

well, to spend less time in close proximity to amorous felons, there are two
plans that I can think of. One is easy but sloppy, the other is
difficult, but tight.
a) go to radio shack
then
buy a variable resistor for tv use, outfitted with cable tv adapters
and
buy BNC male and BNC female to TV cable (is that an F connector?)
then
hook em all together
when
the junk noise hits you, crank up the resistor until the noise drops
off.
reduce antenna or add resistance until the paging tones go away.

b) locate the exact frequencies that bother you so
contact an old HAM wonk, and have him help you with the design of a
TRAP for
that frequency. Build it. Install it. Sell it on the web. Make
millions.....or not

4342. Weather Satellite Pics

Newsgroup: rec.radio.scanner

Hello all,
I have recently gotten the bug to view weather satellite data as well as SSTV pics. I am looking for some advice. I have an ICOM R7000 receiver, a BC895XLT, R/S discone ant. (discontinued one) and a telescoping antennea. I want to know the best antenna that would enable me to hear these transmissions. Do I need a steerable hi-gain antenea and a preamp? Do I need another receiver? I have tried to find the data transmissions, but no luck. I found many s/w packages and have downloaded them for evaluation, but I need the received data to try them. Any help would be appreciated, especially the appropriate freqs.
Thanks,
Eddiek

As a side note to this conversation, I found one of the best WDW, FL frequency lists I've seen in a long time. It is for the 800 MHz TRS they operate, and includes hundreds of accurate talkgroup information from Security to Reedy Creek Fire (Reedy Creek is the incorporated improvement district that Disney "unofficially" owns to charge taxes), to Mickey's garbage trucks. It also includes the locations of Walt Disney World's 3 fire stations, and the apparatus housed at each. Check it out if you plan a trip to WDW with your BC235 or BC895 TrunkTrackers. Shows a custom fleetmap for excellent TT results, as well. It's at:

Eddie, why not try the HF fax first? It includes both weather charts
and satellite imagery. Your R7000 should work well with a wire antenna
(discone probably not enough), no preamp needed.
Go to: http://ourworld.compuserve.com/homepages/HFFAX/hf-fax.htm
for info, freqs, and such.
I used to use Navy NAM (Norfolk) while stateside. Big strong signal!
If you like it, and then want to try the weather satellites, that site
has information about that also.
For APT (low res data from the NOAA and Russian polar orbiters), if your
R7000 has a 40KHz bandpass selection (somewhat wider than narrow FM, yet
much narrower than wide FM) you could use that. Otherwise you might
have to get a specialized wefax receiver. A pre-amp might be required
depending on antenna gain and line loss.
If you go beyond APT, there are the GOES (geostationary) and NOAA AVHRR
(orbiter) ground stations that can be built. That is way beyond most
hobbyists means, but doable with the right amount of scrounging and
money. The fun part is using digital imaging techniques to bring out
nuances in the cloud/vapor data, or water bodies or vegetation.
What do you do at NRL? I am a former AF wxman, and used to work with
the Navy at JTWC/Nimitz Hill. I'm good at remote sensing and GIS, but
presently working hydrology for the Army corps of engineers.
Good luck,
Brian/N0iMD

I bought the service manual for my scanner from Radio Shack for a lot
less than the price of the extended warranty. When the salesperson asks
if I want the Extended warranty, I just tell them that I will purchase
the service manual and fix the thing myself if something goes wrong.
They usually reply "You can fix it yourself?" to which I reply "YES!"
and wind up getting the service manuals that most store employees do not
even know that they sell through RSU.

Having a scanner that has cell and cordless freqs programmed into it is not illegal. Listening to the conversations is illegal IF AND ONLY IF it can be proved that one was indeed listening! The only admissable evidence that you were listening is if you couldn't keep your trap shut and told somebody else what you heard and they went to the feds saying that you were listening to cell or cordless calls.

Well, I am sure they have a picture record and are ALWAYS entitled to ask for picture ID as well. But really, it is a moronic thing to say they could be sued over this in any way, because they (and I quote) "Reserve the right to search any bag or container at any time for any reason." In both CA and FL, a pocket is considered to legaly be a container. So they've got ya comin' and goin'. They won't tolerate scanners mainly because of the risk of criminals using them tyo evade security. What I do is hook my headphones to the scanner in my jacket inside pocket, and have a wire plugged into a Walkman and then clipped short but tied into a buttonhole of my shirt. They have never looked at me twice!

Just my two cents worth.

>I've been looking for a 2000 series scanner for a friend.
>I can't find a price that's lower than $245 (and that was for a 2004). I felt that I could find one for $200. That hasn't been the case so far. If you know a source for $200 2006s--let me know.

People obviously can ask whatever they want, but anyone who spends more than $250 for a PRO2006 is an idiot and mainly interested in listening to cellular telephones, I'll bet.

Guy posted a PRO2006 here just yesterday asking for $200. Claimed it was in good condition. Probably gone by now though.

I'll do it this weekend, I just happen to have a 3 day weekend
approaching!

> And you *THINK* your is better?

Yes, by FAR. BTW- learn grammar, you should have said "your's", not
"your".

> I really don't care about my reputation,

That is obvious.

> Lets start with some simple facts which started you on this long and
> laborious trek that ended you up in here with nearly everyone hating

YES!!! It was Bill Cheek making BOGUS posts under the name of
"WinRadio" that started all this.

> you:
> 1. you mouthed off to a moderator in one fidonet group, thereby getting
> you banned from said group.

Yea, Bill Cheek! He was kicking about 2 or 3 people per day off that
group

at that time. Many people were upset at Bill for his behavior.

> 2. you then proceeded to harass others of that posting group that showed
> up elsewhere (and I was whitness to much of this)

Really! Who were the "others" that I harrassed?

> 3. those actions got you banned from yet another group (in this case,
> scannerradio) by Mr. Cheeck for actions YOU took.

Sorry, you already used that one. This one (#3) and your other example
(#1) were the SAME instance. I have only been kicked off of ONE
fido echo, that being "Scanradio" by Bill Cheek.

> 4. you then proceeded to take your gripes to the various newsgroups here
> in the internet by posting many (and varied) stories about who did what

No, infact YOU & Bill & a few others often bring up the Fidonet issue,
not me. I don't care to carry grudges but you & the others keep
wanting to bring up that crap from the past. Christ, I let it
go & just figure it was Bill acting like a BIG MAN when he thought
he had a little power, I don't carry the grudge against him for it.
So WHY do the rest of you keep wanting to bring up what he did?

> 5. you have altered key facts in an attempt to make you appear as the
> victim many times during the last 2 years in this (and other
> newsgroups).

Really! What "key facts" have I altered? Please be specific &
give details.

> 6. you have posted under other "aliases" in an attempt to discredit
> others or make it appear that you had a small (but vocal) following.

Really! What other "aliases" have I posted under & how do you prove
this?

(YOU have done this NOT ME & I have proof of it Eric!)

> 7. you continue to harass others that do not agree with your postings,
> even to the point of forging posts from them.

REALLY! What proof do you have that I have forged posts & how do you
prove this?

> 8. your actions of late have clearly demonstrated that you are not to be
> trusted.

This is true of YOU, NOT ME!

Radio Shack is closing them out. IMO, if you can find one for $160,
you should jump on it. RS was selling them for $180 in January and
I felt guilty about getting one so cheap then :)

The 2041 is the base version of the Pro-64 handheld and is capable
of uploading frequencies from a PC. There is much information
available about it online and several software programs also.

Hello all. I am having a hard time finding the exact frequencies used for City of Atlanta's trunked radio system. I have read all 3 Trunktracker sites and the 2 local scanning pages. All list different set of frequencies used in the system, Anyone know which is current. And which page has the best(accurate) ID list.

Thanks in advance.

Tim

Source record: 171129

Hi I bought this used scanner awhile back.....Trying to figure it out because I got no instruction manual with it. The name of the company is NetSet it has a number on it which I think is it's model type. The number is PR0-49. If you own something like it perhaps you can help me with it. I am mostly trying to figure out what all the buttons due....There are the following

keylock: Which I think means that you cannot enter a frequency
scan: obvious
manual: obvious
lockout: not quite sure
review: reviews channel frequency
wx: weather channel
then there is the number pad but I also don't get what the E is for...I think it is for enter. and under the period in white writing is clear...How do I use the clear function?

If anyone can help me or better yet get me a photo-copy of the instruction book I would love it.

Thanks
Rob Sutherland

Tandy still sells the 2006 manual-although it is sometimes back-ordered.
The only manuals they won't sell are the very latest ones.
(like the PRO-90, for example).
All others are available.
There was a period of a few months when they stopped selling all manuals
for 800 Mhz capaible units though.
The only bad thing about the above-when they starting selling the manuals
again, they raised the prices for them :-(

>What a ridiculous ripoff. You can buy an Optoelectronics R11 for $399.00
>
> - Harold
>

But Harold the optoelectronics unit doesn't offer the array of controls or a TV like display that looks real expensive. Of course there are other less expensive units or even combinations of units that can be just as effective -except they aren't priced nearly in the same ballpark as "professional" equipment.

Even in the professional equipment category there are less expensive options. I think Hewlett Packard makes several versions of what they refer to as a "communications service monitor" which is something of a combination unit with receiver, Frequency counter, deviation meter (in case you care whether the transmitter is staying within legal specifications) and spectrum monitor. But they range in price from 10,000 to 40,000 dollars.

But for price comparison purposes ICOM makes a general coverage receiver with a built in spectrum display for right around 3000 dollars and they have a transceiver version for around 5000 dollars (in case you happen to be a licensed ham radio operator you could have it for work or play....)

Unfortunately I haven't heard of too many companies putting out linear junction detectors on the cheap side. Which means you might not have much luck locating anything thats dead or dormant (anything electronic based with a dead battery or thats meant to only transmit periodically).

On the other hand certain passive eavesdropping technologies have gotten cheap enough for the masses. Check out Information Unlimited Inc in the back of any electronics magazine or on the web. They have a laser system you can build from plans or a kit. I think this unit or something similar was featured in Radio Electronics or Electronics Today or some such rag.

Like any technical field you almost have to be exposed to it constantly to keep up with the latest and greatest. SOme of the concepts never change but the smallest size possible sure has.

Good job Dave.!! I thought this matter was resolved when I told you people that warranties are for smart buyers. Some people have the know how to fix some problems with scanners, but not everything. People that don't buy warranties are the same jerks that drive without auto insurance and make rates for all of us law abiding people outrageous (and cost the gov't millions in medical expenses for people injured in wrecks and have no health insuranc to pay the bill). Again, no matter which product you buy (eventhough the RS Pro-90 is the better value), get a warranty and save the hasle down the road (or send your unit to Dave, I'm sure he backs his work with a WARRANTY). End on this subject. No RE: replies necessary.

They really wont be able to, but if one of those security guards that did
whatever to him spotted him in Disney * again, then they can arrest him
and put him in Disney Jail (?).

I missed the start of this thread so not sure what was said, but
I know at least some of the manual are available as I just bought
manual for the Pro-26 and Pro-64 scanners via the 1800 number I
got off the Radio Shack web page.

Uniden 220 xlt for sale:

* Nice, clean condition with no scratches, dirt, etc.

* Features Turbo Search, Data Skip, and notifies you if you try to
store the same frequency twice on two different channels (nice feature).

* 200 channels, 800 Mhz (cell images aren't the clearest), double
conversion, limit search, numeric battery power indicator

* Comes with duck, belt clip, battery pack, and charger/adaptor
(no box, no docs)

* $120 shipped (prepaid) continental U.S.

Please reply to me directly at
aa186@acorn.net

as I don't read this group every day

Mike,
Yes, the airwaves ARE public, BUT Disney's grounds are not.
One private property, so long as the owner is not violating any law,
they can pretty much do what they want. If that is saying "You can't
use a scanner on our property", they can do that. They can't stop you
from listening from OFF their property. Heck, if they told everyone
that they had to strip naked to walk around, or they would have to
leave, they could do that - they just have to give you that choice, Do
XXX or leave. That is what a trespass warning is.

Subject: Icom PCR-1000 Commands: The List So Far
From: jcwren@atlanta.com (John Wren)
Date: 1997/12/22
Message-ID: <34ab79cb.145042590@nntp.atlanta.com>
Newsgroups: rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.scanner,rec.radio.amateur.equipment
[More Headers]

For those of you who want to write your own applications to control the ICOM PCR-1000, here's a little help. This is what I've decoded so far:

Version 1.00
12/21/97
John "Chris" Wren, KD4DTS
jcwren@atlanta.com

Assuming that you've started by turning on power to the radio, the radio comes up at 9600 baud, and continually sends H100<cr><lf>. This indicates the radio is alive, but "off". An application should then send H101<cr><lf> to the radio to turn it on (DTR also needs to be asserted). The radio will then reply with "G00". There may be some action regarding the control lines (RTS, CTS, DSR) here, but I didn't record that. The ICOM application then sends G105, which sets the serial port rate to 38400. At that point, you're ready to rock'n'roll. You'll need to set the volume and squelch before you'll hear anything.

Sending commands to the radio is not time critical. If you have a terminal program connected to the radio, you can do most of this by hand. Note that most commands need to be terminated with a <cr><lf>.

I don't guarantee the accuracy, but I feel pretty good about what's here. There are a couple of commands that I have no idea what they do. Some of the commands allow interrogation of parameters, such as the GE? and GD?. These always return the same value, and may say something about what country the radio is configured for.

I don't see any command that gives away what version of the
firmware you have. That would be a nice one to find (of course, there
will only ever be one release, because if there was a bug (and Icom
never ships radios with bugs in the) it would be a feature, and
couldn't be changed.

There are a couple of commands that I have at work that I will
add to this list. They dump some values that seem to have something
to do with the band-scope functions. When I get around to picking
those up and checking them out a little further, I'll post a revised
list.

There are 4 surface mount resistors in the radio, near the one
corner. We replaced these with 4 DIP switches in an attempt to figure
out if the cellular block could be defeated. To date, no success.
There are diode packs on the other side of the processor that might do
something, but the person I borrowed the radio from was paranoid
enough about the change with the resistors. Anyways, I don't have the
results of interrogating any registers with the DIP switches in other
than the default position.

All parameters are hex values, but are sent as ASCII. I.e.
(from the chart below), J40 is the volume register. It requires that
2 bytes follow, which are value to set the volume to. 0x00 is the
lowest volume, and is sent as ASCII-0, ASCII-0, not <0x00><0x00>.
0x7f is the midpoint (in theory. It's non-linear), and is sent as
ASCII-7, ASCII-F.

Power H1xx
00 = off
01 = on
H100 is sent whenever the radio is off

Power Inquiry H1?
returns 00 if off
returns 01 if on

Results G0xx
returns 0x00 if command good
returns 0x01 if command bad (seemingly)

Baud Rate G1xx
00 = 300
01 = 1200
02 = 4800
03 = 9600
04 = 19200
05 = 38400

Signal Meter G3xx
0x00 = off (does not require LF)
0x01 = on
0x02 = numbers sent as binary
0x03 = on, numbers sent as binary

Signal Meter I1?
returns 0x00 - 0xff

Volume J40xx
xx is 0x00 - 0xff

Squelch J41xx
xx is 0x00 - 0xff

IF Shift J43xx
xx is 0x00 - 0xff

AGC J45xx
0x00 = off
0x01 = on

Noise Blanker J46xx
0x00 = off
0x01 = on

Attenuator J47xx
0x00 = off
0x01 = on

VSC J50xx
0x00 = off
0x01 = on

Tone J51xx
0x00 = off
0x01 = on

Frequency K0fffffffffmmFF
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K

Unknown Commands
I0?
I2?
I3?
G2?

G4?
GE?
GD?

John "Chris" Wren, KD4DTS

Subject: Correction to: Icom PCR-1000 Commands: The List So Far
From: jcwren@atlanta.com (John "Chris" Wren)
Date: 1997/12/27
Message-ID: <350a4725.590847443@nntp.atlanta.com>
Newsgroups:
rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc
[More Headers]

I see I made an error in explaining the frequency setting
command of the PCR-1000. The correction version of the full command
list will have this corrected, but here's the deal.

I left out the trailing '00' on the command. This is
obviously a parameter of some kind, but I'm not sure what it does.
The control software always seems to send a '00' here, and that works.
I haven't tried other values to see what the impact might be.

Thanks to the folks who found this who tried it, found it
didn't work, and asked me why.

Frequency K0fffffffffmmFFXX
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K
XX is an unknown function but is always '00'
00 = ?

THAT is the stupidest statement you've made yet, Smacksie.

Unintelligent life forms, such as yourself, cannot
possibly recognize intelligence.

You're faking it again, snotwad.

4418. 890XLT Bearcat Scanner Mods

Newsgroup: rec.radio.scanner
Date: 1998-02-07 00:00:00 UTC
From: Carl Lassanske <n9jxb@wirural.net>
Message-ID: <34DCBDE2.57417A5@wirural.net>
Source record: 171168

I have an 890XLT Bearcat Scanner which I'm told is modifiable for the 800 band frequencies. I found the following instructions but I need clarification on steps 7 and 8.

BC890XLT-800MHZ FULL RESTORE

1. REMOVE ALL CABINET SCREWS.
2. REMOVE 4 FACE PLATE SCREWS AND 1 BRACKET SCREW AT CENTER OF MAIN BOARD.
3. CAREFULLY DEPRESS THE OUTSIDE EDGES OF FACEPLATE SHIELD AND TILT DOWN.
4. UNPLUG J4 AND J5 AND RIBBON CONNECTORS J501 J502 AND J503.
5. REMOVE FACEPLATE AND LOGIC BOARD.
6. POSITION BOARD SO MICROPROSSOE CHIP IS ON LEFT AND MEMORY BATTERY ON RIGHT.
7. LOCATE THE 3 CHIP RESISTORS AT CHIPS UPPER RIGHT..MARKED 104 AND CAREFULLY DESOLDER.
8. INSTALL THE CHIP RESISTOR AT THE 2 EMPTY PADS CLOSEST TO MEMORY BATTERY.
9. REASSEMBLE CAREFULLY IN REVERSE ORDER.
10. TEST BY ENTERING FREQ. AROUND 870 MHZ.

If anyone has attempted this modification or has additional knowledge on what to do and what not to do, I would appreciate hearing from you.

Carl

> Thanks for your help!
> Pascal
>
>

I assume that your cable is OK based on your message, at least for sending
commands.
Have you checked it for receiving commands?

An easy way to check is to use any communications package.
For Win31, use Terminal, for 95,NT use HyperTerminal.

Set the appropriate COM port to 9600,N,8,1,No flow control,TTY
Emulation,Echo locally typed characters, append line feeds to incoming
carriage returns, and make sure your radio is in Remote mode.

To check your frequencies on the radio, type the command:
MAnnn<enter>
Replace the nnn with a channel number (e.g. Channel 1 would be MA001)
"MA" must be capitalized.
When you press Enter, the response should be:
C001 Fnnnnnnnn TF DF LN AF RF N00

The "Fnnnnnnnn" will be the frequency of that channel
DF/DN = Delay oFf/oN
LF/LN = Lockout oFf/oN
RF/RN = Line mode oFf/oN

I don't know what the TF/TN, AF/AN, Nnn mean. Yet.

Source record: 171178

I have a new in the box Yupiteru 7100 receiver for sale. This
outstanding radio covers HF through 1 ghz, am/fm/ssb. This radio is full
spectrum with no frequency gaps. Comes with telescoping whip antenna and
ni-cad batteries. Does not have (not supplied when purchased) a battery
charger, but any 12 volt output charger works great.
Moving forces sale. I paid $600 new. Will sell for $500 plus
shipping.
Respond via E-mail please to DEdger@aol.com

>Does the 1986 ECPA cover telephone patches in a trunked radio system? Is it
a
>crime to monitor such "phone" interconnects?

A literal reading of the law indicates that it is NOT illegal to monitor phone interconnects on systems that are not primarily in business to offer telephone interconnect services to a significant segment of the general public. This language appears to cover what you describe. However, there are FCC officials who read the regulations differently, so the question of what constitutes a violation seems to be up in the air. For further explanation, visit www.ggw.org/nf2g and follow the USA Nationwide link to "Laws & Regulations".

There are several people who live to post and reply to messages on this NG in a negative and hatefull manner. I can't see why some people enjoy making wise cracks about almost anything that other people say. Stop and think, that person you are low rateing had a good reason in his mind for posting a item in the NG and he or she thought it was important to post it for other people to read and possibly help someone or request help about something they needed to know about.
If you , not refering to anyone by name, can't respond in a respectfull manner then keep your mouth shut. Keep your negative comments to yourself. In trying to low rate other people you are only making a fool out of yourself.

>Presumptive evidence only works where it is specifically written into the
>law (for example, presumption that your driving is impaired if your BAL
>is over the legal limit). The ECPA, as ammended, has no such provision,
>not do any other applicable Federal laws.

ECPA does not stand alone in the law. The presumptive components are written into the Communications Act and/or FCC Regulations. The principle has been used in the past to prosecute those who possess illegal CB linear amplifiers, even when the amp was disconnected and turned off. Those people were not prosecuted under Part 95 but under the other law (I can't recall right now where it is) that states the presumption that possession=intent to use.

Hello, my wife and I will be crusing on Royal Caribbean Cruise Line's Monarch of the Seas, March 8-15, and I thought it would be interesting to listen to ship-board, and ship to ship/ship to shore radio traffic on my new hand held scanner.

Does anyone have any idea of what frequencies I might be able to hear this on?

Thank you very much for any and all help!

JC

4451. Bathroom antenna story

Newsgroup: rec.radio.scanner
Date: 1998-02-08 00:00:00 UTC
From: Bill Masters <nospam@never.mor>
Message-ID: <01bd34de$ed399580$99ae9ad0@john58>
Source record: 170951

I was sitting in the bathroom listening to my local fast food staff (don't ask... just go along with me) when the antenna of my handheld scanner accidently touched the bottom rail on which my shower doors open and close. The signal suddenly was crystal clear! I pulled it back and the signal faded. When I had finished my business in the bathroom, I went out and found a piece of 12-gauge speaker wire and hooked it onto the rail, then wrapped the other end around my scanner's antenna. It was incredible how the signal was boosted! I tried other bands, and the VHF wasn't too much different, but everything from 108MHz down through the MW band received substantial signal boosts. For the fast food restaurant (30.84MHz), the radio barely picked up a signal with the antenna raised, but adding the wire to it made the signal strength meter jump all the way to the max.

Does anyone know why this happens? I'm not sure what kind of metal the rails are made of, but they are about six feet long, and run parallel to the ground, about 18 inches off the floor. The tub on which they sit is ceramic. Based on what little I know about radio, this sounds like a perfect antenna. Anybody else have any experience with non-standard household antennas? And just think... I almost went and bought a RS antenna for my house. This one is free, and it seems to be working fine. I bet it's very directional, though. That's probably its biggest drawback. Plus, it makes my wife keep asking why I've been spending so much time in the bathroom!

Bill

4452. BEARCAT 101 info needed...

Newsgroup: rec.radio.scanner
Date: 1998-02-08 00:00:00 UTC

I just inherited an old BEARCAT scanner...16 channels...
There are 2 switches marked "ready" and "enter" under channel programming.
Does anyone know how to program freqs into this unit?
I have 2 other scanners that are of more recent vintage and they are a breeze
to program....This one I am unfamiliar with.
Any help would be appreciated.....Bill

Actually you are wrong. It is illegal for amone w/o a ham license to have a 10 meter capable linear. The way most are caught and prosecuted for FCC violations is big mouths and way too much power. Possesion=intent to use only works when the possesion is restricted.

OK, my scanner (the PRO-29) which has the MC3361BD discriminator chip. In a comparison list, I found that the base output was pin 9. I soldered a wire to pin 9 to the ring of my newly installed jack. The ground from the unit is soldered to the tip.

Is this incorrect? A professional scanner technician told me that's the polarity I wanted to create.

Also, has anyone else successfully made a discriminator tap off the PRO-29? How was it done in your case?

TP-1 does not give output. Pin 9 so far seems to not give any output. I am assuming the polarity is wrong. Someone let me know.

I just realized that neither polarity is working. So it isnt that.

Currently, I have pin 9 soldered to the tip, and ground to the base/ring.

I can not seem to get any output from the discrim at all. Please let me know
if you've done a discrim tap on a unit with MC3361BD before. THANKS! =]

> - Harold

Harold,

Thank you for your interest in the equipment (and thank you for ordering three units).

There is no simple way to put this, but... Real TSCM equipment costs money (a lot of money). The OSCOR is actually considered to be a low cost instrument, with one specific purpose. It is an instrument for quick checks of a suspect area when the TSCM specialist doesn't have the luxury of time. The OSCOR is useful to establish a limited level of security while the "big equipment" is being unpacked from the truck.

When a TSCM team performs a service very often hundreds of thousands of dollars worth of instruments are used. Also, many corporate TSCM teams utilize sets of equipment costing over a million dollars.

One of our corporate clients maintains 9 TSCM teams, each team consists of 2 people (each of whom has either a Masters or PhD in engineering). This team uses just over 12.5 million dollars in equipment, with yearly operating expenses of just over 3.5 million. (The budget just to keep the equipment calibrated is over 1/2 million dollars per year). This breaks down to each person using almost 700,000 dollars in equipment, and generating almost 200,000 dollars in expenses (which is typical of the entire TSCM industry).

Corporate TSCM teams, diplomatic teams, and military teams take their TSCM equipment, training, and skills with deadly seriousness.

When the CEO of a Fortune 500 company, Wall Street Maven, or a Madison Avenue advertising agency has their offices checked for eavesdropping devices; they use only those TSCM firms who have invested hundreds of thousands of dollars in equipment (and have many years of experience and training).

Within the TSCM industry a low cost radio such as the Watkins Johnson Minicepter start at 15,000 thousand dollars. A "cheap" digital spectrum analyser costs at least 50,000 dollars, and often over 125,000 dollars.

Nothing in the TSCM business is cheap, and customers know and appreciate that. Customers know what questions to ask, what credentials to ask for, and they know what real TSCM equipment looks like.

Yes Harold, we are offering the unit for "only $15,850", and at that price I wouldn't be at all suprised if someone ordered themselves six (it's happened before).

The OSC-5000 is a great little unit, but it's designed for one specific purpose, TSCM.

Please let me know if you have any further questions.

You may also find our web site interesting, it contains hundreds of pages of information relative to the TSCM industry.

Rick,

Depends on where you're located; the Target stores here in Des Moines, IA, appear to be using 151.6550, 154.6250, 154.4600. You may want to try 461.0 - 469.0 MHz as well. Wal-mart, and the majority of other department stores, which utilize two-way radios can also be found within the same band.

If you're concerned about privacy, and really, we all should be even
if you "don't have anything to hide" you may want to look into one of
the newer Digital Spread Spectrum (DSS) phones. When considering a
cordless phone, you should make sure it is digital, and not analog to
begin with. As of right now, DSS is the most secure cordless
techology available. Although possible, it is very unlikely that your
conversation would be intercepted.

For the fellow who posted, saying he didn't need to worry about
"privacy", consider this:

Just because you are not doing something `illegal', doesn't
mean you should not be concerned about the privacy and
security of your telephone. Do you have credit cards? Or
a checking account? If so, like everyone else, your bank
probably has one of those automated systems, where you can
call and check your balances. When you key in your account
number, anyone can be intercepting the signal.

Criminals can use your telephone against you. Using a scanner,
that you can pick up for $60 now days, from almost any retail
store, you could be providing them sensitive information
about you, or your family. Using the scanner they could
easily find out exactly when you're going to be gone, out of
town, alone, or what have you.

Not trying to alarm anyone, or spoil the phone of the
bored scanner-heads that like listening in, just for the hell
of it.. but it's alot more serious then you seem to understand.

Dear Snotball Mackey:

Unless you have serious objections, sometime in
the next two or three days, I am going to slap
your sorry ass back onto my Shit List where I
will soon not know whether you're dead or dormant;
sacheting or prancing; farting or fiddling; and
pissing or moaning.

So if there is anything else you want to discuss
with me, do it righteously quick and smart-like,
you know....tuit suite. And if I were you, I'd
be real respectful and liberally lace your
ruminations with lots of "sir's" and "Mister's".

And.....if I were you, which...thank God I ain't....
I'd develop a sense of "topic" and stick to it.

Barring those tidbits of sage counsel, I'll have
you back on my Shit List quicker than you can
snivel about it to your niece, Petey Joe Boe.

So if you got anything to say, be quick about it.

Understand?

Good.

4489. CLEMARS and CLERS - help

Newsgroup: rec.radio.scanner
Date: 1998-02-08 00:00:00 UTC
From: madscanner@hotmail.com
Message-ID: <34DD81CF.4CB0@hotmail.com>
Source record: 170999
Cross-posted to: rec.radio.scanner,alt.radio.scanner

To any California law enforcement officers out there or otherwise who are familiar with the California mutual aid systems known as "CLEMARS" and "CLERS," I would appreciate some help with a few questions.

I am interested in obtaining a full list of the CLEMARS frequencies. As of this writing, I have only the following.

Gold 1 - 154.9200 (Simplex)
Gold 2 - 153.9350 (Simplex)
Gold 3 - 155.4750 (Simplex)
Gold 4 - 460.0250 (Simplex)
Gold 5 - 460.0250 (Repeater; 465.0250 input)
Gold 6 - 39.4600 (Simplex)
Gold 7 - 39.4600 (Repeater; 45.8600 input)
Gold 8 - 868.5125 (Simplex)
Gold 9 - 868.5125 (Repeater; 823.5125 input)
Gold 20 - 868.9875 (Simplex)
Gold 21 - 868.9875 (Repeater; 823.9875 input)
Gold 22 - 484.2375 (No details on xmit types)

This list came from an unofficial source and I am unaware of whether the list is complete and correct. My primary curiosity lies within why the designers of this system elected to jump from "Gold 9" to "Gold 20" in their channel "numbering" scheme. I am also curious about "Gold 22"; does it operate in a similar fashion to Gold 4-9/20-21 -- optionally simplex or repeaterized? Finally, what is the actual status of repeater availability for such CLEMARS channels? In all my listening, I've never heard what appeared to be a repeater on any of the CLEMARS frequencies.

Second, CLERS. The following is what I have for the system:

158.7900 - Los Angeles Basin (input 155.4300)
155.0700 - Tulare County
154.7100 - San Francisco Bay Area, Fresno County, Tahoe Basin
155.0700 - Sacramento Valley
155.7000 - Humboldt, Shasta, Siskiyou, Modoc, Plumas Counties, Cascades
453.6750 - San Luis Obispo, Ventura, San Diego, Mariposa Counties
453.8750 - Marin, Butte, San Joaquin, Monterey Counties
155.9100 - Kern County

I'm curious if I have the "entire" system here, if the present data is correct, and what the input frequencies are for frequencies other than the Los Angeles basin's.

Could anyone help?

Thanks in advance.

Brian

4490. SAN DIEGO SCANNER PAGE NEEDS HELP!

4491. Re: Atlanta TRS.....

Newsgroup: rec.radio.scanner
Date: 1998-02-08 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <6bk5dp$9ne@hopper.ACM.ORG>
Source record: 171001

timinsm@aol.com (TIMinSM) asked for:
> ... the exact frequencies used for City of Atlanta's trunked radio system.

The January 98 issue of Monitoring Times contained an excellent survey
of the Atlanta system. I suspect the sources you checked have been confused
by the various changes and consolidations that occured among the three
trunks Atlanta has operated. The airport system was shut down, though a few
of its freqs are still used in conventional repeater mode for parking lot
management. A number of frequencies from the (deceased) city administrative
trunk were borrowed for the current general system.
My most recent notes show:

GOVERNMENT - trunks | (-) inactive
| (d) digital
Atlanta, City of [b0 S3, b1-7 S0] | (p) phone patch
856.4625 .4875p ----------
857.4625p .4875
858.2375 .4375 .4625 .4875 .7625 .9375
859.2375 .4375 .4625 .4875- .7625d .9375d
860.2375- .4375- .4625 .4875- .7625 .9375
866.0625 .3125 .6125 .7875 .8625
867.1375 .1875 .3125

Georgia Bldg Auth [E2] Mutual Aid (Atlanta & GBA)
incl Capital, GSU, GaTech, GWCC
866.6500p 866.0125 .5125
867.0375 .2625p .6250 867.0125 .5125
868.0750 .6000 .8500 868.0125

Program all thirty frequencies for the Atlanta trunk, as the phone patch
freqs may be used when the system saturates, and the inactive ones may be
resurrected at any time. The standard mutual aid freqs are not part of
either trunk and appear unused except for an occasional test.

See http://www.qsl.net/ka2pyj for SW to download freqs to this radio
from your computer. Don't be confused by the description of the HW
interface. The $12.00 shareware supports the built-in interfaces of the
PRO64 and PRO2041.

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.500 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT

satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

>
YES!!!!!!!!!! I just picked one up, and it's my first scanner. Radio
Shack this weekend is running a credit card promotion which offers a 10%
discount on a purchace. So, the Pro-26 was $179.

Pass it on.

Anyone else own a BC8500XLT? Does anyone have any modifications on this model? It seemed to have a limited production. I bought it just before the 9000 came out.

>I agree- don't look like you are doing anything suspicious, but do remember
>that if they try to search your person or confiscate they must show a
>warrant.

Where did you get this bit of misinformation? The need for a 'search warrant'
does not apply to civilians, such as private security employees...it applies
only to agents of the government, such as law enforcement officers.

And, even then, there is the 'Exclusionary Rule' to consider...

> or Private propertey laws.

George Zimmerlee, N4XDC, with an historical note:

The Branch Davidian Church at Waco, Texas had a station with
two licenses. Aerial photos on the morning of February 28,
1993 show that the amateur radio tower described by the
FBI on March 4, fours days after the raid, shows that the
tower had already been DESTROYED and REMOVED, before the
ATF death squads approached the building, on FEB. 28.
There was no permission in any warrant for the destruction
of private property.

Does the FCC license supercede anything. Hell No! The
FBI responded to an inquiry by Congressman Gingrich saying
that they had specifically taken action against the
station at Mount Carmel Center to prevent the use of
the station by the Branch Davidians.

I have used a scanner at Disney World and can tell you
that the reason that they don't want you listening in is
that the staff is totally incompetent to do anything
right. They also don't want witnesses to criminal negligence
if someone is injured or killed or any reports of how the
matter was handled, such as not calling an ambulance, or
removing the injured person out-of-sight and causing
further injury in so doing.

For what it is worth to end this on-going thread. I just got back from Disney last week. I had NO problem carrying my radio around any of the Disney property. I did notice MANY people that were using the new family radio service (FRS) and I did not see any problems there either. I would think that one should use an earphone though, as I had a couple of attractions "interupted" because someone had their radio up full blast when there screaming crying kid wanted to check in with mommy or daddy.

Just my $.02

I checked out your web site. I don't agree with everything it contains but its still a pretty interesting read. Much of the information is useful.

I had a hard time keeping two words from popping into my head: "over kill"

Because for most of the population the cost/benfit ratio on using such an extensive and expensive service isn't justfiable. But it appears your services are tailored more toward the high end user anyway. Corporate board rooms are pretty far removed from the mainstream user of security and investigative services. Its an entirely different environment and mindset from ,as an example, the estranged wife who thinks her husband has tapped her phone. In such a case its unrealistic to think Mrs estranged wife is going to pay 250 dollars an hour. And its absurd to think she will tolerate a semi truck pulling up in the driveway and a bunch of guys unloading its contents into her living room....

Realistically the average person a private investigator comes into contact with is not a corporate board member worried that company secrets are leaking out. The average person doesn't have a LAN/WAN or fiber optic cables running in their home. Most small business operations maybe have an 8 port hub sitting in a closet. I mean we are talking about people with limited threat exposure. Their considerations are usually not monetary losses but privacy issues and concerns about co-workers or x-relations.

So my point is that its good to know your company exists as a resource in case a major corporation ever comes knocking to ask for TSCM. Basically at the level thats played in your sandbox the investment in equipment and training makes economic sense. For the rest of us its likely we could accomplish the task with less resources and for considerably less money. Economics aside I liked your web site.

For an Extra Class licensee, you sure don't know much about reciprocal
licensing. My KX6 call was held *concurrently* with my WA7 call while I
worked overseas. Face the challenge Toilet Boy, show us all your lack
of knowledge of geography. Tell us where KX6 is. Bonus points for
telling
us the current prefix.

How do you explain the multitude of callsigns held by people who do many
DXpeditions to remote places in the world? There are several locals
who have held over two dozen calls each. ALL of them concurrent with
their US license.

As usual, you show us your neurotic ignorance, AGAIN.

John "Richard Simmonds makes me wet with excitement!"
Mackey -- KA0SSF wrote:

> Obviously you don't understand, Richard has changed calls more recently
> than the early 80's.

Yes, that's true. In September 1996, I took advantage of the newly created vanity callsign program and applied for, and got, N7NT in November 1996. Nothing unusual or subversive about that. I work more CW than any other mode and I wanted a shorter callsign for the pileups. N7NT is approximately sixty percent shorter than WA7TWI based on the dot-element length of each callsign.

Stating an obvious truth (one which I have *never* denied or tried to hide) only shows just how ignorant you really are, Toilet Boy. It's really limp, even for you, to try and make something negative out of something aboveboard and overt. But, then you are not what you claim to be any ways.

4524. Need MN TV Station Freq's!!!

Newsgroup: rec.radio.scanner
Date: 1998-02-08 00:00:00 UTC
From: bjfranske@aol.com
Message-ID: <19980208184901.NAA29097@ladder02.news.aol.com>
Source record: 171034

I woould like IFB, VHF communications & other communications for as many Mpls./St. Paul TV stations as possible. They are not mentioned in Police Call Plus.
Some Of The Call Sign's:
WCCO
KSTP
KMSP
KARE

Thanks! Any Help Would Be Greatly Appreciated!

-- Ben Franske

The last cruise I went on was a few years ago. I had a Realistic Pro37
(and still have it) back then. I was on the Amerikanis and while we were
docked at Grenada, I was able to monitor wireless mike transmissions
from another ship docked next to us. I was hearing a karaoke contest
being held on that ship. Other folks on the Amerikanis were wondering
how I was hearing all that, Pretty cool, dont you think? I also heard
the local police, dock operations, and IFB from one of the TV down
there. In addition to the scanner, I also took my AM/FM headset and
handheld color TV. Heck, I'm just one of those people that has to stay
connected I guess.

Newsflash: Disney, like other theme parks, are considered PRIVATE property, and they can have any restrictions they want to over who does what while on their property. If they don't want people with red striped shirts on grounds, they have the right to ask you to leave or change shirts.

Just as you have the right to decide who brings what and does what in your own house, they have the right to decide if they want people on their property with radios listening to them (or whatever). It may not have been good business practice to make a damn scene over it, but they were well within their right to ask that he leave the property and not return.

4541. Alinco DJ-X10 programming software

Newsgroup: rec.radio.scanner
Date: 1998-02-08 00:00:00 UTC
From: baptpdc@netcom.com

Source record: 171076
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just finished some basic programming software for the DJ-X10.
It will save/load your current settings and allow you to edit the
following items.

Channel info: Freq, mode, step, autostep, skip, att, label.
Vfo info: Freq, mode, step
Opening banner
read/write the radio, save/load to disk.
Full factory reset
INI type file dump so you can see what's up in your radio.
More functions will be added as i get more time to work on it.

All you need is an icom CI-V interface to use it. (OPC-478 will plug
right in with a reducing stereo adaptor.)

You'll find it at: http://home.earthlink.net/~baptpdc/icommods.htm

(I also need some input if you have a european model. I've only
tested this on japanese models...)

It's not the type of law that would be vigorously enforced, only
incidently enforced. For example, supposed your home was raided during a
drug bust. As items in your home were being inventoried and tagged as
evidence, if they came across your powered-up scanner they would note the
frequencies that are programmed into it. At that point addition federal
charges could be added to the drug-related charges.

Moral: Turn off your scanner prior to being busted for drugs.
Jeff KH2PZ (former member of U.S. Coast Guard)

Oh, please, don't plant that seed!...

If you though "the old couple" fiasco was bad, this would
really encur the wrath of Congress, especially how the media is
now so starved for new angles.

Besides, it does not matter what typw of phone it is, they all
use the same standards.

Eric,

Can you turn it around? That is, can you use a disk cone antenna for
TV? I have been told that the upper element / lower element spacing
sets the upper frequency cut off and the length of the "skirt" (lower
element) controls the lower frequency cut off.

try the new NIMI nickel-hydride aa batts. they are 1200Ma which is much more than the capacity of nicads and the don't take a 'memory effect so you can "top them off" & give them partial charges. got mine at Advanced Specialties (1-800-926-9426) about $5 EA plus shipping . they work great & last longer than any nicads I've had. good luck & I hope I was of some help.

Bill,

Most telescopic antennas are usually not "tuned" to work down on the
lower frequencies.
There is no antenna that works well on all bands at the same time.

When you touched it to the shower rail you electrically "lengthened" the
antenna and
brought it closer to it's optimum length on 30MHz. The wavelength of
the signal you
are listening to is equal to C/fMHz = m. C=the speed of light

That is to say, if you were listening to 30MHz, the wavelength in metres
would be
equal to 300/30 = 10m. Naturally resonant antennas are 1/4 and 3/4
wave lengths.

10m/4 = 2.5m

My guess is that 2.5m isn't too far off the dimension of your shower
rail!

Hello!

I have just acquired this used scanner and am attempting to program it.
I know it has several frequencies already in the scanner, but I want to
delete some and add new ones.

Does anybody know how many channels are available in this unit?
Unfortunately I do not have a manual.

Any info will be great.

Thanks!

^
note the moron's use of the plural ----^

You used the plural implying more than one. I had *one* FCC mandated
change
when I changed from Novice to General. That call was held for 25 years.
The vanity call was the only *optional* change I've made. Period. Any
inference by you to the contrary is more of your lies.

The KX6 call (which you still have failed to identify the location
moron)
was on a reciprocal basis. That means KX6LX and WA7TWI were held
concurrently (look it up dolt). Obviously you're too much of a moron to
understand the difference and, for a Volunteer Examiner, know very
little
of the regulations, especially regarding reciprocal licensing.

> Richard, thank you for confirming I am correct.

I've confirmed you're a moron with genetic deficiency, nothing more.

> OK, you simply do NOT make that clear & continue to use your
> OLD call. No difference, basically the same.

I use the old call on the Internet, not on the airwaves where it really
matters. As someone else in this forum has pointed out to you (you're
too
dense to remember), amateur radio callsigns in this forum are
irrelevant,
just like you.

Actually, they are 824-849 (mobile) and 869-894 (tower). The extra
frequencies you gave are probably images, intermod or phone
converesations on buisness systems.

According to Radio and Communications magazine (Feb. 1998, page 70) you
can use an open circuit quarter wave coaxial stub to act as a notch
filter. The author said that he had a TV signal that swamped his
two metre radio and the coaxial stub almost completly removed it.

Source record: 170897

In article <6bdm51gfr1@gte2.gte.net>, "mike109" <mike109@gte.net> writes:

>Recently a friend and I visited the Walt Disney World resort in
Orlando. My friend has a motorola commercial two way radio that he had
programmed up for Disney's 800Mhz radio system. The transmit was disabled
so that the radio acted only as a scanner.
<snip>
>a security host observed him listening to Disney, and he was surrounde by
about 6 security guards, and a off duty deputy sheriff. They advised my
fiend that he was not allowed to listen to them, and stated it was a
security breach.....he can never come back to any part of Disney again.
Is this right?>

Disney is private property, and so they can set any type of rules that they
want to. When I went to Disney, I spoke with some of the Public Safety (Fire
) guys about monitoring the radio traffic. They gave me the freqs, but told me
in no certain terms that if I was caught with the radio on the grounds, that
the radio may be confiscated and I may be ejected. In fact, I recall reading
soemwhere in the literature that radios are prohibited. Granted, they don't
specifically say scanner radios, just radios, but the restriction is broad
enough that they can legally do what they did to your friend

>Aren;t the airwaves
public?>

Yes, but they believe that by listening to them while you are gounds is a
breach of security and a danger to the public's well being...once you are off
of their property, you can anything you want !

>Just a word to the wise, if your going to be visiting the Disney
Resorts make sure you conceal your scanner, or better yet leave it in your
hotel room. My suggestion is that if your going to bring your scanner in to
Disney keep it concealed and wear a earpiece.>

Better yet, leave it home and have fun ! There is so much other great stuff to
do !
If you must bring a radio, leave it at your hotel and listen to the fire/police
in Orlando. Lots more traffic, lots more fun.....

From: tandkmoran@aol.com
Message-ID: <19980209133101.IAA23554@ladder03.news.aol.com>
Source record: 170898

Some dealers of the AR-3000 advertise quite heavily in security / intel trade magazines. Often marketed with a spectrum analyzer or computer control package, sometimes self contained in a suitcase style container. I'm unaware of any police agencies currently using this particular scanner, though I wouldn't be suprised. Many police agencies use scanners to add to their dispatch center's receive capabilities. I did see a picture of an AR-3000 mounted in the rear seat of a Navy E-A6B prowler electronic warfare aircraft, and another of a newer ICOM HF rig similarly mounted, but I couldn't see which particular rig it was.

>I remember seeing in a couple of catalogs some additional equipment that

Set a search from 152 to 159 Mhz. Turn on the dataskip. When you hit active pager freqs it should pause for a fraction of a second and then start searching again. Dataskip works best on pagers, not so great on other non-voice signals like trunked control channels, mdt's etc.

> the scanner will look for an active frequency.
>
> However, my scanner just go`s to the next step and stops.
> Eg. if my step is set to 500Hz the scanner just go`s up
> 500Hz and stops even though there is no activity on this
> frequency.

The only reason I can think of that this would happen would be if your squelch was open. Do you have the squelch properly set? While sitting on an inactve frequency with the squelch properly set, there should be no sounds/static coming from the speaker.

And what frequency range are you in? I ask because of the step size you mentioned. Sounds like you are somewhere below 30MHz. For first tests, you shold probably be in the 155MHz range with 5kHz step size and FM receive mode.

If you have web capability, I would recommend you go to my radio page and download a copy of my MVT-9000 Owner's Guide.

My radio page is http://www.qsl.net/n2mca/RADIO.HTM
The Owner's Guide is http://www.qsl.net/n2mca/MVT-9000.OG

Best of luck with the new radio and let me know if I can help further!

Hi Rob,
Have never played with one of these but I'll take a
poke at your questions.

> I am mostly trying to figure out what all the buttons
> due....There are the following
>
> keylock: Which I think means that you cannot enter a frequency

Usually means you can't do much of anything with it once
the keypad is locked.

> scan: obvious
> manual: obvious
> lockout: not quite sure

Lockout is used to keep a particular channel from being
scanned. In newer models with search-skip, it can be used
to ignore a frequency but I doubt your model has this
features.

> review: reviews channel frequency
> wx: weather channel
> then there is the number pad but I also don't get what the E is for...

It is used for frequency entry usually. You typically go to
the channel you want to program using the manual and number
keys. Then punch in your frequency followed by E.

> and under the period in white writing is
> clear...How do I use the clear function?

Typically used to erase a partially programmed frequency.
If you've already typed in the '.' in the frequency, just
press '.' to erase it. If you haven't typed in the '.' yet,
simply press '.' twice to erase the digits typed thus
far.

Best of luck with figuring out your radio!

Looking to trade for a Uniden 235XLT.... I have a 2 gig Seagate ST12400N fast SCSI 2 hard drive. I also have MANY brand new unopened Sony 4mm 120m (4gig) dat tapes. These tapes sell for over $20.00 each in Computer Shopper. I am also willing to do a partial trade/cash deal as well (say $100.00 plus ???).

I alos have a bunch of other things as well (I.E. Panasonic 2x PCMCIA portable CD Rom, Some 1 gig fast SCSI 2 hard drives, a 6x external NEC CD Rom player with digital audio output connector.....) Please see below on how to reply for more info... Thanks!!

Tork's frequencies are helpful, but here's some updated ones.

LAS VEGAS METRO POLICE
1 159.150 Information/Detectives
2 159.090 Southeast area command (LV Strip, Paradise, UNLV
area)
3 158.970 Southwest Area Command (Spring Valley, areas
south of McCarran airport, Charleston Heights, The Lakes)
4 158.745 Downtown area command (speaks for itself)
5 159.210 Northeast area command (Sunrise Manor mostly, areas
around Nellis AFB and unincorporated areas of North Las Vegas)
6 159.030 Northwest area command (infamous Westside, Summerlin, Sun City,
NLV Airport area, Meadows Mall area)
7 158.790 Administrative/Rural county (areas outside the Las
Vegas Metropolitan area)
8 156.210 Tactical/car to car (used for special events)
9 158.850 Same as channel 7
10 155.910 SWAT
11 155.940 Narcotics (sometimes digital encryption)
12 156.210 Car to car
13 155.460 Traffic channel (used mostly by motorcycle cops)
14 155.880 McCarran Airport police
15 156.030 unknown

Henderson PD
1 159.120 Primary dispatch
2 155.610 Secondary dispatch
5 155.925 Car to car
6 155.865 Car to car
7 155.655 Nevada LEMARS

North Las Vegas PD
856-860.7375 GE Erricson system

Boulder City PD
154.800

Mesquite PD
154.845

>How effective are these intermod filters I've seen advertised in various ham >magazines. Do they really work as expected?

I have no idea which IMD filters you're referring to, HOWEVER:

You could put an attenuator in front of your radio and solve the IMD problem. I'm not saying that's always a good idea, but from an "honesty-in-sales" perspective, it works.

Solving IMD problems is really nothing magic. The key is knowing where your strongest signals are coming from and then deciding what kind of filter (or even attenuator) is appropriate. The nice thing about IMD problems is that for every decibel you reduce an IMD component, you get two decibels of improvement.

From a practical perspective, if you're right next to a powerful transmitter, such as a paging base, you're either going to give up all listening on that band, or get yourself an expensive cavity filter.

Choose your poison.

>Anyone have access to the Houston Police Department's helicopter freqs?

HPD helicopters, "Fox", use the same frequencies as the ground units. I have my scanner programmed with all the seven regional HPD freqs. I lock out all except Special Ops 460.350. If a Fox unit is requested a general broadcast will go out such as "Fox needed on northside". I then manual change to that frequency and can hear the Fox and ground unit conversation.

The only exception is when the Fox is landing or taking off, then they use the airport tower frequency.

Hope this helps.

Randy

Now this here is a GOOD reason why inexperienced people should not open and play with there scanners. At any rate, either take it to a RadioShack and send it in for service (don't do it if it has been modified) OR order the service manual for it (if it is available) and attempt to figure out which part you have lost and order a replacement.

Good Luck!

Clifford

> am assuming the polarity is wrong. Someone let me know.

Solder the (+) leg of a 2.2-uF tantalum capacitor to Pin 9.
Solder the center conductor of a mini-coax or mini shielded
cable to the (-) leg of that capacitor. Route the shielded
cable to the jack. Solder the center conductor of the shielded
cable to the TIP of the jack. Solder the shield of the cable
to the ring or shell of the jack. It should be a 2-conductor
jack, not 3.

That will take care of that.

Not any of which I am aware.

> What mod was used during the Congressional "hearing" last year?

I don't know, but I don't think it was a PRO-26. More
likely it was one of the REAL cellular mods.

> I've read about a mod for the PRO-43, allowing it to skip over the
> frequencies for the edge of each band and continue searching.

Not sure what you mean there. Now there is a hack that by
moving D4 to the empty spots for D3 and adding a diode, anode
to the anode of D1 and cathode to the empty pad for the cathode
of D5, then all kinds of expanded coverage is possible, including
"splinter" frequencies.

> I've also heard that someone has done this on the PRO-60.
> Could this be possible for the PRO-26?

I haven't heard about it for the PRO-60, but even so, it's
of GRE origin while the PRO-26 is of Uniden origin, so no,
there would be no chance of it for the PRO-26.

Ken's Electronics Parts in Kalamazoo, Michigan, bought out
the repair stock of ROBYN when they folded and went down
the tubes years and years ago (15-20 yrs ago). Ken's is
likely to be about your only realistic hope:

KEN'S ELECTRONIC PARTS
2825 LAKE ST
KALAMAZOO, MI 49001
616-345-4609

They may have an (800) number now. Call 1-800-555-1212, and
ask, if you want.

I've seen recent R10's in the 29xx range (domestic) and 37xx range (Canada). Both of those have Rev E logic boards (the pictures on the mods page show a Rev D). The Canada ones have the 2 resistors shown in the mod; the domestic ones don't. I have no idea if that's all there is to the mod or not - never tried it.

4629. Rat Shack Frequency Counter

Newsgroup: rec.radio.scanner
Date: 1998-02-09 00:00:00 UTC
From: tyler@nospam.com
Message-ID: <6bll5gegf1@news3.microserve.net>
Source record: 170975

A while back the Rat Shack frequency counter was $75 and people were advising against it. BUT, I just picked one up this weekend for $40. Is there any way I can make it more sensitive besides putting an amp on the front of it?

tyler

Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.500 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT

satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

4635. PRO-26 Squelch/Volume

Newsgroup: rec.radio.scanner
Date: 1998-02-09 00:00:00 UTC
From: aellery@aol.com
Message-ID: <19980209032300.WAA06055@ladder03.news.aol.com>
Source record: 170981

Picked up a PRO-26 on clearance this weekend (extra 10% off with the RS card!) I've read Rich Wells review, which said the audio is average. Compared to some other scanners I've used (PRO-60,64,67), the audio is downright anemic. Also, I've got to crank the squelch almost halfway before it kicks in. Are these problems (or are they features?) typical for a PRO-26 or do I need to exhange the one I have?

Hello, I would like to trade my BC200XLT for a Opto 535.
The 200 is in exlt condition with, battery and charger, manual, case, etc.
The Opto unit must be of the "full coverage" type. Even if you are not
interested in the 200XLT but have a 535 to sell, please let me know. Thanks

4641. Hundred dollar radio - good buy?

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: rawhide@nospam.usa.net
Message-ID: <34e0dc4f.8816835@nntp.ix.netcom.com>
Source record: 170737

I found the pro-2056 on sale for $99.95. It comes with mobile mounting hardware, a couple of antennas, a lighter plug, 13.8 volt harness, and a wall wart. My question is, is a 50-channel scanner with no 800mHz coverage worh a hundred bucks? What if, while you normally scan a couple of ranges on other radios, you want to listen to a specific frequency? Kinda knocks the whole idea of a priority channel into a bucket.

My local RS manager's a decent individual (rare, I know), and he let me play with one. It's a pain to program but seems to search well, and if you had 50 chan's to scan I think it operates at 100 channels per second!? I'm thinking of picking one up just to leave on 1 freq most of the time (my local PD is still UHF).

Please comment to the group, as I'm sure there are others just as curious.

Randy,

OK, I've got that noted.

The reason I ask is because I live directly in one of their flight paths and see them routinely over my home. On occassion I see them circling the neighborhood during the evening hours and was curious if I might hear them on the scanner.

So, "Fox" is the designation for the HPD helicopters, huh? I had heard that term on the channel before but was unsure what it meant.

Thanks.

Charles

Actually the calls in question were NMC6 and NMO, which were operated by Jeffrey Herman (jeffreyh@hawaii.edu). You obviously can't read English very well because you never finished high school. I added to that list the call ABK, which was the *maritime* station I worked at when I was at the KX6 location (which you still haven't identified the location of). All three of those callsigns are *maritime* stations, something you're too dense and stupid to realize. You keep drinking the blue water from the toilet.

> Perhaps if you spent more time in study rather than flaming on this

I have just purchaced the Radio Shack Pro-26. I have seen posted in this newsgroup people's criticism that the squelch control is "poor" or "off". Can anyone explain to me how I can tell if my unit is working properly? This is the first scanner that I have owned, and I'm not sure how to judge it. I seem to be receiving frequencies pretty well.

Hello to all...

I have a few things for sale. Terms of purchase:

All items are sold "as is", with no implied warranty on the part of the buyer. Payment shall be made prior to or by COD with secured funds only. If buyer wishes to prepay by personal check, shipment of item(s) will occur when the check clears. Buyer pays all shipping charges, and has choice of FedEx, UPS or US Postal Service for shipment All prices are to be considered firm.

Now that all the fine print is out of the way, on to the items...

BTW, if you have any questions, feel free to email me at kb8ixp@lightstream.net.

73 de N8CLE (new callsign)
Sean Douglas

Note: the condition after each item refers to the cosmetic condition of the item. All equipment is to be assumed to be in perfect working order unless explicitly specified otherwise.

1
Icom IC-900a Multi-band mobile: $900.00
Four band units: 28 MHz, 144 MHz, 222 MHz, 440 MHz
All accessories included.
Instruction manual included.
Condition 8 of 10.

2
Kenwood TM-732a Dual band mobile: $375.00
144 Mhz and 440 Mhz.
Can be remotely mounting, but that equipment is not included
All accessories included, except for mounting screws
Original box and instructions included.
Not modified.
Condition 9 of 10.

3
Icom IC-R1 Scanning Receiver $275.00
0.5 MHz to 950 MHz receive *continuous*.
100 Memories.
Includes belt clip, end cap, antenna, internal battery and charger.
Condition 8 of 10.

4
Icom IC-2SAT 2m HT $175.00
144 MHz.
Includes belt clip, end cap, antenna, internal battery and charger.
Condition 8 of 10

5
Icom IC-4SAT 70cm HT $150.00
440 MHz.
Includes belt clip, end cap, antenna, internal battery and charger.
Condition 6 of 10

6
Uniden MR-8100 Scanning Receiver $225.00
29-956 MHz less cellular (can be restored via computer command).
Includes Speaker
Condition 7 of 10

7
Midland 70-665B UHF Commercial Transceiver $200.00
450-470 MHz, 80 Memories EEPROM programmable, remote mount 65 Watt.
Includes microphone, speaker, service manual.
Condition 7 of 10.

8
Midland 70-056C Low Band Commercial Transceiver $200.00
40-54 MHz, 80 Memories, EEPROM programmable, remote mount 110 Watt.
Currently programmed in 6m amateur band.
Includes microphone, speaker, service manual.
Condition 9 of 10.

9
Radio Shack Patrolman PRO-2026 Scanning Receiver
$125.00
29-956 less cellular, 100 memories, service search
Includes original box
Condition 9 of 10.

> gizmo4u@juno.com

You should use 50 ohm transmission line between a 50 ohm source
(antenna) and a 50 ohm load (scanner). The cophase antenna uses
a different impedance transmission line because it is combining
two 50 ohm sources with one load, and maintaining 50 ohms as
seen by the load. Thus the length of the cophase is critical.
For example, a short circuit at one end of a 1/4 wavelength transmission
line looks like an open circuit at the other end.
A transmission line that is terminated with it's own impedances
does not have a critical length.

But, in real life, you could probably get away with using 75 ohm
transmission line inbetween your scanner & antenna, with a
(probably) acceptable degredation in performance. Not recommended.
You will have some loss of sensitivity. But do not consider this in a
transmit path-
the reflections will raise heck with your transmitter.

Have fun,
Al n2nkb@worldnet.att.net

Source record: 170751

Please don't use WD40 for pots, switches, connectors, or anything you want to stay clean and lubricated. WD40 is a petroleum based oil which will hold on to dirt and cause a nice grime build-up. It is also not conductive, and has been known to promote corrosion. If you must use something, try De-Oxit from Caig Labs. I have used similar products and have good results. This chemical will enhance contact conductivity, and forms a protective film.

...So, i'm scanning "today's favorite" set of frequencies, which happens to be 450.xxxx MHz for all of the local TV "El Nino" storm coverage around the San Francisco bay area and...

My handheld scanner stops at a noisy spot. Oops; the squelch is set too low. Well, I was trying to pull in stuff from all around the bay, so I wanted anything resembling a signal.

As my hand gets near the squelch knob (and the antenna), the interference diminishes and it continues scanning.

I move away. The scanner stops at the same noisy spot again.

This repeats two, three, maybe even five times until I identify the offending channel and lock it out completely.

A minute or two passes; another frequency gets noisy enough to do the same thing.

The hand moves towards the squelch knob, and sure enough, the interference stops. Damn.

Perhaps I need to hold a handheld scanner in my hand at all times instead of letting it sit on a table.

Some days, things seem "clear as a bell" and I don't get false signals. Other days, it's remarkable how much stuff there seems to be "in the air".

This radio hobby is very interesting; I wish I had been able to take RF electronics in college, but computer electronics was what I studied. They sure are different animals.

One interesting note...I have both Uniden 150 and 3000 models. I've found the sensitivity of both scanners to be pretty close, but the BC150 can pull in any 450.xxxx MHz signal far, far better than the model 3000 can. For every other frequency range i've used, the scanners are pretty much identical, but for 450 MHz

there is no doubt that the BC150 brings 'em in clear, when you can hardly hear anything
on the BC3000. Identical antenna, identical environment, and there doesn't seem
to be anything wrong with the BC3000.

I can agree not doing this with transmitting but certainly can't agree with you concerning using it with a scanner/receiver. Transmitters and transmitting antennas operate in narrow range of frequencies. You need proper impedance matching to keep the xmitter happy and to be heard.

OTOH, scanners operate over a broad range of frequencies. If you were to look at your antenna and coax through an antenna analyzer you would notice the impedance the receiver/scanner sees goes up and down like a roller coaster crossing 50 or 75 ohms many times. (I would suspect the same would be true if you could look at the antenna connector impedance.) Now if you are using your scanner to monitor a specific small frequency range with an antenna cut to that freq you might be able to tell the difference between 75 and 50 ohm coax. I really doubt it though.

In short, if you can find 75 ohm coax with the loss qualities you are looking for, use it. You will never know the difference.

Ain't it sweet! There are some that don't believe the capability of the
old TV antenna in the scanner world. You are now NOT one of them!

> One note though, it is best to install any TV antenna (used for scanning)
> with the elements running vertically up and down as opposed to their normal
> horizontal.

Yep, get those pointy things sticking up and down in the air, that is
the way most of the stations you are listening to have theirs. You will
be hearing even more and better things when you do so, with the antenna
horizontal your signal loss is BIG when listening to transmitters that
are using vertical polarization.

> This is easy to do by making up a simple "T" pole. You attach
> the antenna to one leg of the "T" and can install another antenna on the
> other leg of the "T" also......

If you can, you should try and use a nonmetallic mast to support the
antenna, at least to a point below the lowest element. A metal mast in
the area of the antenna can screw up the beam pattern and not be as good
as it can be. OTOH, it will still work well with a metal mast.

Message-ID: <34E1070F.D53@afn.org>
Source record: 170769

A few days ago, while visiting a web site, I saw a mod for the PRO-60 allowing it to search the shortwave bands even though these frequencies were not programmed into the CPU. This was accomplished by setting the CPU to frequencies between the standard ones. For exapmle, the scanner would search from 30.0025 MHz to 30.0075 MHz instead of 30.000 to 30.005Mhz. This allowed it to skip over the band limits and continue searching. If anyone has any information about this mod or similar mods, please respond to this message. Thank you in advance.

The following gear is in excellent condition - No C.O.D's - some help on shipping - advise zip code in reply.

May swap for Trunk Tracker or other scanners.

1. Kenwood TS-870S Xcvr - Serial # 70600274 - $1450 - SOLD
2. RS HTX-202 2mtr Hand held w/batt & ant - $95
3. MFJ 20mtr (cw) QRP transceiver - $90.
4. Icom IC-PS15 Pwr Supply - $100
5. Pyramid Phase III 35 amp (variable) dual mtr Pwr Supply - $100
6. Emco PS-12L (HD) 10 amp Pwr Supply - $25
7. Kenwood PS-52 Pwr Supply - matches 870 - $105 - SOLD
8. Kenwood SP-31 Spkr - w/audio filters - matches 870 - $75
9. Kenwood SW-2100 SWR/PWR meter (dual) - matches 870 - $90
10. Oskerblock SWR-200 SWR/PWR meter (dual) - $55.
11. Daiwa CN-101L SWR/PWR meter (15w/150w/1.5kw) - $70
12. Icom HM-12 hand mike - $20 - SOLD
13. Icom HM-7 hand mike - $30
14. Alfa 7705 Capacitance Meter w/case/leads - $50

Inquiries welcomed.

Looking to trade for a Uniden 235XLT.... I have a 2 gig Seagate ST12400N
fast SCSI 2 hard drive. Plus I have a Uniden 800XLT(cell) scanner. I also have
MANY brand new unopened Sony 4mm 120m (4gig) dat tapes. These tapes sell
for over $20.00 each in Computer Shopper.
I am also willing to do a partial trade/cash deal as well (say $100.00 plus ???),
or pay $150.00 cash for a used one.

I also have a bunch of other things as well (I.E. Panasonic 2x PCMCIA portable
CD Rom, Some 1 gig fast SCSI 2 hard drives, a 6x external NEC CD Rom player
with digital audio output connector. Please see below on how to reply for more
info... Thanks!!

4690. VOX Device for Radio Transmission

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: Stan Sherwood <StanS@ProtoLink.com>
Message-ID: <6bpsvf$gv8$1@usenet51.supernews.com>
Source record: 170801
Cross-posted to: alt.ham-radio.packet,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.scanner,sci.electronics.design,sci.electronics.equipment,sci.electronics.misc

I'm looking for a commercial voice activated switch product to provide automatic keying of a radio. The features that I am looking for are as follows:

1. Accurate voice detection with minimal false triggering.

2. Relay for triggering the radio's PTT.

3. Support for a Radio Busy signal so that the unit will not allow transmission while another person is transmitting.

4. Audio source to be a computer.

Any ideas or assistance would be greatly appreciated.

Slight change made to the program schedule on NOAA Weatheradio in Las Vegas.

TRAVELER'S FORECAST--broadcast from 5 AM until 10 AM...forecast for
San Diego has been removed from the traveler's forecast. Refer to the National
Weather Service in San Diego for the latest weather information in that area.
Current available cities: Los Angeles, Yuma, Phoenix, Flagstaff, St. George,
Cedar City, Salt Lake City, Ely, Reno and Fresno.

ALL OTHER BROADCASTS REMAIN THE SAME

CURRENT WEATHER--updated at :15 past each hour
LOCAL & RECREATION FORECASTS--broadcast 24 hours a day, updated four
times a day.
SHORT-TERM FORECASTS--available 24 hours a day, updated normally at 5 AM, 11
AM, 5 PM and 10 PM and when needed.
TRAVELER'S FORECAST--5 AM to 10 AM daily.
WEATHER SUMMARY--broadcast from 4 AM to 10 AM and from 7 PM to 11 PM
RECREATION SUMMARY--airs occasionally between 10 AM and 12 NOON.
WATCHES, WARNINGS, ADVISORIES and SPECIAL WEATHER STATEMENTS air if
needed....broadcasted only for Central & Southern Clark County & the Lake Mead
NRA.

Tests of the Emergency Alert System tone & NOAA Weatheradio warning alarm
device is normally conducted on Wednesdays between 11 AM and 12 NOON.
On the last Wednesday of every month, test is conducted at 3:20 PM. Advance
notice of the test is conducted two hours prior to actual test time.

I didn't say THAT about YOU....nor about several others....

> > The other
> > three are unknowns.
>
> So what, they still have an opinion. There was a time when YOU
> were an "unknown".

Okay....okay.....okay......so...three or four people
are "against" me? How many are contributors to
the group and to the hobby?

None, so what's your point?

Suppose it were ten? So what?
Suppose it were a hundred? So what?
```

Am I supposed to care if a handful of people "don't like me"?

You don't seem to care that NO ONE likes you, Smacksie.

Well....no one other than Boe, Tyler, and Flatted5th.
And I'm not sure that any of THEM actually respect or
like you. You're a pawn in some of their hands is all.

You poor, poor, fellow.

PS: Say.....what's this about you being able to suck-start
a Harley Davidson motorcycle? That's awesome! I always
knew you were talented somewhere.

THAT really bothers the shit out of you, doesn't it?

You ain't ever been booted off any Fido echo except
the one I booted you from. And that really sticks in
your gizzard, now doesn't it?

And to know that - just tickles the shit out of me
to this day. You sit over there seething and blowing
snot-bubbles as big as basketballs just warms my
heart to the point of eruption. I can hardly contain
my own glee, mirth, and joy at times.....

...just knowing that I STILL get to you for absolutely
FREE....no charge.

Heh heh heh heh..... and there's no lying about it,
Smacksie....I kicked your ass off the Fido Scanradio
echo and there wasn't a damn thing you could do about it.

...except seethe, snivel, and shit your britches.....

...and provide some wonderful entertainment for me.

heh heh heh heh heh......

You don't seem to understand, asswipe! Truth is self-evident.
The truth about you is cosmic and stands out like a freeway
billboard.

Things about you need no proof. No one needs to "prove"
that shit stinks. You just say it, and everyone agrees.
The sky is blue and everyone agrees. You are lower than
whale shit and everyone agrees. You are worthless and
everyone agrees. You have no interest in radio and everyone
agrees. Self-evident, Bunky.

Prima facie, Smacksie. And you are a quadrasexual...and at
least no one has disagreed on that yet.

> YOUR statement contain NO truth therefore contain NO credibility,
> as MOST of your statement are not credible.

Only in the legends of your own mind, Smacksie. You are a
hare-lipped, bucktoothed, snot-bubble-blowing wimp who has
no capability to acknowledge truth....or even recognize it.

<Laughing.......>

4711. Ireland??? Do you know any Freq's...Yupiteru 7100

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: "Gateway 2000 Licensed User." <bmcgon@indigo.ie>
Message-ID: <01bd3658$2ec498e0$78947dc2@dwoumbnf>
Source record: 170822

I was wondering if anyone could help me?
I live in Dublin and own a Yupiteru 7100.
Can anyone provide me with some ssb usb/lsb
frequencies I might be able to get?
Or does anyone know any Irish Frequencies
I would really really appreciate any help on this
Thank you..

4712. BC 210WX mods?

Newsgroup: rec.radio.scanner

Source record: 170823

I was just given an old bearcat 210 wx. Does anyone know of nay mods for this unit?

4713. New chat room

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: don l simpkins <donmax@gte.net>
Message-ID: <6bqav8bum1@gte2.gte.net>
Source record: 170824

I have been unable to find a good chat room for scanner users so I have created my own. It is on Irc.dalnet #scanning. I would like this channel to become widley know and maybe we could have meetings and talk about what is new in scanning such as products, laws, etc.

4714. IRELAND????

Can anyone help me with long range lsb/usb freq's
or any Irish Freq's
I own a yupiteru 7100 100hz--1650khz lsb/usb/am/fm/wfm
A list of any sorts would be gratefully appreciated.

4715. AR8000/2700 Interface and FRG9600 discriminator mods

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: donald@odcombe.XXXdemon.co.uk
Message-ID: <34e0c202.3650618@news.demon.co.uk>
Source record: 170826

Greetings folks - I'm almost back in action after some absence...Old & new friends, please note my new address.

I have now published the drawings and detailed step-by-step instructions on building your own interface for the AR8000
and Ar2700.

I have also published my step-step 'discriminator' mod for the FRG-9600 too.

If you want to have ago yourself take a look at
http://www.odcombe.demon.co.uk/rad_intro.html

Or just go straight to my home page and click the link to the Radio Communications pages.

4716. Re: Icom R9000 Wanted

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: zsmith1733@aol.com
Message-ID: <19980210212100.QAA04526@ladder02.news.aol.com>
Source record: 170827

>>
>>I have a 9000, but I don't think I want to sell it unless the price is
>>right. It's a great radio, but keep in mind you will pay a premium >>since
they are no longer available to the public. If you're >>interested, e-mail me
at:
>>hlm3@po.cwru.edu
>
>if you don't want to sell the thing, why in the heck did you bother >posting
this message? oh, i get it, you want to brag about the fact >that you have a
radio that you don;t know how to use.<<

And they are shit radios. Had one for about 4-5 months. It could have been
great, but Icom screwed up the design. Ever try to listen to AM and FM band in
the same searchbank with a 9000? Squelch settings are vastly differrent. What
good is the teeny-tiny capability of the spectrum display for anything but HF?
And we could go on and on and on....

4717. BC9000XLT AM Demodulator ?

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: gauger@dsuper.net
Message-ID: <34e0c648.2241663@news.dsuper.net>
Source record: 170828

Hi

In a way to improve my Acars reception I need to know where to tap the

output of the AM demodulator of my BC9000XLT.

Have you try this with your BC9000 and how ?

Gilles Auger

4719. Re: Scanner Antenna

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: Mike Stanton <mstanton@centuryinter.net>
Message-ID: <01bd365c$acb24fa0$69a541ce@cen11212>
Source record: 170830

I am using Radio Shack's best log-periodic TV antenna with rotor for my PRO-2006. It works very well, I am able to receive metro transmitions from Little Rock (120+ miles) and Memphis (100 miles) quite clearly.

One note though, it is best to install any TV antenna (used for scanning) with the elements running vertically up and down as opposed to their normal horizontal. This is easy to do by making up a simple "T" pole. You attach the antenna to one leg of the "T" and can install another antenna on the other leg of the "T" also......

Ron Nord <nordr@dsport.com> wrote in article <34DFDEBE.48EF@dsport.com>...

4720. ScanStar Commercial under Windows 3.1

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: jamulter@aol.com
Message-ID: <19980210221800.RAA13156@ladder02.news.aol.com>
Source record: 170831

Having used ScanStar Commercial for several years, I was under the impression that it would not run under Windows 3.1 or Windows 95.

For those with the same misconception, try entering the following command string under "run" in File Manager: c:\scanstar\ss3 windows

You can also load ScanStar directly into a scan file by adding the string "scan=<name of file>." For instance, if I wanted to go directly into a file called "widearea," I would enter the following string:

c:\scanstar\ss3 windows scan=widearea.ssp

I hope some of you other ScanStar Commercial users find the above information useful.

Jeff Multer, Fort Mill, S.C.

4721. FS: RADIO SHACK PRO 2035 (NEW IN THE BOX)

453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.500 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above

frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Starting at what frequency and ending at what frequency? Fixed or portable?
Low profile or don't care? Best answer: as much metal as you can get as
high as you can get it!!! For a portable try the MFJ two meter collapsible.

Rich,

That (Pro-2035/OS535/Probe review is what I call a thorough and well composed report!

Thank you very much for all the effort you put into creating easy-to understand and excellent reports on all kinds of scanning and shortwave-related equipment!

Regards,
Knut Otterbeck

Mike: What are you interested in decoding? CW? RTTY? My experience with the MFJ462 was that it was difficult to use, tedious to read and did not work as well as I had wanted.
My advice is to get a multimode data controller such as a Kantronics or AEA (used) or even an MFJ. If you don't have a computer, you can pick one up very cheap for well under $100.
You'll be alot happier with the larger display and versatility than what the MFJ462 has
to offer and it doesn't necessarily cost alot more money.
John

> the audio is downright anemic. Also,
>I've got to crank the squelch almost halfway before it kicks in. Are these
>problems (or are they features?) typical for a PRO-26 or do I need to exhange
>the one I have?

I also took my Pro-26 back for the same reasons. I also noticed that everything sounded off frequency , and I could not correct it with the oscillator adjustment. I picked up the last Pro-60 in Ct. for $149.95 plus I got a 2-year warrenty (for whatever that is worth) and the radio is very good. I did the extra 200 channel mod, so now I can put all of my mil-air freqs. in one "bank" of 200 without using up the whole capacity of the scanner! I just flip the switch over for the second choice of 200 memories.
See if a Rad Shack in your area has any left. They will look it up on their computer and let you know on the spot. I did have to drive about 25 miles to get mine but it was worth it. Good luck.. Bob

Some mods are similar because the microprocessor bd. is similar but the radios are not the same. I have both radios. There is Pros and cons for both I guess.

4733. JD100 Airband Questions

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: PJK <scouse@pacbell.net>
Message-ID: <01bd35ea$c0f457a0$5f56d7cf@scouse>
Source record: 170873

Hi,
Wondering if anyone got a Sporty's JD-100 VHF/UHF Airband scanner recently and could comment on it's performance. I used to know of a scanner in the UK called the WIN-108 which was a cheap but very sensative VHF airbander (with only 10 channels and an extremely slow scan rate). Even though it was low on the channel/scan side of things it blew away the competition because it was made just for AM reception in the 108~142 mHz range. Just wondering how this JD100 stacks up to the task of doing 118~142 and 225~399.97 being that it's a dedicated airband scanner.

Thanks in advance...

Please send replies to scouse@pacbell.net or leave them on the newsgroup.

PJK

4734. Edacs Success !

Newsgroup: rec.radio.scanner
Date: 1998-02-10 00:00:00 UTC
From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <01bd1d9b$deec33c0$f2554bce@default>
Source record: 170874

I have finally licked the Edacs problem, but was wondering if anyone else has gotten the program to tune a Optoscan 456 or similar setup ?
Specifically how is the audio ?
(I find the audio is not as good as with my Probe setup.)

The Edacs code I am using (The code posted back in December) has been modified somewhat but it now works. I am running a Pro 2004 for the input (control channel) and a Pro 2006 (with Optoscan 456) as the tuned radio.

Sorry guys but unless you live in Edmonton Alberta where I live my version will not work. I would be happy to answer any questions though as to how to go about setting up the program for your area.

Thanks

Kevin Fisher

I have one of the Sporty's scanners, and it works well, for the price. However, there are a few problems. First, there is no channel lock-out. If a freq. is programmed, you're going to scan it, whether you want to or not. Only way around it is to delete the freq. Second, the stock antenna is more sensitive on VHF than on UHF. An antenna from a BC3000XLT performed better on UHF. Being only dual conversion, it is very susceptible to intermod from pagers, etc. You have to be fairly close for it to be a problem, but if you live near a pager tower you could be out of luck. On the plus side, the radio is quite sensitive, the audio is superb and the price is right.

Dickie -

The reason he (Compania) does not know it to be a "commercial maritime"
callsign as you state is because it IS NOT commercial!

It was an amateur call.

Perhaps if you spent more time in study rather than flaming on this
NG you would KNOW these things rather than making an ASS of yourself.

Richard Kendrick wrote:

REPEATER MODIFICATIONS FOR POPULAR MOBILE RADIOS!

Information Sources has compiled an impressive collection of well written instructions for converting many popular commercial mobile radios into full repeaters. Some of the files, such as the MASTER2.TXT file (included below) which describes how to wire a Mastr II mobile radio for use without a control head, are original works and are copyrighted by Information Sources. The information may not be reproduced or republished via Internet, CD-ROM, or any other media without the express written consent of Information Sources.

The repeater modifications are available for sale on 3.5" HD floppy disk, IBM PC format only. All information files are ASCII text. The following files are currently offered on the Information Sources Repeater Modifications disk:

MICORDUP.MOD Converting UHF MICOR mobile radio into a repeater
MICORUHF.MOD Converting UHF MICOR mobile radio into a repeater
MICORVHF.MOD Converting VHF MICOR mobile radio into a repeater
GE_EXEC2.MOD Converting GE Exec II radio for repeater & 9600 pkt
GE_MVP.MOD Converting GE Custom MVP radio into a repeater
GE_PACKET.TXT 9600 and 1200 Baud packet on GE EXEC II and MVP
GE_MVP.TXT Basic MVP information and 1200 baud packet use
GE_MVPEX.MOD Another 9600 mod for GE_MVP (Complicated!)
MAXTRAC.MOD Converting the MAXTRAC for operaion on 900 ham band
MITREK.MOD Converting MITREK mobile for 9600 duplex packet
MITREK2.MOD Converting MITREK mobile radio into a repeater
MITREK.9K6 Converting MITREK mobile radio for 9600 packet
MASTRPRO.MOD Using GE Master Pro receiver strips for repeaters
MASTER2.TXT Wiring the Master II for use without Control Head
MASTER2.MOD Converting GE MASTER 2 mobile radio into a repeater
MOTOSPKR.TXT Adapting and wiring Motorola Amplified Speakers
WILSON.TXT Programming Wilson/Regency synthesized mobile rigs
BR.COM A simple DOS file viewing program for handy use
BABYRPTR.TXT Convert a Fisher-Price baby monitor into a repeater
LIST.COM Another easy to use file viewing utility program
PKUNZIP.EXE Dearchiving utility program to use with *.ZIP files
PD-203.ZIP Shareware program for POCSAG (pagers) monitoring
PE-205.ZIP Shareware program for POCSAG encoding(transmitting)
\DECODE*.* PD-203.ZIP file de-archived - POCSAG decoding
\ENCODE*.* PE-205.ZIP file de-archived - POCSAG encoding

The following is a reproduction of the MASTER2.TXT file which is included on the Repeater Modifications disk described below offered by Information Sources. The MASTER2.TXT file describes how to wire the GE Mastr II mobile radio for operation without the control head and control cable.

Wiring the GE Mastr II without Control Head

I'm sure many of you out there already use Mastr IIs without control heads but there are probably many who are not too familiar with this radio. There was a recent article about using the Mastr II mobile as an emergency intermittent duty repeater by Terry W. Ellis in the September 1993 issue of Mobile Radio Technology Magazine. The article did not elaborate on wiring the Mastr II without a control head. It can be done. I will not go into the modifications needed for repeater operation. Rather, I will just explain how to wire the Mastr II radio for operation on a single frequency without the control head.

1. Ground (called A- by GE) comes out to pin 30 or pin 21 on J901 the Main control plug on the front panel of the radio.

2. 13.5 volt DC must be connected to pin 29 (called A+ by GE) and pin 24 (Ignition Switch) of J901.

3. The Tx PA supply is separately wired to the big red and black wires at pin 39 (TX+) and pin 40 (TX-) of J901.

(NOTE: Be sure to use fuses for both the PA and the low current Rx and Tx exciter even when testing and wiring on your bench. I was lucky and only smoked a few small traces on the Mastr II front panel board which I was able to bridge with new wire. The damage could have been much worse. Reverse polarity diode protection (like the PA has) would also be a good safety practice for the rest of the radio unless you like the smell of burning radio parts!) (I'd suggest 15 or 20 amp (for lower power testing) on the PA and 2 or 3 amp maximum (for testing) on the Rx and Tx exciter.)

4. The volume and squelch controls can be made with internally mounted 10k trimpots. High side on both vol and sq connect to pin 11 of J904 RX/IF/AUDIO/SQ board. (GE conveniently labels all the pins connecting the major sub-assemblies to the front panel and system board of the Mastr II.) Low side vol and sq connect to pin 12 of J904. Sq center control arm is connected to pin 10 of pin J904. Volume center control arm is connected to pin 13 of J904.

5. The frequency or channel is selected by taking the F# pin to ground. Grounding either the Tx or the Rx F# pin also grounds the corresponding F# channel on the other Tx or Rx. (I guess you could rig the radio for multi-channel use by making a multi-select switch for each channel to ground.)

6. Audio (Speaker) output is taken from J904 pin 19. Pin 18 of J904 (labeled Speaker Low) is connected to ground. Connect an appropriate loading resistor (8 to 20 ohm 1 or 2 watt minimum) to prevent audio amp oscillation if you do not have a monitor speaker connected as with packet, etc. Speaker audio could also be taken from the red test jack as explained in the next step.

7. PTT and mike connections can be taken from the red test set jack, J905. Here is the pinout:

Pin 1: Speaker high (Audio out) Pin 6: A- (Ground)
Pin 2: Speaker low (ground) Pin 7: Microphone high
Pin 3: Regulated 10 volt Pin 8: Microphone low
Pin 4: A+ (13.5v) Pin 9: A- (Ground)
Pin 5: PTT Pin

Note: The radio keys by taking pin 8 on U901 (10 volt regulator) to ground. If you operate the Mastr II WITHOUT the CHANNEL GUARD strip installed you will need to jumper pins 6 and 8 on J908, the Channel Guard plug in card. If you try to key the radio at the meter jack without the Channel Guard board installed you won't get anything except frustration. I was dumb-fuzzled for almost a week before I noticed this one little bridge on the schematic diagram of the front panel board. Lesson: If you intend to use Channel Guard keep the card installed when you test the radio. If you do not use Channel guard, jumper these two pins so the PTT will work properly from the red metering jack, J905.

To kill Channel Guard (e.g. for tuning or testing the receiver) take either Pin 6 of J901 (front panel plug) or Pin 3 of P908 (Channel Guard plug) to ground.

Having a schematic diagram for the Front Panel & System board for the Mastr II is certainly a great aid. It is very difficult to trace out the connections without a schematic since the board has circuit traces on both sides and uses a number of holes to pass circuits on both sides of the board.

I have found an easy place to drill holes for wiring access is on the black plastic front panel main wiring connector. There is an area on outer side of the two big pins to the Tx PA which can be drilled out to pass control wires. I tried to solder directly to the pins on the main connector without much success. I like the internal wiring better. (Note: Molex pins slide very nicely over the pins on the Mastr II front plug. Use heat shrink over the connectors to avoid shorts and add a neat appearance. Also, you can solder directly to the large pins for TX PA by scrapping off the plating and soldering directly to the bare brass pin.)

All the information on the disk is believed to be accurate, however some errors may inadvertently appear and the user assumes full responsibility for the use and application of all the information contained on this disk. No warranties of any sort are expressed or implied. Referral to the appropriate service manuals for the various radios discussed is certainly recommended in every case. The information on the disk presumes the user already has familiarity with the radios discussed, and hopefully, a copy of the service manuals for the radios.

In case service manuals for the radios of interest are not available to the user this distributor has prepared concise written and illustrated operating guides for the General Electric Executive II radios, Master II radios, and Custom MVP radios. Each guide runs about 20 to 25 pages in length and contains necessary schematic diagrams, exploded parts diagrams, tune-up instructions for VHF and UHF radios, and repeater modification instructions with diagrams, as needed. The guides are available for $15.00 postage paid when purchased separately, or for $12.50 when purchased with the repeater modifications disk. (See special pricing offers following the order form, below.) Much of the information on the disk is included in the GE operating guides, but the guides additionally include tune-up instructions, schematic diagrams, and additional helpful hints which are not included on the disk.

The Repeater Modifications disk is available by mail by using the order form below:

John,
Scanner radios must bother you ALOT, seeing that you have (at least for a year) avoided talking about radio`s, scanners & anything else related to them.
Can you talk about them, or is it like talking `bout the *Boogie man*, and scaires the hell out of you?

Just wondering,
Charlie

Question for the group;
I would like a discriminator tap/PC interface so I can do the MDT thing.
I'm not wise to scanner innards. Is it poor taste/illegal/stupid for me
to go to a radio repair shop and ask them to do it? Is there a
particular lingo to use when asking them to do it?
Thanks in advance!

4753. McDermott facing suit on tape leak of Gingrich cellular phone call

McDermott facing suit on tape leak

by James V. Grimaldi
Seattle Times Washington bureau

WASHINGTON - A grand jury's investigation of Rep. Jim McDermott on allegations that he broke a federal electronic communications privacy law has skidded to a halt.

But an unprecedented civil case against the Seattle Democrat is revving up.

More than a year has passed since the eavesdropping on a cellular phone call with House Speaker Newt Gingrich, R-Ga., and the leak of the tape to newspaper reporters.

Ultimately, Republicans called for the prosecution of McDermott - the alleged leaker who got the tape through the course of his work investigating the speaker on the House Ethics Committee. Distributing a recording of an illegally intercepted cell-phone call is a criminal violation, though not a felony, under the Electronic Communications Privacy Act.

McDermott has not commented directly on the case.

But his defenders, including some who know McDermott only by reputation, say that if he did give the tape to journalists, he was justified because of what many believe was on it - evidence that Gingrich violated terms of a plea-bargain agreement with the special counsel investigating the speaker's ethical abuses.

Tomorrow, the case will take yet another turn when the Federal Election Commission is expected to give Rep. John Boehner, R-Ohio, permission to use political campaign funds to file a civil suit.

If Boehner sues McDermott, it would mark a historical precedent - the first time a member of Congress has sued another member. The suit could give Boehner the power to gather evidence and depose witnesses in what could become a messy partisan affair.

"This may be the first time in history that an aggrieved congressman, instead of just debating his colleagues, has sued another congressman for damages," said Charles Tiefer, former deputy House counsel under the Democrats. "Some consider it a further breakdown in the minimum levels of civility in the institution.

"It may not sound very civil to rant and rave at a colleague on the floor of the House," Tiefer said, "but it is a lot more civil than making a federal-court case out of it."

Meanwhile, the criminal matter has been stalled since last summer when the case landed before U.S. District Judge John Penn. That's because Penn, who was the District Court's chief judge at the time, was asked last summer by McDermott to quash the grand-jury subpoenas of House staff members.

McDermott's attorney argued that the staff members are protected under the speech-and-debate clause of the U.S. Constitution that gives a form of official immunity to members of Congress conducting official lawmaking duties.

Penn has not acted on that and another key motion, according to both Democrats and Republicans familiar with the case. Because the case is in front of a grand jury, details and explanations are scarce. Penn did not respond to a reporter's inquiries.

Ironically, Penn's deliberate pace on the McDermott case has prompted action on another front.

Not willing to wait, Boehner, chairman of the House Republican Conference and the person whose cellular telephone call with Gingrich was illegally recorded on Dec. 21, 1996, has moved ahead with plans to file a civil suit against McDermott.

The Federal Election Commission's general counsel has advised in a draft opinion that Boehner is within his right to use political funds to bankroll a lawsuit against McDermott.

"The legal expenses at issue would not exist irrespective of Mr. Boehner's duties as a federal office holder," the draft opinion states. The commission only rarely changes draft rulings and isn't expected to do so tomorrow.

If the FEC does give Boehner permission to use political funds for the suit, as the House Ethics Committee did in December, he probably will file within a month or so, said Michael Carvin, Boehner's attorney.

Under the electronic privacy act, a victim is entitled to seek $10,000 damages and punitive damages. Boehner does not have a case for actual damages unless he can demonstrate the release of the taped phone call caused him to lose money or income.

But the risk to McDermott probably extends far beyond a $10,000 judgment.

A civil suit will give Boehner the opportunity to seek information, depose witnesses and aggressively pursue the facts, which, if they become public, could become embarrassing not only to McDermott but also to other Democrats involved in the handling of the audio tape.

"We expect in this process we will find out more about what happened and who was involved," said Terry Holt, spokesman for Boehner. "If people were involved and they broke the rules of the House and they broke the law, then they have to pay for it."

McDermott was the chief Democrat on the House committee investigating Gingrich when a Florida couple who had illegally made the tape found their way to the committee offices in the basement of the U.S. Capitol and gave the recording to McDermott in January 1997. In April, they pleaded guilty to an infraction, paid a $1,000 fine and agreed to cooperate with federal authorities if prosecutors would not charge them with other crimes.

4754. Q: Mounting in Jeep GC?

Newsgroup: rec.radio.scanner
Date: 1998-02-11 00:00:00 UTC

I have a Jeep Grand Cherokee, a few years old. I'm starting to toss around ideas as to how to mount radio pieces of equipment in terms of radios/scanners/etc.... Just curious what suggestions people have for cars of this type. At some point I was going to put a 6CD changer in the console compartment, aside from there, when I look at the dash/console, I can't seem to find any surface area for a radio, short of sticking stuff on top of the dash which is always a last resort. Any suggestions, preferably via email, would be greatly appreciated. Thanks.

After using "tabletop" scanners for the last 25 years, I have finally desided that it was time to buy a Hand Held. Because my company is located not to far from an airport, I was wonderring what you folks would recomend that would give me the capabilty to listen to Air Traffic Control, but is not that expensive. I'm not looking for "top of the line", but something that is good but cheap.

How 'bout an educated guess? John, ...you're single, slightly overweight, and you're employed at some type of "Joe-job" that doesn't require excessive contact with the public other than making change or collecting a fee. There's a good chance that you're employed in a maintenance capacity, quite possibly with the city, county, or State of Oregon. Whatever it is, you're going no-where, and you spend your days avoiding all the human contact that you can.

At home, you've got a sink that's constantly full of dirty dishes, with a trashcan also filled, you havn't gotten around to taking it to the curb yet. You've got fast food containers and uneaten food in most rooms of your dwelling. You've also got tons of magazines stacked everywhere. The inside of your car is a shit-hole crammed with junk permeated with your particular stink.

And you stink. You wear shirts for days at a time before washing them. You wear clothes that you picked up off the floor that morning. You use your toothbrush, but you don't floss, and that's causing your teeth and gums to rot, or at least that's what the last dentist you saw told you...five years ago.

Stop reading this message and look around the your room. Do you see the things I'm describing? I really believe you need help John.

4758. Help with a PRO 2021

Newsgroup: rec.radio.scanner
Date: 1998-02-11 00:00:00 UTC
From: Barun Gupta <barun@worldnet.att.net>
Message-ID: <6btnmc$db2@bgtnsc03.worldnet.att.net>
Source record: 170599

I recently bought a used PRO 2021 off the internet from someone claiming that the radio was in good working condition. Everything (as far as I can tell) seems to work fine except the search function. In the search mode, I can turn the squelch all the way down and the scanner will not pick up a known frequency. In fact it will not even break the squelch with static!!!!!! I have tested it with differnt antennas, with a second scanner as a control (to ensure that there is something on a particular frequency) as well as testing the scanner in SCAN and MANUAL mode for a particular frequency. For example, if I have a cordless frequency of say 46.970 that is active and I put that into one of the channels, I find that I can monitor that activity in MANUAL mode, in SCAN mode get it to stop on that channel, but if I put upper/lower frequencies that cover 46.970, I cannot get the scanner to break squelch on this frequency. Anyone out there that might have an answer?

What are you willing to do? Consider radios with remote detachable faces and remote mounting kits - that's how I mounted my Alinco dual band two-way, and an Icom HF rig. Mount the control head on the dash somewhere, and stow the radio chassis under the rear seats. It sure makes things easier. And cell phones go well on stalks with hands-free cradles.

Good luck,

Doug, N6XQY

Pin 12 is the discriminator pin for NFM and pin 13 for AM. Usually you would only need to tap pin 12. There are a few places that are a little ways from the chip which allows you to solder without too much trouble. I will try to show with ascii art...please bear with me!!!

```
_________
_| 1 |_
_| |_
_| |_
_| |_
_| |_
_| |_
_| |_
_| |_
_| |_
_| |_
____| 12 |_
_ | |_________|
| X| _____
| XXX |
R R C | R R| C C C
2 2 2 2 2 2 2 2
1 1 1 1 1 1 1 1
2 1 6 5 6 9 8 3
```

Don't solder directly to pin 12. Solder off of it a bit, there is a pad as you might see marked as 'X'. Also below the chip there is a row of 8 resistors and capacitors. The 4th & 5th component from the left is R215 and R216 respectively. There should be a fairly good size pad above these resistors which is the same schematically speaking as pin 12. I indicated this position as 'XXX'. R215 is a 27K and R216 is a 10K. You can also tap where it is indicated at TP203 but that point is after the discriminator is run through R216.

Sorry for x-posting...just replying to the original post.

The best way to open up this 520-760 gap is build a frequency converter yourself complete with bandpass filters (BPFs). You might raise these freqs up 400 MHz and be able to listen to them from 920-1160Mhz. The Pro-2042 does not have the stock BPFs that allow you to cover this range to begin with. There are several other mods available for this scanner: Improved Squelch, Data Tone Squelch, S-meters, memory mods, computer programming, computer interfacing, etc.

Diet 9 News Release

Diet 9 News, the one-calorie newscast, has announced the Police Chase Channel....

Due to the four police pursuits we have watched in Los Angeles this past week, three in the last 24 hours (one semi, two five tons and a pickup truck/minivan combo), Diet 9 News will devote all of its resources to covering police chases, as it happens.

Diet 9 Team Coverage means that we will pull off of beach house damage stories, live remotes from the Federal Roybal building, or the latest Ginbsberg News Conference. We will cover the chase, "From Dispatch to Impound, to all of Southern California...."

Diet 9 viewers will be allowed priority service to call LAPD Dispatch, claiming they saw the suspect with a gun, to give officers advice (shoot the tires out) in which dispatchers will dutifully relay information to overhead air units.

Diet 9 anchors, such as P Harvey, will proclaim intimate knowledge of police chase procedures, and will correctly, misidentify all agency logos and frustrate all scanner enthusiasts (who can tell an agency from the numbers on top a police vehicle, as well as the number of antennas)

The Diet 9 Newschat will also allow viewers to send emails directly to pursuing officers MDT's, and created live chat sessions with incident supervisors. Diet 9 anchors are also pursuing a Live Vote section, to answer real-time if officers should employ spike-strips, fishtailing or blocking traffic manuevers, active vs. passive pursuits, and allow team coverage participants to rate the chase on technical and artistic merit, compared to others covered that week.

Diet 9 News is an equal opportunity, team-coverage, employer. You don't need any knowledge, just a good head shot.

The closed captioning of this news release was sponsored by The New Club, recommended by law enforcement the world over....

Glad to see you finally are admitting to the FACT you have YET to post anything even slightly germane to the topic of this newsgroup. I figured you would continue with your lie that you contribute on here. Not to post incorrect information, I checked and found that so far in 1998 you have already posted 249 messages on this group. You were right though, you have YET to post anything even slightly germane to the topic of this newsgroup. 249 messages of pure John. BTW, since September of 1997 you have posted 732 messages on this group. Only three can be even considered close to being scanner related. Three for 732 John. You must really be proud!

> All you have posted to this NG is your WHINNING & BITCHING, nothing
> positive or constructive.

Doesn't that make you two best of pals? Common interests and all.

> > OR manage to succeed at a single challange put to you.
>
> Then you are with lying or not paying attention.

With lying??? I noticed in the 10 or 12 messages you posted tonight you seem to be having problems being coherent? Are you under the influence?

> What challenge have I NOT met on this NG?

Off hand I recall you being challenged to post your E-mail address at your ISP, the Sprint one not the USA.NET.

Also many (not counting Bill Cheek) have challenged you to post your credentials. Hmmm, I wonder why....and what excuse and song and dance you will come up with now.

Would you like a count of how many different posts were in support of you? Against you? Last count it was running at a ratio of about 34 to 1 against you. That is only going back to 11/1/97. Just about says it all, ehh John?

Don't get me wrong John. I don't really care if you post 300 messages of crap a month (like last September or was it October?). Anyone that would put on a display like you have in this group is certainly a case to be studied. How many people other than yourself would spend Holidays posting flames on RRS? Only you!

For out-and-about use, you'll probably find the Watson W-889 a good
buy. Durham Radio in Canada sells the Watson line these days.

Radio Shack will sell you a rubber duck similar to the stock
antenna you're trying to replace for about $20. Just tell
them to look up the part number for the PRO-64 antenna
which should be the A0337.

For best reception while at home, a good telescoping whip like
the ANT-19 or ANT-8 from Grove works nicely.

For more on antennas, see my antenna page

http://www.qsl.net/n2mca/ANTENNA.HTM

For dealer resources see the links at the bottom of my

I agree. and have experimented with many different combos of antennas

and feedlines. The 'standard' inexpensive scanner such as the rat shack 2004 and 2006 both are very broad at the antenna input. Thats why they come (came) with a simple telescoping antenna whos imp is all over the place in relation to the received frequency.

Don't do it. WD-40 can go rancid, especially when it heats up, and the
last place you want it when that happens is trapped inside your pots.

Use something made for contacts like Caig DeOxit or Preservit.

> differently.

I was talking about the maritime callsigns the first time. It is *you*
who
can't follow the thread. I've told you before, Toilet Boy, drinking the
blue water from the toilet and prozac don't mix. Your brain is so
befuddled you can't even get that straight.

> > when I was at the KX6 location (which you still haven't identified the

>
> A few messages back you were asking "Compania" to identify those, NOT
> ME, get your plans straight.

The two of you are one in the same person. Your schizophrenia is caused
by getting pumped too much by Richard Simmonds and prozac abuse, and is
your problem. I also asked you to identify the location of KX6,
another challenge you have failed to meet.

Rule of thumb. The metal you are soldering to must be hot enough to
melt the solder in order to get a good joint. I use a rat shack 35
watt pencil iron and .062 inch 60/40 solder. The "fry" temp of most
chips is hoter than you can stand with your touch. Spec sheets give the
max temps at which a junction within a chip can withstand. I some times
sink the heat with a wet glob of paper towel on the chip. You must
have everything clean before you start. make sure the iron tip is
sharp pointed and well tinned, make sure the chip pin has no oxiadation
or crud on it, clean and tin the wire you are going to attach. Get
everything clean. Get the iron up to temp, wipe the tip with a wet
rag, sponge, or paper towel to remove excessive solder and crud.
Use good light and a magnefing lens. I sometimes do a dry run with a
cold iron to make sure I can get to the location without touching
other pins and components. Once the pin and wire hace been tinned
have a small quanity of solder on the wire. By the way use a wire
as close to the same size as the pin or smaller as possiable. The
build up of solder on the wire should NOT make the wire wider than the
pin. Form the wire to get max contact area to the pin.
With everything ready and the iron tip free of excess solder lay the
wire on the pin. Touch the irons tip to the wire and let the solder
flow. Remove the iron and hold the wire still till the solder sets.
Doesn't hurt to blow gently at this point. By the way don't breath the
solder fumes they may contain lead.
Gently tug on your connection to mane sure you have a good joint. Check
to see if you have shorted out anything or burned anything around the
area. Dress the new lead towards the Jack you have mounted om the rear
of the scanner. You may want to install a .1 ufd or .01 ufd in series
with this lead to isolate its DC. (I don't, I do my isolating on the
interface board that way I can use the DC output of the descrim chip
for measurements.)
Have fun, all this can be done with a 10,000,000 watt iron if you are
fast enough and have a fine enough tip.
One more suggestion you can practice on a junk peice of gear eg. as
an old tv, radio, walkman, ect.

I'm not making a joke or a flame Charles so don't thake this wrong.
The reason you see them so much is that you live in or very near a
high crime area. You must live on the southwest side. Lots of activity
out there. Also the near east side, northwest side. If you lived in
Pasadena you would hear foxes belonging to PPD almost continually.
I live in Seabrook and it is fairly quite around here. Just hiway 146
stuff and some fam. disturb. calls.
gosh you'r lucky ;-)

What sort of mods did you have in mind? The scanner does most anything I can think of. The only thing missing is computer control. It's certainly possible to do that. So, I guess the answer to your question is, "Yes, there are useful mods."

: ^^ Have it done at a reputable shop!

: ^^ What will it cost to have a single tap done? $20-$40?

: ^^ How much to replace your radio? $200-$500?

If you DO the mod yourself, don't solder to the chip pins, unless there is
NO other way.
Usually, if you follow the circut trace from the chip pin, you can find a
better spot to use.
Also, on many scanners, there is a test point near the chip which is a
suitable pick-off point.
If this is the case, it is the EASIEST and the SAFEST way.

The early units (835) had a problem with the center pin in the rubber antenna BNC connector breaking off. There were also many reports of receiver sensitivity being poor in the earlier units, possibly due to supression of cellular freq. images.
If you have any information regarding the newer production runs of the 835 or 895 models, I'd like to hear from you.
Please also let me know if your information is opinion or facts based on i.e, sensitivity tests using a station monitor device etc.
Thanks

>GizMo

>gizmo4u@juno.com

I use 75 ohm cable TV quad-shielded cable for my high-frequency scanners and it works MUCH better than 50 ohm cable of similar diameter.

This is mainly due to the charateristics of the "common" cable types. If you are using common RG-58, it can exhibit terrible losses at frequencies of 100Mhz and above, and the shielding won't stop the coax itself from becoming part of the antenna system!

With quad-shielded RG-6 style 75 ohm cable TV coax, you have a feedline that is guaranteed to be 100% shielded (maintaining its "feedline" status) and is has been DESIGNED to pass frequencies up in the hundreds of Mhz for video on cable systems.

I had terrible interference and noise problems when using RG-58 for a high frequency scanning receiver (IC-R7000), and when I switched to quad-shielded RG-6 (from Radio Shack of all places), the near-field electrical interference dropped to virtually zero and my reception was improved immensely! (This is using an attic-mounted discone antenna two stories above the radio).

All of the interference I was receiving THROUGH the coax due to co-located computers, other radios, test equipment, hi-fi gear and appliances is now virtually gone and I can use the radio much more effectively and with more satisfaction!

For RECEIVING, the characteristic impedance doesn't mean squat really, the shielding and dialectric construction of the cable are far more important in REAL life. It might be arguable with a slide-rule or calculator, but it WORKS, that is what counts (not what other people may think about it intellectually).

I simply used standard 75 ohm "F" fittings with "F-to-BNC" or "F-to-PL-259" adapters to connect to the radio. It works for me!

IMHO

Steve

I am not law enforcement but from my experience her in Kern County the Sheriff's department uses 'Gold 5' as a repeater channel on their system as channel 5. Mostly car-to-car. The police department and CHP use 'Gold 1' as simplex. I hear the CHP using this quite a bit to contact the sheriff helicopter on the chp handhelds. As for 'Gold 22' II think it is only used in the LA basin as that was originally a TV channel.

As for CLERS, I have never heard any traffic on 155.910 for Kern County, but lots of traffic on 155.070 from Tulare County (mostly inter-agency station-to-station)

Hope this helps...

Try these:

WCCO-TV 4: 450.95, 170.15, 450.65, 450.0875, 450.1125
KSTP-TV 5: 161.73, 166.25, 450.55, 450.80
KMSP-TV 9: 450.45, 450.25
KARE-TV 11: 161.67, 450.15, 450.85

Good luck!

Hello,

I am planning a trip to Buffalo NY and I really need some help. I live in the long island area and can't seem to find much of what I need in Police Call. I would like to know if any one has a list of Police Freq's with PL's for the Buffalo/Amhurst area. By the way any other info on Freq's for the Buffalo area would be apreciated. Thanks

4816. Edacs Success - Update

Newsgroup: rec.radio.scanner
Date: 1998-02-11 00:00:00 UTC
From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <01bd1e31$31d02fc0$0f4722cf@default>
Source record: 170770

To those of you that wanted Edacs information.
(The general steps to getting an active Edacs tracking system)

First you will have to build the splicer (not that hard but be very careful when doing assembly ... it is worth taking your time.) I suggest using the Trunker program first to see that the splicer is working OK.

I found that my splicer was working fine but Edacs didn't work. (Just as it was downloaded from the newsgroup). I had to slightly modify the error handling to get the program to work.

see line: (Increase the number of mismatches)

/* if there are less than 4 mismatches with sync pattern and we aren't */ /* inside a data frame (hold-off counter less than 288) sync up */
if (nh < 4) { /* mode zero means we're monitoring control channel */

(Don't go too high or it will cause problems !)
If 3 works then leave it, otherwise increase it a number at a time.

Next you must determine all the frequencies in use by the system. Easy just look for the trailing beeps !

Next run the Edacs code as was posted in this newsgroup. What you are looking for is the relationship of the LCN numbers to the actual frequency. (This may be the tough part depending on the system).

ie LCN 1 to 866.0375 etc (Will vary by system)
LCN 2 to 866.3125
LCN 3 to 866.7875

I have found that on my local system this relationship doesn't change.

This can be done by sitting on a particular frequency on your system and watching for input on the screen when the frequency becomes active. This works best when there is little action. (Try at night !)

What I have done with my system is allow the input of an ID into the system (using a prompt before the program starts) and when that ID comes onto the screen then the program tunes a properly equipped radio (R7000,R7100,Optoscan 456) etc. to the frequency that the ID is on the screen. This allows the following of an ID's conversation.

If anyone has specific questions please email.

Hope this helps

Thanks
Kevin Fisher

Hey Andy, looks like you've caught the bug. I remember when I first got serious about antennas on a scanner a few years back. I started out with a cheap BC handheld and wondered what was really out there if I had a decent antenna. I experimented with quick and dirty wire antennas first, which should give performance similar to your bathtub (hhehe). It helped a lot but you can expect yet another magnitude of improvement with an outdoor antenna.

If your not really deep into electronics theory, just go with an outside TV antenna. They work great. As a matter of fact, unless you want to listen to just a small range of frequencies, the TV antenna is the best way to go if you don't want to spend big bucks. I would recommend a log-periodic type TV antenna. I use one from Radio Shack with a cheap ($65) rotor. It does just great from about 50 MHZ on up. All you need to get set up this way is the antenna, cable, rotor, rotor cable, some RG6 cable, and an adapter to convert the TV type F connector to the BNC type that is probably on your radio.....

Have fun....

I just wanted to offer a little more information on these Nickel/Metal Hydride cells. It is true they do offer a lot more energy density than the conventional NiCd cells. However, these cells are not (as yet) capable of supplying heavy current discharge ratings. They should be a great choice for receivers. They may not be so good as transceiver cells though. I would certainly use them in a scanner if the additional cost doesn't matter.

>(you know the drill,delete the band (spammbuster))

Go to a Blonder-Tongue or Weingard dealer and get some Antenna
amplifiers (one for each antenna) and a splitter/combiner. The idea
is to point as many individual antennas as you need, feed each through
their own amplifier, then combine the outputs of the amplifiers into a
single antenna downlead to interface into your house cable wiring (if
the whole house is wired) or directly to your TV set.

I did an installation in the Bahamas this way (before Satellite TV was
launched back in the 70's). From the Bahamas, there are a number of
U.S stations that can be picked up over-water with a good antenna
system, but they are widely separated across the western horizon. We
put 4 different antennas on a 40 ft. tower, each special ordered and
CUT to the specific frequency of the station that was desired in that
direction. Each antenna was fed into an antenna amplifier/filter
(tuned to the same channel frequency) then all amplifiers were summed
in a combiner to a single cable that went into the house/hotel to
drive a small in-house cable system.

I don't remember how far away the Bahamas is from mainland U.S.A.,
but this system yielded watchable pictures from all the major networks
where only one Miamai station was "sometimes viewable" on a standard
TV antenna before.

Your situation isn't as severe as this, but the basic concept is the
same!

>> have used it in the past (on other people's stuff, hey I didn't charge
>> them) but don't know about longer term effects.

WD 40 is a Petroleum based product (says so on the can). Why in the world would you want to spray a lubricant "oil" on pots and switchs? The idea is to clean them, not lubricate them. Same thing with Silicon based sprays. They coat the contacts with a non-conducting film and that's not what you want.

Many of you will have files to share. I suggest the following:

Send a message to the list. Tell the list about your file and ask anyone
who wants a copy to email you privately. Then you can email only that
person the file, instead of the entire list. Alternatively you can place
your file on a web page and post the URL to the list.

From the perspective of the user, Warpgate is *his* ISP, as in Internet Service Provider, moron. Overdosing on the blue water again, Toilet Boy? Therefore, I go back to my original statement (which you are trying to avoid):

You've stated on different occasions that ISPs don't care what their clients do and on other occasions you claim ISPs will dump clients who cause trouble as you described above. You can't have it both ways, Toilet Boy. I know this is a real hard question for you (it requires thinking), so which is it, hmmm?

> Relm 200 HS.

The audio problem doesn't bother me much, but it's mainly because of my situation. At my desk there's almost no background noise but I use an external speaker anyways. In the car I have the cassette adapter (I usually turn my stereo off when I turn my radios on anyways). And I use the earphone at events even if it may not be necessary, since others may not want to listen.
Yes, these problems could be more significant to others, but it fits my purposes well. And I like the full coverage. If anything you can always put an earphone in, but you can't always mod it for extra frequency bands.
I just had to put this in because I like the 26, and I haven't had any problems with it yet (although I don't know how it compares to the Relm).

Just a thought.

Stefan, you are mixing your arguments, God was disappointed in man because man chose to serve the creature (himself and his environment) and not the Creator. Who is better, the creature or the Creator? You or God? And why is it that you insist that God's Son (or in your reference "so called son") is a "Bastard"...is it that you believe that God could not incarnate His Word? Don't you know that God's creation is a work of words? In the Beginning was the Word and the Word was with God and the Word was God...He was in the beginning with God....ALL Things came into being by HIM (God's Word) John1:1-2. It is with words (our own) that God has made a way for your salvation and all of mankind's (Romans10:8-10). So who is it that should "give a shit" about all these things that are happening? You are right that IT IS Written in God's WORDS that all this WILL happen and MUST happen before ALL Scripture will be fulfilled, and then comes man's JUDGEMENT. Who will you serve, the creature or the Creator? You hold your own destiny in the power of your words whether they are written or spoken....That is why I "give a shit"

Stefan, you are mixing your arguments, God was disappointed in man because man chose to serve the creature (himself and his environment) and not the Creator. Who is better, the creature or the Creator? You or God? And why is it that you insist that God's Son (or in your reference "so called son") is a "Bastard"...is it that you believe that God could not incarnate His Word? Don't you know that God's creation is a work of words? In the Beginning was the Word and the Word was with God and the Word was God...He was in the beginning with God....ALL Things came into being by HIM (God's Word) John1:1-2. It is with words (our own) that God has made a way for your salvation and all of mankind's (Romans10:8-10). So who is it that should "give a shit" about all these things that are happening? You are right that IT IS Written in God's WORDS that all this WILL happen and MUST happen before ALL Scripture will be fulfilled, and then comes man's JUDGEMENT. Who will you serve, the creature or the Creator? You hold your own destiny in the power of your words whether they are written or spoken....That is why I "give a shit"

My PRO-26 has as much volume and is as clear as any other scanner I have had.
I have a RELM 200 and it works fine , but not as good as the pro-26. If you don't care for cel reception the Relm is fine. The relm is strange because it is a duel conversion receiver but I can't seem to find the best place to get the image freqs. I have found only 7 active image freqs. for cel. The Relm is strange to program also.

Bill,

California's Fish and Game Regulations expressly forbid the
importation of non-native animals without the proper permits.
Such permits would be unobtainable in John's case due to
him being of indeterminate species.

4858. New Chat Room

Newsgroup: rec.radio.scanner

I have been unable to find a chat room that is active for scanner users. I have created one on Irc.dalnet #scanning. As of 02-12-98 there have been 6 new ppl on. Everyone seems to be getting on around 9:00 p.m. central time. If we can get more ppl and start talking we could have lots of fun talking about: New laws, Who has what scanners, Frequiences, tips, and who scans what. I have met some interesting ppl in the last few days. Come and check it out any time and try to come on around the time given.

4859. Please help BC200

That would be it. The newer version BC200xlt's have a surface mount
resistor instead of the barrel type. 103 on the resistor is the same
as the 10K....10 x 10^3....103. Simply unsolder this resistor. The
scanner probably has a manufacture date of OAID or something close.

STICK WITH THE SILICON BASED CLEANERS designed for cleaning
potentiometers!

WD-40 & other petroleum based fluids will make you think you solved
the problem for a short time then the problems return worse than before
because petroleum fluids ATTRACT dirt & dust.

Anyone who would recomment WD-40 for cleaning potentiometers
does NOT know what they are talking about!

Good luck!

yea, this is a common issue Bill tries to push to others. He thinks
WD-40 is good for cleaning volume, squelch, & other pots. It does
ok for a short time, but then brings the problem back MUCH WORSE
at a later time.

WD-40 tends to ATTRACT dirt & dust.

Once again, Bill Cheek shows how little he really knows.

RCL1 wrote:

NO NO NO NO NO NO **NO**

WD-40 is NOT something that should be used on potentiometers
AT ALL. Sure, it will remove the problem for a short time, then
the problem returns WORSE than before. WD-40 is petroleum based
& ATTRACTS dirt/dust.

Your 30 years HARDLY has done any good, has it?

I understand that in the last few years, the Hurricane Hunters have
NOT been using their widely-publicized HF frequencies, opting instead to
make contacts on GHFS frequencies. When the hurricane season opens up,
the World Utility Newsletter listserver would be the place I would go to
get a list of where they can be hears.

You can order replacement antennas for your scanner at Scanner World on
the internet:
http://www.scannerworld.com

Generally speaking, Radio Shack doesn't carry replacement rubber duck
antennas for handheld scanners. They have to special order them.

Are you sure it wasn't the antenna connector on the radio that broke?
Rubber ducks are pretty durable.

Hope this helps.

4876. More Weather Radio ???

Newsgroup: rec.radio.scanner
Date: 1998-02-12 00:00:00 UTC
From: Tork <tork@cts.com>
Message-ID: <01bd374e$e394d2c0$50a0d8cc@davetork>
Source record: 170609

With some of the questions on NOAA's weather radio broadcasts around 162,mhz I was wondering how did NOAA pick this part of the radio spectrum to broadcast on? I was thinking the best place to broadcast weather info, so the most people can hear it, would be on the end of the AM (MW) bands, say 530, 540 or 1710, 1700 AM or on the ends of the FM band like the traverlers info stations. More people could listen and get important weather info. Just wondering if anyone know why they picked 162mhz over the AM/FM band. I think more people could have used the info. Do any other countries do this? I know the US it's rebroadcast on AM or FM in certain areas.

Happy scanning

4877. Can anybody tell me....

Newsgroup: rec.radio.scanner
Date: 1998-02-12 00:00:00 UTC
From: Dennis Wenger <Dwenger@worldnet.att.net>
Message-ID: <6btj7t$bgt@bgtnsc03.worldnet.att.net>
Source record: 170610

I'm getting rid of my cable system, trying to cut back on some long term bills, and just don't have much time for anything other than conventional TV anymore. I live 20 miles from one broadcast TV market, and about 80 from another market, not directly to my north, with no mutual tv channels. I want to receive both sets of stations without having to get a rotor, and tune them in to two seperate tv/vcr sets through one coaxial system that was set up for my cable.
Can anybody tell me what would happen if I put a second TV antenna, in line, but pointed in another direction, to receive those stations that are not directly north ?
I know that sometimes you can receive stronger signals from the "backside" of the beam, thats why I can't point the antenna towards the weaker signal and expect to receive the strong one from the rear, because they are not directly opposite from one another. What I don't know is if this will set up some type of harmonic imbalance or type mismatch, etc.
The second antenna was given to me, and my cable system has been so dependable, that I've already gotten a primary one. I just don't want to waste my time trying to make something work that won't.
All serious answers appreciated.

4880. Re: 75 or 52 ohm???

Newsgroup: rec.radio.scanner
Date: 1998-02-12 00:00:00 UTC
From: Frog207Lillypads@Juno.com
Message-ID: <6btlvsqiv1@news.ncal.verio.com>
Source record: 170613

If it wasn't made clear in other messages on this subject...

RG 59 (the common cheap 75ohm coax) would be better than RG 58 (the cheap 50 ohm coax.) Reason is: the characteristic losses in RG 59 are less than the losses in RG 58. This difference is far more noticeable than any minor mismatch caused by using a 75 ohm cable on a supposed 50 input impedance receiver jack. ((Inexpensive monitor antennas and scanner receivers aren't necessarily 50 ohms impedance anyway.))

As stated earlier by another poster, go with the lower loss cable and don't worry about the slight mismatch.

Another important factor to getting the best possible reception is get that (good) antenna up as high as possible over your station.

I have searched in vain for a list of the AR8000 commands used on it's computer interface. I have been trying them one at a time from AA to ZZ but it's not proving very successful.

All I've seen on the web are commands for the AR3000 - which is completely different

thanks in advance

I'd suggest mounting in a van, rather than a Jeep. *Much* more room available, and you won't bump your head. Consider placing curtains over the windows, though, so some conservative passerby doesn't call the police!

I'm RCL1(Rick)
Too all the losers that pick on John.
You are Stupid , Stupid dumbasses!!!
Read on you asswipes.
I can see that John knows more about scanners or radio than all of you Bill
Cheek ass suckers.
READON
How come you always start shit?
I ain't done nothing and yet you comin'
over here like you own the motherfucker.
You ain't nothing but a two bit punk ass
two timing cock sucking pimp motherfucker
-- motherfucker.
If you were half a man, and I do mean half
a man, then you'd be half filled with shit.
"cause that's all you is now -- just a bigh
ass pimp shit motherfucker who thinks
he's bad when he ain't.

And if you keep that shit up boy, I'm gonna
have to get busy -- don't think I won't.
Motherfucker, I'll beat you two times -- hell
I'll beat you four fuckin' times, just in case
you wanna start this shit tomorrow, I will
have already whipped your as twice.

So, if you know what's good for your ass, then
you had best be backing off -- like right now
or I'm just can have to go start raving fuckin'
mad on you -- I'll kick your ass and you can
tell that to your punk ass possee motherfucker.

'Cause, I'll kick their assess too.
Correction: I'll kick their ass -- as in collectively --
motherfucker. I'll just line you all up and kick all
you'all motherfuckers.
And you better fuckin' believe that.

Don't walk away from me yet punk!
Did I say I was done talking to you. When I'm done
talking to you I'll say:

"Hey you dumb ass punk bitch motherfucker, I'm done
talking to you"

Did you hear me say:

"Hey you dumb ass punk bitch motherfucker, I'm done
talking to you"

Did those words escape my mouth without me being aware of them?
I think not, you little two timing buster. So sit your dumb ass
down and listen. Cause I have something very important to say:

and what i have to say is:

"I'll kick your ass anytime motherfucker"

That's right. You heard me. I said "I'll kick your ass ANYTIME
motherfucker"

You don't believe me? Motherfucker punk bitch are you calling me
a liar? I'll wipe this fucking street with your dumb little
ass right now, motherfucker.

I said anytime motherfucker -- that could be now. that could be
tomorrow, that could be during a fuckin' dentist appointment
motherfucker. I don't even care if they gas my ass -- I could be
the most incoherent motherfucker you've ever seen and I'll still
kick your ass -- Novocain mouth or not, you little shit.

You remember that shit. 'Cause motherfucker, there are three
things you should be afraid of in this world. That's me, me,
and me when you gone and done some dumb ass thing that really
pissed me off.

Like right now, I'm just chillin, motherfucker. I'm talkin to you
like you just regular folks, understand that motherfucker? But
if you keep coming on up in here in this motherfuckin place of mine,
I think I'm just gonna have to get nasty on your ass -- I'll kick
your ass.

Do you understand that?

Does anyone know where you can get the GRE Super Converter, or similar down-converters for hand-held scanners??? A website, snailmail address whatever for a mail order shop in Canada, USA, or UK would work. These are legal up here in Canada. Not really needed for cell, the local police have moved up to 800 Mhz trunked.

I just bought a Pro-2041 and no longer need my Pro-60.

Freq. range is 30-512, 760-824, 849-869,894-9999.9875 MHz and it has 200 Channels.

Includes original box, manual & rubber duck antenna. It is in like-new condition.

I'll pay shipping to anywhere in the continental US. Elsewhere buyer pays shipping.

E-mail if interested or if you have any questions.

Rich

Check out my site at www.mindspring.com/~jtsmith under my Interests
section, K3GO Radio, if you have or contemplate buying an ICOM
PCR1000 receiver like I did, do it, it is a marvelous radio.
Don't be fooled by it's size.
It is a killer radio running from the computer serial port and includes
a DTMF command module for the radio to computer link. I have mine
plugged into the sound blaster card and listen to SW broadcasts,
police and more through the computers speakers.... loads of fun.

73 and good dx
de John K3GO
jtsmith@mindspring.com

ICOM did a nice job on this product.

> engine 435 medic 401, etc. Does anyone in the Fairfax County area of
> Virginia know why the change was made and how to figure out what unit is
> being dispatched?

Hi Charlie,
The change is an indication of bigger changes to come. All Fairfax County Fire & Rescue front line unit numbers had a "4" prepended to their numbers (36 -> 436, 15 -> 415, etc). Arlington is now 100-series, and Alexandria is now 200-series. The 8xx units you might hear are volunteer units, and some will be 89x numbered on the fly. Can't tell where the 89x units are stationed or quartered just by their unit number any more.

This is part of a regional alignment of unit IDs in preparation for easier integration of trunked radio systems in a little while. Enjoy simple scanning while you can, for soon we will need TrunkTrackers!

I have the same problem on my BC150 sportcat. Mine does this in the 151. to 155.mhz band. I have attempted to locate a tuning device inside the unit to see if one of the coils were off a slight bit. No luck in solving the problem.When mine does this I can turn the unit off and back on and the signal goes away until the freq. is active again, then it seems to return with the dead key sound after the modulated signal is gone.When this happens it makes any signal that tries to come in on that freq. sound a little distorted. Very strange.

Funny, there is a QOUTE of you above saying that about
Flatted5th & PJB.

Your own words betray you, Bill Cheek.

> Okay....okay.....okay......so...three or four people
> are "against" me? How many are contributors to

Actually, I was only asked to give a few examples, so I only provided a
few.
There are many more!

> Suppose it were ten? So what?
> Suppose it were a hundred? So what?
> Am I supposed to care if a handful of people "don't like me"?

I dunno, would you listen & change?

Certainly. It only causes a 1.5 : 1 VSWR, for a loss of 4% or
much less than 1 dB. Use of RG-6 more than offsets the loss
from the VSWR,

>
> Any ol' pros who want to comment?

You'll get a mix of opinions on this.....but I've used
it with nary a mishap for over 30-yrs.

You don't want to get carried away with it, where
just a drop or two will do...and you don't want to
get the stuff on anything else but potentiometers
and mechanisms. Don't let it get on circuit boards
and electronic components.

WD-40 consists mostly of organic volatiles, slightly
heavier than solvents, but not by much. In fact,
WD-40 *is* a solvent, as well as a lubricant.

It is also a fire hazard....(makes a great flame thrower).

Fine, NOW you are asking me to identify "KX6".

OK, here goes! "KX6" was Kwajalein Island, a US possession up to the
1970's or so, in the area of the Marshal Islands. It was a seperate
DXCC country than the US like Hawaii, Alaska, Midway Is, etc. It is now
a seperate country itself. These are the type of basic things that any
amateur radio operator *SHOULD* know or have quick reference to.

Richard, do you know where the prefix of "V73" is from?

YEP!!! I didn't think you could!

4926. Buying Used Scanners

Newsgroup: rec.radio.scanner
Date: 1998-02-12 00:00:00 UTC
From: rusty@may-uky.campus.mci.net
Message-ID: <34e2cccf.1026039@news.campus.mci.net>
Source record: 170659

What is the best porcedure to use when buying a used scanner / radio
from someone over the net... any ideas or suggestions would be
appreciated... just trying to keep grom getting ripped off.

Thanks

rusty@may-uky.campus.mci.net

4927. AR8000 How can you stop the audio stutter?

Newsgroup: rec.radio.scanner
Date: 1998-02-12 00:00:00 UTC
From: Geno Kearney <geno.kearney@MCI2000.com>

Source record: 170660
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I love this unit, except for the audio stutter that often requires me to open the squelch up completely after it locks on to the signal. Then, of course when the transmission ends, I get an ear full of white noise. Any help or advice is appreciated.

Every frequency has an 'ideal' antenna length. The lower the
frequency, the longer the antenna needs to be (for ideal reception).
It's called wavelength theory.

John

I just bought a pro-26 two days ago and plan to return it today. The audio sucks! What difference does it make with all of the frequency coverage on the Pro-26 if it can't be heard clearly. I plan to buy a Relm 200 HS.

Glenn,

That seems to be what I've found out for myself. I chose to use the newest RS discone antenna and a 75 ' length of RG59 coax cable. This sure improved on the standard extendable antenna that came with my scanner.

joe,

High crime, huh?

What with Mayor Lee Brown now, what with his being the ex-police chief, I'd think Houston wouldn't resemble that moniker. <G>

Anyway, I think I live in the flight path for the approach to the 1400 Lubbock landing pad on top of the Municipal Courts Administration building.

Furthermore, I suppose the Heights area might be claimed to be "high crime" but I have a feeling there are other areas in Houston that would better fit that description.

Seabrook? I'll have to carry my hand held scanner down that way the next time I make a visit to the seafood eateries there at the bridge. <G>

I have a Alinco DJ-180T 2 meter hand held
Rubber duck
Drop in (regular) charger
RX and TX 130 to 174
On a scale from 1 to 10, its a 9.5 on condition and looks

I also have a Pro-63 event scanner
100 programable channels
Does not have 800 mhz
Perfect condition!
With box and manual.

I want either a used full coverage 800 mhz scanner
LIKE:
Pro-43
Pro-2006
Pro-2004
Pro-2035 or the newer version
AOR-1500
Icom-R1
It must not be blocked.

Or
The new desktop SWL receiver that Radio Shack has.

If interested please email me at xang@mindspring.com
TAKE THE "**" OUT OF THE ADDRESS TO REPLY TO ME
BTW, My name is Dan and I am on my mother in laws computer and it might
be Monday or Tuesday before I can reply.

I use WD-40 all the time on swiches (rotary, AC power, relays,
you name it), noisy potentiometers, sticky slugs in old UHF
rig inductors, locks, and anything else that slides or turns.
Doesn't hurt any of 'em. It's one of the Great Inventions of
the 20th Century (along with latex paint and plastic drinking
straws. .)

Uhuru: Captain, I'm receiving a primitive radio wave transmission
from the planet below, audio only.

Kirk: A transmission? From Planet Mackey? I thought the species
occupying the planet had only evolved somewhere between a
cockroach and a monosyllabic anthropoid. Spock, I need
answers, dammit!

Spock: Searching Captain. Two standard years ago, the planet was
visited by a rec.radio.scanner research vessel. The ships
logs show one of the planetary inhabitants had evolved
into an almost subhuman species through a freak accident
involving consumption of extremely high quantities of
prozac and a blue water derived from a fecal disinfectant
known as vanish. The prototype life form showed exaggerated
tendencies to prevaricate and create fictitious personas
using an ancient Earth computer network technique known as
"faking email addresses." The logs go on to describe many
incidents of irrational aggressiveness towards others in
pitiful attempts at gathering attention. The ships linguist
has translated the language. I'm programming the computer
with the information. The universal translator now speaks
and understands the language known as Toilet Boy, Captain.
The translator will allow us to hear each sentence as it is
translated.

Kirk: Acknowledged Mr. Spock. Uhuru, put the transmission on
audio.

Uhuru: Yes, Captain. On audio.

Toilet Boy: I'm 6'1" & under 200 lbs, so I am *HARDLY* "overweight".

Translator: I'm 5'6" & am trying to keep my weight under 250 pounds.
Hopefully, my lover Richard Simmonds will be able to
help me loose the weight by pumping me silly.

Toilet Boy: I see public people every day!

Translator: I watch a lot of television in between selling woman's
shoes.

Toilet Boy: NO, all the equipment is new out of the box, others do
the maintainence.

Translator: Of course, the shoes are new. After I try them all on, others clean them up before I sell them.

Toilet Boy: No, it is a LARGE corporation you have DEFINATELY heard of. They advertise frequently!!!!

Translator: I work at K-Mart.

Toilet Boy: Hardly, I just got a 5% raise 2 weeks ago!!!

Translator: The new shoe lifts work great. Now I'm tall enough to kiss my dear Richard Simmonds full on the lips.

Toilet Boy: Nope, I see different customers all day long for my employing company!

Translator: We have no repeat business and dismal sales because the female customers keep getting mad when I want to smell their feet and want to try on their shoes..

Toilet Boy: You were WRONG on every single one!

Translator: I'm confused. How do you work the shoe size thingy?

Kirk: Spock, your analysis.

Spock: Fascinating, Captain! Quite possibly the first totally clue less life form consumed by abject misery and completely lacking any form of self esteem we've encountered. A completely useless life form.

Kirk: Recommendations?

McCoy: Damn it, Jim, I'm just a country doctor. I don't know a thing about parasite life forms. Rub some preparation h on it and call me in the morning.

Spock: It would make an interesting case study. A life form with no females of the species, rampant homosexuality, massive delusions of adequacy, excessive prevarication, and a propensity to attack anyone who comes within a few feet. I predict a 99.875% chance of extinction of the species within the next 1.3 standard years, Captain. We can satisfy the prime directive by leaving this life form to survive or perish on its own.

Kirk: Very good Spock. Chekov, lay in a course for Talos 4, warp factor two. Engage.

Chekov: Aye, Captain. Course laid in, warp two. Engaging.

4966. Target / K-Mart freqs

Yes, only on those low freqs that the cb's operate on (I think cb's operate in the mid 20mhz). It will pick up other freqs, but not as well as a scanner antenna. You might want to look at a discone or scantenna for your scanner.
Good luck

I can't give you all the information that others might be able to but, I can offer this:

Don't pay up front on the promise that they will ship it when they receive your money. Instead have them ship it via UPS who will ship C.O.D. for an additional $4.50. Have a postal money order ready for UPS. You can arrange a "stop payment" with a postal order and unlike a personal check, UPS will accept as C.O.D. When you get your package, open it up and give it a quick inspection. You can do this as it doesn't take long to give a quick visual inspection while the delivery person is still there. If something is amiss, don't accept it and don't pay.

I recently bought a some test equipment this way and the guy said to send money first then he would ship. But I asked him to send it like I described above and he did. He was an honest guy.

glad to offer small tidbit of help...

advice?

For a good reference, see:

"The Hidden Signals on Satellite TV"

by Thomas P Harrington

Pub by Universal Electronics, 4555 Groves Road, Suite 13
Columbus, Ohio 43232

From the front cover:
Stereo subcarriers, Telephone channels, world news services, audio subcarriers,
teletype news-press, commodity news, radio, stock market reports teletext(vbi),
Single channel per carrier, multiplex data channels , plus many more "hidden"
channels.

But to answer your question, you'll probably want to connect your SW reciever
to the composite output of your Satellite receiver, NOT the antenna. If
nothing else you would probably fry your scanner, without a DC block (avail
from RS) in the line.

H Higgins

I see atleast 7 to 1 against the all knowing God of Scanning.
I am not John Mackey and I bet he would not use or advise the use of WD-40 in
the application you mention Billy Boy.
30 years an all pro in his own mind.
Question anyone , How old is WD-40 anyway?
I don't really know.
Maybe the Cheek man is blowing!!!!ya ya your favorite!!! smoke again about all
his experience.
Very busy writing not very busy applying.

You'll get a mix of opinions on this.....but I've used
it with nary a mishap for over 30-yrs.

You don't want to get carried away with it, where
just a drop or two will do...and you don't want to
get the stuff on anything else but potentiometers
and mechanisms. Don't let it get on circuit boards
and electronic components.

WD-40 consists mostly of organic volatiles, slightly
heavier than solvents, but not by much. In fact,
WD-40 *is* a solvent, as well as a lubricant.

It is also a fire hazard....(makes a great flame thrower).

Don't do it. WD-40 can go rancid, especially when it heats up, and the
last place you want it when that happens is trapped inside your pots.

Use something made for contacts like Caig DeOxit or Preservit.

No. WD-40 is not electronic grade as far as conductivity goes.

Please don't use WD40 for pots, switches, connectors, or anything you
want to stay clean and lubricated. WD40 is a petroleum based oil which
will hold on to dirt and cause a nice grime build-up. It is also not
conductive, and has been known to promote corrosion. If you must use
something, try De-Oxit from Caig Labs. I have used similar products and
have good results. This chemical will enhance contact conductivity, and
forms a protective film.

Several points. Most dishes are optimized for C and/or Ku band. Most
home dishes are not large enough, and the feed is too small for use at
the frequencies you are talking about.

Most have an LNB at the feed, which down converts C or Ku bo
900-1450Mhz, the LNB also has 50-60 db gain, so it is quite likely to
overload your receiver.

If you want to use your AR8000 to listen to C band of Ku band via the
LNB, fine, but if you expect to connect it up to hear 10000-1900Mhz,
forget it.

Many of you will have files to share. I suggest the following:

Send a message to the list. Tell the list about your file and ask anyone
who wants a copy to email you privately. Then you can email only that
person the file, instead of the entire list. Alternatively you can place
your file on a web page and post the URL to the list.

I Believe you've gotten some wrong information here Mike - Please tell
us how to stop payment on a money order purchased from the post office -
according to the local post office here, you can't - it's not like a
personal check...

> When you get your package, open it up and give
> it a quick inspection. You can do this as it doesn't take long to give a

> something is amiss, don't accept it and don't pay.

Again, nope... I've used UPS for years, both pick up and delivery, and
my local drivers have NEVER waited for me to inspect a package before I
paid for it. A few months ago I called the UPS depot and asked if I
could have the driver wait while I checked a delivery, and was told,
"no". Driver delivers, you pay, he leaves package - what you do after
that is up to you...but the driver won't stand there and twiddle his
thumbs while you check out the contents of a box.

> I recently bought a some test equipment this way and the guy said to send
> money first then he would ship. But I asked him to send it like I
> described above and he did. He was an honest guy.
>

So if he didn't want to send a package COD (and wait two weeks for his
money!) - he wouldn't be "an honest guy"? Great reasoning...

How about all the flakes out here who say "ship COD, and we have a
deal"...only to change their minds when UPS shows up, and refuse the
shipment? The shipper (who acted in good faith) is out the UPS
charges...happens all the time, but not to me. I don't ship COD.

If you want an item pay for it. Just like you do in the real world.
You don't pay for it, you don't get it.
Check out the seller as best you can, and then either go for it, or
don't buy it...but don't expect everyone to meet your mis-informed

standards, or you won't be buying much over the net.

> glad to offer small tidbit of help...

Very small, and totaly mis-informed - but at least you tried.

> Mike mstanton@centuryinter.net
>
> jack <rusty@may-uky.campus.mci.net> wrote in article

> > appreciated... just trying to keep grom getting ripped off.
> >
> > Thanks
> >
> > rusty@may-uky.campus.mci.net
> >

1. Check out the person as best you can before you send any money...get his REAL name, address, AND phone number.

2. If a lot of money is involved, give him a quick call and get an impression of him...use your instinct - does he sound "ok", or like a "flake"? Verify his informtion (address, etc.,) while you have him on the phone.

3. Do a Deja News search of his E-mail address. While this is not foolproof (people can change their ISP's very easily), it may help you somewhat...

4. NEVER do business with anyone who uses a false front mailing address such as hotmail, usa, pyramid, etc...unless they also give you their REAL address too.

5. If you're not "quite sure" of the deal, offer to send the guy a personal check and agree to wait a week or so for it to clear (instead of sending a virtually impossible to trace money order). Cancelled checks are better proof than a carbon copy money order receipt. Plus when you get the check back from your bank - it will have all of HIS bank information on the back...that information might come in handy. Not everything we do has to be "instant"...learn some patience, it can help protect you.

6. Don't rely on COD to protect you either. There have been several stories of people receiving a book, a brick, or other items in a COD box - rather than the expected equipment. UPS does NOT have to wait while you inspect a shipment...

7. Facing reality - If the guy is a crook, and out to rip someone off over the net - he's probably going to do it, and get away with it. If you do get ripped off, with the information you've been able to compile,

and your canceled check, you may be able to go to his local city attorney, state attorney, and (perhaps) police/sheriff to stir up his world a bit. However, it's doubtfull anything will ever be done about it - don't hold your breath. Most people never get their money back.

In summary - Be careful, and 90% of the deals will work out fine for both parties. If you do run across a bona fide ripoff artist, or someone misrepresenting their junk as "like new" equipment...POST POST POST everything you know about the jerk to the appropriate news groups and try to warn others!

FWIW

BTW, FWIW, I've NEVER been ripped off buying gear though the "net".
I've not used COD-and UPS is a hassle for me, so I've told people to use
US Mail.
I do agree that there are a few crooks out there, which is why I won't buy
a COSTLY item from a private seller, unless the seller is local enough so
that I can see the item BEFORE buying it.

I've sold a number of scanners (other stuff too) over the Internet to people who first sent me the money and then relied on my integrity 1) that the scanner's condition was exactly as I claimed and 2) that I would actually send them the scanner. No one has ever complained.

One on occasion, I sent my scanner to complete stranger (not a company) to do a modification for me.

It surprises me that people are willing to trust complete strangers but it happens all of the time without dire consequences.

In the one instance that I did it, I believed the person was honest because he is a regular newsgroup poster and he was eager and willing to provide any and all information that I might have wanted to affirm that he was trustworthy. Not a guarantee by any means, but it worked for me.

None of the other ways, short of being able to use credit cards for transactions between two people, is fool proof. What it all comes down to is whether or not you believe people are inherently trustworthy. I believe that most people are. I don't have an evidence to back this up, but I am willing to bet that straight-out ripoffs do not occur all that often.

Hmm, I better go dust off one of those old college books to find out whether that was Hobbes or Locke who argued that "men are nasty, brutish and short..."

With programmable logic you can hack anything. All you need is the time and the reason to do it. Until the entire thing is in a single chip and you can't get at the pins it will be possible to hack. After that you'll have to send the chip to Taiwan and get it decoded. Then program up a new one. The cost will be about $10K depending on the technology required. Politics and technology just don't mix. Congress shouuld worry more about the content of their communications than who might be listening. In fact, I think we should have a law making all non-national defense related conversations proactively public if they occur by any elected official. We'd probably have fewer scandals and a better government!

/Len

> any advice?
First you must have a power supply that can put out 12 to 20 volts DC.
This voltage is used to 'tune' the LNB or LNA. Then you must block this
voltage from the scanner ant terminal. You must know the OUTPUT freq
of the LNA/LNB. (usually 740 to 1470 MHZ). Knowing the voltage tune
range of the LNA/LBN is critical. Too much voltage you smoke it. (but
they are cheap $39.00 to $100.00)
Set the power supply at the voltage to freq spec. of the transponder.
Search the out put freqs. You will be very disapointed at this point.
Don't give up. Spend endless hours doing this. Your life will slip away.
I've done this. I used an old satellite receiver to tune the LNA/LNB and
picked off the IF sig. with a homemade DC blocked splitter.
The results were less than I expected. But don't be stopped in your
quest by my bad results. Keep tring, keep experimenting.

5003. Wanted - Sony WA-8800 and Phillips AE-3905 SW radios

Newsgroup: rec.radio.scanner
Date: 1998-02-13 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <6c1uqd$mec@bgtnsc02.worldnet.att.net>
Source record: 170518
Cross-posted to: alt.radio.scanner.uk,alt.radio.uk,uk.radio.amateur,rec.radio.shortwave,rec.radio.scanner,rec.radio.swap

I would like to but these two radios:

The Sony WA-8800 (A) is a am/fm/sw cassette radio in the early 80s vintage.

The Phillips AE-3905 is a mid-80s vintage very compact shortwave radio which folds up to the size of a pack of cigarettes.

If you have one, or know of a friend who may have one for sale, please drop me an e-mail. I have a friend in the UK who can pick up the radio from you! Thanks!

I am not going to make a 300 page dissertation on this, but I CAN tell you what is going on. When you get your hand close enough to the scanner your BODY is effectively coupling up with antenna! This is changing the resonance frequency of the antenna. It sounds like in your case it is (can't think of the word!, so we'll use this one) decreasing the signal getting into your radio because your body is changing the electrical length.

In my experience this usually happens to do poor shielding internal to the radio. It will happen at different frequencies for different people due to different water content of the body, height, weight, and position relative to other metal object.

Hope this helps you to understand the problem! (This happens with TV too)

get the book, "the hidden signals on satellite tv," by thomas harrington (grove used to sell it; still may). the author describes in 230-plus pages how to hook up you scanner to a sat dish and what sorts of things you can expect to hear (telephones, teletext, news and other audio programming, and several other things).

i'm not saying that it works, since i haven't tried any of the stuff in the book. but there's at least one guy around who apparently knows a lot more about this subject than you do.

Ummm, probably the best thing to do would be to point your browser at this address. http://support.tandy.com They keep all that stuff online, and you can print it out for no cost. OWNERS manuals, now if you were REALLY asking for a SERVICE manual then you will have to look elsewhere. Like going INTO your local RadioShack and having them order one for you.

Regards,

Cliff

Source record: 170338

Duane:

All the major radio equipment manufactures have discounts, or coupons on various rigs from time, to time. Icom is also offering a $300.00 coupon on the IC-R8500. Yaesu has a $200.00 coupon on their FT-920 HF Transceiver. This is very common, and does not necessarly mean it's being closed out, or discountinued.

The R10 is a nice hand-held wide-band communications receiver. It has a slow scan speed, but it's other features are really nice!

Bill Crocker

5042. AOR 8000

Newsgroup: rec.radio.scanner
Date: 1998-02-14 00:00:00 UTC
From: dbc <gbout@mail.jax.bellsouth.net>
Message-ID: <34E596F9.1BF9@mail.jax.bellsouth.net>
Source record: 170409
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I just recently purchased this model scanner (AOR 8000) and I find that it is very conplicated but at the same time it is very sophisticated in its abilities.

I know the local sherriff's dept in on 435.450 for the particulars area I wish to listen to but this dam scanner only picks up very weak garbled communications if it gets anything at all. I know on a Friday night this freq is lit up w/ activity but you can't tell that from the scanner.

How can I get this scanner to rec transmissions I know are there and where they are. I have adjusted the step change rate but I still cannot get crap.

I know I am close enough to rec the communications b/c my other scanner get the radio comm very well... I have them both right next to each other one (the radio shack model) get the communications and the AOR 8000 does not when both tuned to the same dam freq.

what can be done to help this AOR work properly?

plz help me out if you can...

gbout@bellsouth.net

Perhaps, I worded my posted message incorrectly. The unit is in excellent condition. I still possess the original manufactures box, manual, accessories(excluding options). The unit has been rarely used. The sale would be final. I would be willing to include a wideband omnidirectional discone antenna for no lower than $850, shipping included.

5046. Bearcat 220xlt and undocumented key codes

Newsgroup: rec.radio.scanner
Date: 1998-02-14 00:00:00 UTC
From: "K. Mac Donald" <kmd@fox.nstn.ca>
Message-ID: <01bd38f3$d2352ab0$677f35c6@home>
Source record: 170413

Is anyone awarre of any undocumented key codes for Bearcat scanners.
I have a BC220 and would be interested in knowing some of the codes.
If possible would you direct me to a source of information on this topic
or on modifications for the BC220.

Also, when searching in the 900 Mhz range, the scanner will lock on
to conversation but then abruptly disconnect and restart the searching.
This will occur even if hold is on. I think the transmitter is actually
doing
this but I am not sure. I use the original antenna, would another antenna
type help?

Any ideas?

Thanks,

K. Mac Donald

#1 Is the receive mode set to FM?
#2 Most public safety in UHF uses 12.5kHz steps
#3 Are you sure this is the right frequency? It falls
within what the FCC has allocated for an amateur
radio band...particularly for their satellites.

Strong signals,

The PRO-51 is bascially a Uniden BC220/230XLT. My Scanner
Model FAQ(http://www.qsl.net/n2mca/MODEL.HTM) contains a
list of some of the Radio Shack models made by Uniden and
GRE.

Bill Cheek was also collecting such a list which listed
the Radio Shack model number along with its Uniden
equivalent. You might want to visit DejaNews to try and
dig it up.

Good luck!

I've seen a few people talking about MDTW1234, and a few
people asking where it can be downloaded from. Doesn't seem like
anyone remembers where they downloaded it. If someone remembers
please post the location. Thanks

I was just thinking the same thing. I found it at
http://www.geocities.com/SiliconValley/Lab/1067/.

I do not understand why anybody would play with you either. Maybe if
you tie a pork chop around your neck, your dog will play with you.
Hehehehe!

5059. Bearcat SC150 Sportcat.

Message-ID: <01bd3909$62c66520$73b698ce@Pscanist>
Source record: 170427

Fellow Hobbiests,
I just bought a perfect AOR AR8000 dirt cheap. I am trying to find
out how to tell the diffrence between an AR8000 (cell modifiable with
upload)
and an AR8000B version(not modifable with upload)
I tried to get an answer from AOR dealers and the AOR company in Japan,
but no luck.
Any information is greatly appreciated.
Thanks in advance,
Eddie Kosloski

5065. Updated Edacs Source Code

Newsgroup: rec.radio.scanner
Date: 1998-02-14 00:00:00 UTC
From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <01bd20bb$6445a160$b74722cf@default>
Source record: 170432

Hi,

To all the people who have emailed looking for the updated source code for the Edacs program. I would be more than happy to supply it to anyone who sends an email request to the address below.

NOTE: I am looking for someone to offer to put the code on their site so that I don't have to email everyone that wants it and they can download it themselves. I will however try to answer email requests
for assistance. All I ask is that people don't send me hate mail as you must remember ITS FREE and many hours have been spent by numerous people getting the program to where it is.

For an ambitious soul:

It is desired to add the ability to fill the 2 arrays indicated in the source on the fly upon entering the program. (From a file is best) so that the program may be used by people without compilers.

The program can be used by Pro 2006/Optoscan 456 users (and most Icom radios with a small change to the source code.)

Remember: Have fun !

Thanks to Cameron Foster and others who have provided assistance to this project.

Kevin Fisher
klfisher@compusmart.ab.ca

5069. 2022 info request. (Bill Cheek)

Newsgroup: rec.radio.scanner
Date: 1998-02-14 00:00:00 UTC
From: Bill Eitner <kd6tas@earthlink.net>
Message-ID: <34E55310.BD9@earthlink.net>
Source record: 170436
Cross-posted to: rec.radio.scanner,alt.scanner

Thanks to all who read this.

I recently built the frequency standard outlined in Cheek 3.
It works flawlessly.

Now, my brother has a Pro 2022 and wants to do the mod where
you pipe a sample of the master oscillator signal to a BNC
connected to the back of the scanner. Doing so with a 2000
series scanner was also outlined in Cheek 3--that's where
the idea came from.

The questions are obvious: Can it be done? What's the frequency?
Where's the resonator? Is CX-1 it's part number? Will it stay as
close as the standard I built based on the resonator that goes in
a 2004/5/6 series scanner? Is a service manual for the 2022 still
available? If not, can someone sell me a copy?

Thanks in advance to anyone who helps me with this.

Friend, you're only the 7,363rd (more or less) person to make a
similar observation in UseNet in just the last month or so. If you
were not an obvious newbie, you'd know why such comments are
counter-productive.

Take responsibility for your own life. You are using Agent, which has
an excellent killfile. Learn to use it. Problem solved.

Unless, of course, you really want to stir up a bit of flammage
yourself. In which case, please continue to belabor the obvious.

ANY antenna will work on a scanner!!!! How efficiently is another question.
Best rule of thumb - the more metal you have, and the higher it is, the
better you hear. It's called capture effect. More important is the coax
from the antenna to the radio. Settle for nothing less than 9913. Anything
else and you lose the signals the antenna captures. Good luck!

As I don't have a 2022, I can't give you a answer-but calling
1-800-the-shack and ordering the service manual will answer your question,
and probably any other question you have about the 2022 in the future.

I use it on CTS.

If you are building the PD20x interface inside a gender-changer-style case, you may wish to mod it slightly. Make sure the case has a female 25-pin connector and a male 25-pin connector. Strap D1 to DTR instead of TxD (along with D4). Also, there are a number of serial lines that should get passed straight through; have a look at the FAQ. This is to facilitate a future revision of MDTW1234.

The url for MDTW1234 is http://spectrum.base.org/
which currently redirects you to the GeoCities address mentioned in someone's earlier post. The redirect address is used in the event I want/have to move the site from GeoCities.

5080. New ICOM PCR-1000 Rev 1.3 software FREE

Newsgroup: rec.radio.scanner
Date: 1998-02-14 00:00:00 UTC
From: Steve@swssec.com
Message-ID: <34e5aaf2.10714651@news-s01.ny.us.ibm.net>
Source record: 170447

Hello list,

ICOM has released the latest version (Rev 1.3) software for the
PCR-1000 receiver.

It is available for free download at:

http://www.icomamerica.com/receivers/pcr1000download.html

Only minor differences from Rev 1.2, but worth the effort to download
and install if you own the PCR-1000.

Non-owners also can download and play with the software to see how the
receiver would work if you had one. Free also. The software is a full
operational, non crippled version.

We currently sell the PCR-1000 for $489 + UPS (discounted cash price)
and our exclusive 2 YEAR warranty. Similar low prices on other ICOM
receivers. Only about a month left for these prices; they go back up
towards the end of March.

We will consider trade ins of other ICOM equipment. Buy and sell used
ICOM receivers and commercial. Repair also.

VISA/MC/Discover/AMEX accepted.

Email if we can help w/ anything ICOM.

Regards ..... Steve

And is legal to be reading
>MDT messages?

.....

The MDC4800 protocol (MDT) is not encrypted, but merely uses standard encoding techniques to make it MORE readable, not less. It is ordinary ASCII text.

The revised ECPA mentions encrypted, not encoded and therefore under this law atleast, it isn't illegal. Now repeating what you find or using it to commit a crime is still a crime in and of itself.

If you used brand new parts from RS it would cost about $12. $6 of that would be for the cable. If you had everything but the op-amp, you could get it done for $0.60 or so.

As far as source code, exe files, and links to other things see:

ftp://ftp.netcom.com/pub/so/source/index.html

Happy scanning,
H Higgins

Whoops, I told you guys wrong. It was not a Postal money order, it was a money order through our local bank. And yes according the bank, we can stop payment on it as if it were a check. Haven't ever attempted it yet, but they said that it would be $10 service charge to do so.

I found a place to order and recieve the outlawed AOR 8000 for a dam good price, 399.00 dollars shipping included. Great radio at a great price. One thing though, this radio is not for the novice scanner fanatic... It is VERY very complex but kicks butt.

email me for details if you are interested...

Please point your browsers to the following _excellent_ review by
Rich Wells. "Radio Shack PRO-2035/OS535/PROBE Review". I don't think
that the reviews come very much more detailed (yet easy to understand) than this great
report.

http://www.qsl.net/n2mca/REV2035.HTM

Quote:
"PROBE is able to run with the most minimum of systems and that's bound to please a lot of
people. Should you simply have an older machine or maybe you have your last PC lying
around doing nothing since being replaced by your new multimedia, voice-activated,
coffee-making,dog- walking, do everything computer.

In either case, PROBE can do the job. It only needs DOS 3.3, 640K ,a
serial port and hard drive. What could be simpler? No extended memory, no expanded
memory(although it will make use of EMS/XMS if available) , no CD-ROM driver and
multimedia extensions installed. You get the point.

The only thing to really consider is that the older the machine, the slower it will run.
The slower it runs, the slower your scanning and searching will be. It may also be the
case that older PCs may have older UARTs which can not handle the higher data rates for
the serial port that we are all accustomed to seeing these days. This too will slow your
performance."
End Quote

I am pleased to see that Rich Wells also noted that optimizing the software ("make use of
EMS/XMS if available") AND optimizing the hard- ware ("older UARTs which can not handle
the higher data rates for the serial port") can have significant effects on the scanning
speeds of this setup.

Only since around 1995 did we have "Fast Uarts" or "16550 UARTs" that handles the serial
port data rates needed today. (for handling the
data rates of a common 33.600bps+ modem , for instance.)

All the "older" machines we are talking about here (including allmost every [if not
every] ,porable,laptop- and notebook) have old serial
port interfaces.

Quote:
"The only thing to really consider is that the older the machine, the slower it will run.
The slower it runs, the slower your scanning and searching will be"
End Quote

I want to ask the users of the Probe/2006+/456+ setup out there if they agree that this is
an issue to consider when otimizing the scanning speeds.

Are there for instance ways to upgrade the serial interfaces of older portables ? (I doubt it, think that goes for all portables).

I think the only way to get an optimized scanning-speed is to use a 16550 UART ,these are only found in post-1995 PC's or ones that has
been upgraded with a 16550 UART I/O card.

Regards,
Knut Otterbeck

I have a 2035 with os/535 and I am running it on an IBM PS 77 486/33
I have it set at 19,200 with the switch in the radio set at the same and
I am averaging about 42-47 cps. When I run it on my Packard Bell(arghh)
pentium 75 mhz I average around 100-110 cps. There is quite a
difference.

5106. Why Icom dropped price on R-10 Scanning receiver ?

Newsgroup: rec.radio.scanner
Date: 1998-02-14 00:00:00 UTC
From: Duane Park <dspark@ix.netcom.com>
Message-ID: <6c538t$mrk@sjx-ixn2.ix.netcom.com>

Does anyone know why Icom decided to drop their
price on the R-10? Was it priced too high? or is their
a new model coming out soon.... I'm considering buying
one at the reduced price, or is that a mistake.....
Any comments would be appreciated....

Your other scanner is receiving an image signal, possibly of 456.85 MHz.
Your local sheriff is not operating on 435.45 MHz, as that falls in a band
allocated to amateurs and long-range military radars. The defect is not in
your new AOR 8000 but in the older scanner.

Message-ID: <6c599c$gbl@hopper.acm.ORG>
Source record: 170483

barryo@XfastlinkX.com.au (Barry O'Grady) asked:
> Would someone please list the VHF TV frequencies for the USA?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Television [73.603]

Ch Range Video Audio

2 54 - 60 55.250 59.750
3 60 - 66 61.250 65.750
4 66 - 72 67.250 71.750
5 76 - 82 77.250 81.750
6 82 - 88 83.250 87.750
7 174 - 180 175.250 179.750
8 180 - 186 181.250 185.750
9 186 - 192 187.250 191.750
10 192 - 198 193.250 197.750
11 198 - 204 199.250 203.750
12 204 - 210 205.250 209.750
13 210 - 216 211.250 215.750
14 470 - 476 471.250 475.750 }
15 476 - 482 477.250 481.750 } Range for Ch. N
.. ... - ... . } Low = 386 + 6*N
68 794 - 800 795.250 799.750 } High = 392 + 6*N
69 800 - 806 801.250 805.750 }

Note the gaps between chs 4/5, 6/7, and 13/14.
Freqs in the 470-512 MHz range (Ch 14-20) may be assigned to
Public Service mobile use in major metro areas. No transmitters
are allowed on 608-614 MHz (Ch 37).
Each TV channel is 6 MHz wide. The video carrier is 1.25 MHz
above the start of the range. The audio carrier is 0.25 MHz below
the end of the range. Television audio is wideband FM.
Some TV stations may be offset +/- 10 kHz.

Source record: 170484

On 14 Feb 1998 05:45:37 GMT, chevy69ss@aol.com (Chevy69SS) was lurking in rec.radio.scanner, and composed the following about "will this work?":

> will a cb antena (antron-99) work on a scanner?????

CB antennae are optimized for reception in the 27Mhz band. It will certain perform poorly on the higher freqs. Better off to invest in a real scanner antenna, or vertically mount a UHF/VHF TV antenna, if you're really strapped for dough.

5119. FS: Uniden BC3000XLT handheld scanner

Newsgroup: rec.radio.scanner
Date: 1998-02-15 00:00:00 UTC
From: bodoh@dakota.net
Message-ID: <6c72uacfg1@server2.dakota.net>
Source record: 170287
Cross-posted to: rec.radio.swap,rec.radio.scanner

For sale: Uniden BC3000XLT handheld scanner (current Uniden top-end model);

Coverage 25 Mhz to 1.3 Ghz (minus cellular and 550-760)
400 channels in 20 banks
300 ch/sec search, 100 ch/sec scan
10 priority channels
automatic search and store
selectable (AM/FM/WFM) modes (receives TV and FM broadcast audio)
selectable attenuator
data skip (skips over data channels)
WX key
typical features such as lockout, battery saver, selectable search steps
built in nicad
triple conversion

This radio is in 'mint - like new' condition, with everything it came with new; box, manual, duck, AC adapter - even packing materials! Also included is the optional leather case. Note that for those hung up on cellular reception, it reportedly receives cellular images clearly from 1005 to 1030 Mhz. This radio is one of the best at rejecting overload and intermod. The 20 banks, search store feature, TV and FM broadcast reception and leather case make it ideal for travel.

My price is $300, paid in advance by postal money order, I pay your choice of UPS or USPS shipping. No trades. Please Email with questions...

Tom, N0YGT

: Assuming I was using another type of radio such as a modified PRO-2006,
: what differences in performance in the 800 and 900 range would there be
: above the BC220xlt.

: I am considering purchasing a modified PRO-2006 and wondering what I
: can expect to receive.

: k. Mac Donald

A 2006 won't get images in that range, but since the 2006 can be unblocked
by just cutting 1 lead on a very accessable diode, this would not be a
disavantage.
In general, the lack of images on a triple conversion unit is a good
thing.

I have complied mdtw1234.c into mdtnew.exe with a .bat file. And put
them in my pub subdirectory. I have the mdt.bat set up as /re /com:2 /ws
/wf as outlined in the mdtw1234.txt. Use any text editor to change the
.bat file. Note mdt(anything).exe will not run out of a Windows95 dos
prompt. You must reboot into dos mode. This is because of the way Win95
handles memory allocations.

If you place any value on the truth, facts, records,
and history, you'll use other methods to "free up
disk space". Newsgroup archive files don't take up
all that much space anyway. Hard disk space is cheap
these days, and.....it represents a power that begs
for full utilization.

> >I count in my "sent queue" 47 on-topic, relevant posts for the month of
> >January. These are basically inarguable. There might well be another
> >dozen or more that some people would argue. So I didn't count them.
>
> >But anyway......your point of the question was.......?

> 47 to ?? to 2. I was just curious about the topic to harangue ratio.

You didn't ask about that......and it is well within
your powers to determine it for yourself. And there
is one other thing that you *could* also determine for
yourself.....

.....that being the inalienable *fact* that I do
not under *any* circumstances at *any* time initiate
a haranguing. I treat people as they threat me....usually
a little better; never any worse. Not *ever* worse.

You need only employ the powers of your computer and
software to follow a thread in the newsgroup or to
research it via DejaNews or other search engine.

If you should take that time before coming to a conclusion,
you will see that I am here for scanners and scanning.
I am not, however, one to sit idly by or pretend to
not notice when some snotball takes it upon himself to
purge the world of me and the tracks I've left in my
back trail.

I am a peaceful man by nature. This is not to imply
that my peace carries with it a weakness. Some think
it does.

So I carry a great big stick and I am not afraid to
use it. That's both in *real* life as well as here
in *virtual* life.

If the collective consciousness of the newsgroup wants
to interact about scanners and scanning, then it will
do so. If it wants to harangue and harass those who
are capable of injecting the flow of the hobby with truth
and enlightenment, then it will do that.

Frankly, it does both. As a newbie, you must make
your choice....for the one; the other; or both. No
matter what......though.....it is *your* choice. Just
try to make an enlightened one. Use the resources at
your disposal to lay the framework for your view of
the facts....and employ less of that variable we call
"opinion". Opinions are necessary ONLY when the facts
are elusive or unobtainable.

> Thank you for the information. Still waiting for
> a reply from Mackey.

You will probably wait until hell freezes over, or he
will pop in to obfuscate your question and you won't
get a straight answer.

IMHO.....

In article <34e64911.0@news1.ibm.net>, Russell Thomson <"rjthoms"@ibm.net>
writes

Hi,

>I have a query regarding an AR 1500 scanner (remember those?!). The one
>I have been given to work on has a switch inside the battery
>compartment. Anyone know what this switch does, and what happens when it
>has been activated?
>
>This unit has had the switch activated, and now it will not operate
>correctly (ie. cannot select anything, unit locks up irregularly)
>
>Suggestions anyone?

The switch was used for resetting the CPU followed by a series of keystorkes
or eben keystrokes...once the switch was moved you had to reset the CPU.

Following will hopefully help:

============
AR1500 Microprocessor reset

The information stored in the memory channels (scan banks) and search bank is
permanently held in a `chip component' called an EEPROM (Electrically
Erasable Programmable Read Only Memory). No battery backup is required.

In the extremely unlikely event you should encounter problems with memory
loss or corruption it may be possible for you to RESET the microprocessor.
This scenario may occur due to static discharge from mobile operation,
connection to an external aerial, shipping in plastic & polystyrene materials
or from noise on the power feed to the receiver.

A small RESET slide switch is located in the battery compartment of most
(BUT NOT ALL) AR1500 receivers. This switch is covered by a protective tape
and is connect to a short length of wire. If you cannot locate the switch
and are not comfortable with `lots of button pressing' please contact your
dealer.

If a reset switch is not present, you will require further technical
information!

1. Switch the AR1500 Off and remove the battery cover and NiCad pack.
2. Remove the protective tape from the slide switch.
3. The switch has two positions, carefully slide the switch from the
first to the second position.

4. Insert the NiCad pack and switch on the receiver.
5. The display should be blank at this time.
6. Carry out the following key strokes very carefully, take your time.
If you make a mistake switch the receiver Off/On and start again.
If the first sequence of [BANK] [PROG] has no effect repeat these key presses as required. The key strokes should appear on the LCD as you progress.
7. Execute exactly as shown! (ignore the " - "separator):

AR1500 & AR1500E
BANK - 1 - PROG - 0.5 - LIMIT - 1.995 - SEARCH - 556.325 - ENTER
2 - PROG - 2 - LIMIT - 299.995 - SEARCH - 556.325 - ENTER
3 - PROG - 300 - LIMIT - 419.995 - SEARCH - 249.125 - ENTER
4 - PROG - 420 - LIMIT - 606.995 - SEARCH - 249.125 - ENTER
5 - PROG - 607 - LIMIT - 797.995 - SEARCH - 58.075 - ENTER
6 - PROG - 798 - LIMIT - 1105995 - [DOWN KEY] - 249.125 - ENTER
7 - PROG - 1106 - LIMIT - 1300 - [DOWN KEY] - 556.325 - ENTER

AR1500EX (it's slightly shorter)
BANK - 1 - PROG - 0.5 - LIMIT - 95.995 - SEARCH - 556.325 - ENTER
2 - PROG - 96 - LIMIT - 299.995 - SEARCH - 556.325 - ENTER
3 - PROG - 300 - LIMIT - 512.995 - SEARCH - 249.125 - ENTER
4 - PROG - 513 - LIMIT - 797.995 - SEARCH - 58.075 - ENTER
5 - PROG - 798 - LIMIT - 1105995 - [DOWN KEY] - 249.125 - ENTER
6 - PROG - 1106 - LIMIT - 1300 - [DOWN KEY] - 556.325 - ENTER

8. Switch Off the receiver and remove the NiCad pack.
9. Carefully slide the switch into it's original position and replace the protective tape.
10. Insert the NiCad pack once again and switch On.
11. Test the receiver fully.

Notes:
This procedure resets the microprocessor and clears the contents from the memory channels - they will now be blank! The search banks may differ from the defaults shown in this manual, in this case you will need to reprogramme them.

You have instructed the operating system of the AR1500 to receive selected bands with selected Intermediate Frequencies (IF), if your keystrokes faithfully followed the above then you will have an unbroken coverage from 500 kHz to 1300 MHz without gaps. If you receiver a <Fr.Err> message, you have probably made a mistake - try again.

Note: To ensure the best microprocessor stability never delete ALL memory channels from a scan bank, it is a good idea to leave at least one active channel in each bank... i.e. 000, 100, 200 etc. Do not limit the scan range to a memory bank which is totally empty.

=========

All the best

Try the NF2G Scannist Pages at www.ggw.org/nf2g

I'm in the process of rebuilding the site, so not every county is back online yet. All upstate (excluding NYC/LI) counties are online whose names begin with the letters A through N, plus Oswego County. In addition, you will find frequencies for Ontario and Quebec Provinces, plus legal and other pertinent information.

From: Clifford-KC7UGE <cliffg@cyberhighway.net>
Message-ID: <34E76A8A.7918771F@cyberhighway.net>
Source record: 170308

For a COMPLETE list of cordless frequencies please see my web page at
http://members.aol.com/kc7uge

As for why you are getting it on one scanner and not the other-here are
a couple of possibilities:

1) Antenna-different antennas are better at different frequencies.
2) Placement-if the scanners are in wildly different places there may
not be any cordless freqs. for one of the scanners to 'hear' where it is
sitting.
3) One scanner is perhaps naturally more sensitive at those frequencies.
You can probably look at the difference in specs. at
http://support.tandy.com
4) One scanner only gets used during the day when perhaps there are not
as many phone calls being made.

regards,

Clifford

I am looking to add another scanner to my 1994 Chevy Blazer and wondered if anyone had any tips or tricks. What is the best way to supply power? Should I use one antenna or use multiple antennas? If using two antennas, which is the best way to run the cables? Also looking for any help with a way to mount more than one scanner in a blazer.

Thanks in advance!

Andrew

5152. What's a good Newbie's Scanner?

Newsgroup: rec.radio.scanner

Body handling: Binary attachment payload not displayed: vcard.vcf

I've been looking through the posts and I've decided that I'd like to
get into scanning. What are your recomendations for a beginner (I admit
it) as far as equipment? I've been hearing a lot about Radio Shack's
PRO-26, PRO-67 and PRO-64. Price is also an issue. I am not willing to
spend more than $150 because I already have computing as my "spendy"
hobby and I can't afford two money pits :-)

Thanks in advance,

From the description given on that page the only change is a minor
cosmetic and not an improvement to the functionality.

.............................
note: please remove the
"antispam" reference in my
e-mail address when replying
.............................

I just finished reading the technical
review of the new PC-PCR1000, "black-box",
PC-based receiver.

I see an excellent application for this
unit in doing field-strength surveys
of land-mobile-radio frequencies.

The write-up did not indicate if there
is a seperate jack or output on the
receiver itself that would be an
analog, DC voltage that would represent
RSSI (Receive signal strength indicator)

Does anyone know if this receiver has
a seperate output for RSSI?? A seperate
output would be ideal for porting the
signal strength indication to another
software program.

> was two. One about antennas, another about parts for a Pro-43. And you..???

I count in my "sent queue" 47 on-topic, relevant posts for the month of
January. These are basically inarguable. There might well be another
dozen or more that some people would argue. So I didn't count them.

Now ask our gooooooood buddy Mackey how many scanner-topic posts
he made during that period. Hell, I'll give the duckplucker a 12:1
handicap and let HIM count all the scanner-topic posts he made in
all the 12 preceding months. 12 of his months; one of mine....
and I'll still dust his britches to Kingdom Come.

But anyway......your point of the question was.......?

That's more than double the speed for the P75 (in cps "channels per second" , right?) versus the old 486-33MHz. Hmmm...

You say you average around 100-110 cps ,that's very good! Is it stable and picks up all the activity it is supposed to?

Do you think you could get an even better "score" with an even faster CPU?

Would you know if it is the internal speeds of the CPU's or the external speeds that are most important to utilize for the faster scanning speeds. Or is it just the "upgraded class" of CPU (from 486- to Pentium) that does the trick?

Knut

I suspect it is competition. The R-10 was not a less expensive than
the Alinco, the AR8000 or the MVT9000, all of which very dramatically
outperformed the R10. Either a new model is in the offing, or ICOM has
decided to reposition themselves in the market.

Using my BC220xlt in and around the 900mhz range I am picking up
cell transmissions which I have been told could be 'image' signals, which
are actually being transmitted on another band, but through harmonics
reproduces on another band.

Assuming I was using another type of radio such as a modified PRO-2006,
what differences in performance in the 800 and 900 range would there be
above the BC220xlt.

I am considering purchasing a modified PRO-2006 and wondering what I
can expect to receive.

They dropped it because they are approaching the end of their fiscal
year (March 31st) and want to get rid of as many as they can by that
date, to jack up annual sales figures.

Count on all specials being discontinued and all discounts terminating
at the end of March. Not to be repeated until next year about this
time.

If you want an R10 get it in the next few weeks.

Check our website for ICOM receiver prices. R10 $489 + UPS, till end
of March. With TWO YEAR warranty no one else offers.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <563>

.....
>From the Editor's Desk:
As we continue to dig out from the Storms of '98, please send us your comments and observations. If you are a responder, what happened where you work/live? Let's share your knowledge with the group. A special thanks to the list members who sent in weather related sites to share.

Make sure to sign up for this year's ERI in Sacramento! The registration address is in the 'Current Events' section. - Dave Larton
.....

>From the mailbag:

To: David Larton/OES
Subject: RE: ACS Newsletter/Forum

From: Edward E. Addy (KE0EG)

Thanks for sending me a copy of the ACS newsletter. Very interesting and accurate.
I would like to bring up another problem not covered by the newsletter, as well as some personal observations and opinions. If nothing else I hope it will start some interesting discussions.
Following a large disaster which has disrupted local communications, and most do to at least some degree, it is often true that the only folks in the area that are able to provide immediate communications support are those in
the amateur radio community.
Unfortunately, those in the amateur radio community also have families that

must take top priority, which limits the number of amateur radio operators that are available to assist.
Yet another limiting factor is the fact that bringing amateur radio operators into the disaster area from outside the disaster area, on short notice, immediately following the disaster, is difficult due to the fact that roads may be closed. The housing, feeding and care of these additional people in the disaster area may be difficult to provide at best and must be weighed against the resources available in the area needed to serve the disaster victims living within the area.
With every disaster our organization has responded to, we have seen one fact take place over and over again. Initially the amateur radio community makes a very strong showing which lasts for a day or two. After that we have found that the numbers begin to drastically fall off, as many must start putting the lives of their own families back together. Others become tired or board with doing that same thing over and over again and fail to show up. Yet others will not be able to help after the first couple of days as business in the area try to restart and need all of their employees to get their companies back online.
Time and time again I have watch as the local amateur radio community struggles and struggles to try to maintain at least a minimum levels of real communications capability. It is important to remember that as the hours and days of the first week or two pass following a major disaster, the need for communications continues to grow as organizations and agencies begin to get organized and deploy their staff and volunteer into the disaster area to provide assistance to the survivors.
We have been working to address this problem for several years now. We have not had much success in getting our ability to respond put online, even though we have tested our emergency communications concepts and have found them to be solid.
Our first problem comes with the difficulty of raising the funds to acquire the communications equipment needed to equip our response teams. The second problem we see, and part of the reason for the difficulty in raising the
need funds, is that people just do not see the importance of being prepared and do not feel it is important to fund preparedness activities.
Yet another problem, which is somewhat political, is the amateur radio communities frequent reactions to PooHoo and cut down anything that would be able to assist with communications within the disaster area that is not based in amateur radio. When, in my opinion, they should be the first ones to realize the capability of other communications resources and welcome their help in serving the community in which they live.
I have nothing against the amateur radio community and in fact support and applaud the hard work that these folks provide in their communities every time a disaster occurs. In fact, many of our 300+ volunteers, as well as myself, are amateur radio operators. Our organizations was designed to serve the communications needs within a large disaster area, for the purpose of speeding aid and relief to the survivors by allowing the relief organizations to have the communications they need to better coordinate their relief activities.
Amateur radio can not and should not be expected to be able to provide 100%

of the backup communications needed within a large disaster area. I believe that many amateur radio communities attempt to give their local emergency management people this idea, which causes two things to happen. First, by
giving emergency management the false impression that amateur radio is all they will ever need in an emergency, helps to make sure that they are the only ones available to respond in an emergency. Secondly, giving this false sense of security to their communities emergency management removes the desire for their local emergency management to seek out, incorporate and support other communications resources. And, perhaps the most important result in misleading their emergency management in this way is the harm and increased suffering that will come to those in their community when a disaster does occur and they find they really do not have the ability to provide the needed high levels of communications for the extended period of time, maybe weeks or months, following the disaster. And, their local emergency management is left out on a limb, caught short, and not knowing of other communications resources to call on for help.
As an amateur radio operator myself, I feel that every amateur radio operator that helps their community to prepare and then responds when they are needed to do disaster communications support, and sticks with it, should be commended because they indeed represent the first line of community level emergency communications support. Without their efforts large disasters would no doubt claim many more lives and the amount of suffering would most assuredly increase dramatically.
It seems to me that the amateur radio community can very easily provide an additional function to the emergency management department within their community. As they are involved in communications, they could help to serve as consultants and advisors, bringing to the attention of their local emergency response agencies any and all emergency communications resource information they are aware of, currently available or being developed, amateur radio related or not.
I believe that if adequate emergency communications is to be provided following large scale disasters, it will only be by bringing all emergency communications resources online as quickly as possible, whether they are amateur radio related such as RACES, ARES, SATERN or military related such as MARS or CAP, citizen band related such as REACT or commercial such as NACEC. Alone, no one of these organizations can realistically provide the level of communications that is needed following most large scale disasters.
However by working together I believe that we can come much closer to reaching this goal.
Each can do things the others can not. MARS and CAP for instance can operate outside of the amateur radio spectrum, this can give them clearer frequencies to handle traffic. REACT frequently operated on the citizens band part of the spectrum, even though short range usually less then 15 miles, their radio equipment is very easy to come by and can be operated by almost anyone. NACEC can access almost all of these spectrum areas, but for internal disaster area communications our plans are to operate primarily on
the commercial UHF/VHF spectrums and for long haul communications we have

used federal HF and plan to add commercial satellite.
I believe that if we are all going to be successful in this effort to serve our communities, we must find a way to successfully work together. I also believe that the politics must be taken out of helping people in an emergency and the focus needs to be put back on how we can best HELP. This concept of competing organizations is 100% pure nonsense. The practice of organizations trying to act like self contained islands some how protecting and defend their organizations boundaries from those other organizations that appear to be doing something similar or trying to bring them resources that they do not have the expertise internally to provide for themselves, needs to be stopped and quickly. It seems that a much better approach would be to find a way to link everyone of these organizations together and share the abilities of each to get a much better job done. I do not mean just working together superficially, but really working together to benefit the people we serve, which are one in the same.
To those of you that are trying harder to maintain your organizations image then to actually serve your community I condemn you for the suffering that you have already caused or will cause the men, women and children living in your community.
To all of you that are doing all you can to serve your community and using your organization as just a tool through which you can get the job done, I commend you for all of your marvelous efforts. I hope you will continue to keep up the good work because you are the real disaster response organizations, the only ones that can really be counted on.
Let me assure you that this organization, NACEC, stands ready to work with any organization that feels we have something to offer them in helping them better serve their community, either in helping develop their pre-disaster preparedness plan to includes NACEC's resources or by responding with NACEC's resources when requested following a large scale disaster.
If you would like to talk with me and go over the possibilityof what we may be able to work together to accomplish, please call me at 612-798-4269. I am eager to hear any ideas that you may have that will help our organization to better serve our communities.
Thanks for the opportunity to put my 2 cents worth into this very important and worthwhile forum.

This week's EMCOMM Bulletin:

EMC119 Times have Changed!! For release 2/16/98

>From "TAC ONE", San Diego County RACES publication Vol IV, No. 2 9/20/96 in an article by Tim Powers, Training Officer:

"The concept of training has changed over the years. When I first started in volunteer emergency communications, all that was needed was the license issued by the Federal Communications Commission, the radio equipment and the knowledge of how to operate it. Well, times have changed.

Today we are asked to perform a variety of tasks, each with a particular list of requirements, using a diverse array of equipment, and for an ever growing list of agencies. RACES is asked to provide communications support for CDF (CA Dept of Forestry), San Diego County SAR (Search and Rescue), San Diego County Sheriff's Department and the Office of Emergency Preparedness. We are asked to use Amateur radio, phone, packet, ATV, government radio systems, cell phones, and at times, to hand carry written messages. And the list seems to grow with each passing event."

The remainder of the article described a series of upcoming training classes. Basic Orientation was one. Another was on the Incident Command System. Others were on Packet, Basics of Public Safety Radio systems and RCV Orientation. "Those in Field Operations must add Wildland Fire Safety, RCV Radio Operator, Helicopter Ground Safety, First Aid and CPR. Additional specialty classes may be mandatory for your particular assignment."

Their goal "is to ensure that all participants have the knowledge that will provide them with a safe working environment."

In the same issue there was a report of a response to an Animal Rescue unit, one of the many opportunities of service that Tim didn't mention in the above article.

After a vegetation fire broke out the Animal Rescue Reserve responded to protect any threatened animals and the RACES unit responded to supplement Animal Rescue's communications. (Ed: horses, cattle and pets.) That particular event only utilized five unit participants for their nine hour involvement. (edited.)

In a pinch, it could, but WD-40 isn't "contact cleaner".
It is a heavy organic solvent, a volatile, and a light lube.

> BUT I WOULD NOT SPRAY KEROSENE ON MY SWITCHES.

There is something peculiar with your train of thought.

> ....GOOD LUCK

It isn't a matter of "luck".

> would you want to spray a lubricant "oil" on pots and switchs?

Ummmm....to clean and lubricate them.

> The idea is to clean them, not lubricate them.

Where did you concoct that idea?

> Same thing with Silicon based sprays.

Now I wouldn't put silicon spray in any of my electronics or
mechanics. But then, I think in your rush to spew, you either
failed to see the difference, or didn't know how to spell
"silicone". You did mean "silicone", didn't you? Silicone
is different.....bearing no relationship to silicon.

> They coat the contacts with a non-conducting film
> and that's not what you want.

Why not? You sure as hell don't want a conductive film!!!
The pressure of the switch contact or potentiometer pad
presses through the non-conductive film anyway, so who
cares? The idea is to clean AND lubricate old and well-used
switches and pots. Else, replace them......

I take it that you *think* other "tuner sprays" and
"contact cleaners" aren't "petroleum based?

Ummmm.....guess what pal? They're ALL organic solvents
with but a molecule or two's difference from one to the next.

WD-40 is absolutely excellent for cleaning and lubing dirty and noisy potentiometers. Wean yourself away from that old wive's tale. You're not a wife anyway, are you?

Okay, don't. Your loss.....

> Attention BillCheek!!!! Was this in your book ?

Which one?

> Again not everyone agrees with you.

That's fine.......so long as you don't WANT to use
WD-40 as a potentiometer lube and cleaner. It isn't
a matter of personal opinion that it can't be used
or that it is bad to use it.

Just as the sky IS blue, regardless of your opinion,
so too is the fact that WD-40 can be used to restore
the glide and silence of noisy and gritty potentiometers.

THAT isn't a matter of opinion. It is a fact, born out
by years and years of experience....

> Will you cuss at us

Who is this "us"? Who are you representing? I don't
talk to "us". I address persons, each to his own....

> and call us all morons.

When you debase me and my years of experience, I'll
go so far as to call YOU an utter imbecile like your
sister, Mackey, yes.

> You maybe the one who needs valium dude!!!!

Oh.....I can't cuss and call you a "moron", but you can
run off at the rectum with your own tangents? Lemme see

the horse you rode in on.

> Not surprised that Bill "know it all" Cheek has already
> told someone to use WD-40 just be carefull.

Yes. I said "be careful" by observing that WD-40 makes
a great flame thrower.

> I know that I don't know it all like Bill

What exactly DO you know?

> but I'd say buy contact cleaner at the local RS

Oh sure....that's cool.....*IF* you know the "right stuff"
and *IF* they have it. But read the fine print on their
spray cans. Most of the stuff contains lubes and organics.

So what's the difference, rectal jaws?

> and avoid any damage and pitting of the wiper arms
> in variable resistors.

How is a light organic going to "damage and pit the
wiper arms" of variable resistors?

Are you an imbecile like Mackey?

> BTW spray some up your I. F. can---Billy Boy
> Bill must have been a rule of his thumbs again Cheek is wrong another
> time.!!!!! Rick

Yes, I guess you proved and substantiated your case very well.

So write a book cautioning against the use of WD-40.
Or write a book, period.

Eh?

What an imbecilic statement! You can't FIND
a "silicon based cleaner" anywhere, you dumbass.

> WD-40 & other petroleum based fluids will make you think you solved
> the problem for a short time then the problems return worse than before
> because petroleum fluids ATTRACT dirt & dust.

That is silly. Spray a dab of WD-40 on a wall
or shelf somewhere and watch and see what happens
to it over the hours and days ahead.

All you have to do is try it, Ignats. It isn't
a matter of "opinion". It is another one of those
empirical sorts of things that needs no conjecture
or other deeply involved contemplation.

Just try it, dummy.

> Anyone who would recomment WD-40 for cleaning potentiometers
> does NOT know what they are talking about!

After your use of the words "silicon" and "recomment",
are you asserting that you know what YOU are talking
about? <giggle> <titter> <smirk> <belly laugh>

You are, indeed, a classic north end of a
southbound horse, Smacksie.

And an idiot.....(with a hermaphrodite brain).

> available?

Call (800) 442-2425 for the manual.

In a word, the PRO-2022 uses a different type of
system clock oscillator, a basic 2.000 MHz ceramic
resonator tied directly to the CPU's clock ports. (CX1)

It wouldn't be very well suited as a reference standard
like X-301 in the PRO-2004/5/6 series.

You can order a spare PRO-2004/5/6 X-301 from (800) 442-2425
and build it, a +5v regulator, and a buffer amplifier on a
piece of perfboard and have the same benefit. I think I
explained that in "THE ULTIMATE SCANNER - Cheek3", too.

You don't have to download anything you don't
want, period. Learn how to control your own
computer and make it behave and then you won't
have to worry about what other people do.

> I see no relevance to the scanner
> hobby from these two guys here.

Soooo, was your post any the more relevant?

Seems to me that you're admitting your computer
is out of control and you don't have the foggiest
idea of how to tame it.

Eh?

This *is* virtuality, you know. It is exactly
what you make of it. Nothing more. Nothing less.

We may not be able to control drugs and crime on
the streets, or Clinton in the White House, but
it is a personal problem if you can't control your
own computer.

Your happiness (or lack thereof) with this newsgroup
is not.....or should not....be in anyone's hands but
your own. You are not a victim here....unless you
CHOOSE to be one.

Think about it.

I'll be dipped! Here I have my Twit List temporarily
disabled and you appear with a most profound and
succinct reply to the newbie.

Couldn't have said it better meself, though I tried.

(That's a compliment, in case you didn't notice.)

Keep it up and my Twit List will decrease by one.

:-)

You *CAN'T* make the CPU do something that is not
already programmed into the firmware. Ferinstance,
if the code doesn't exist for tuning the cellular
bands, then no amount of monkeying with the keypad
matrix array will work.

Likewise....if there is an RxD port, but no firmware
for cellular, then you're not going to get it, no
matter what you do or what instructions you send into
that port.

In a word, you can't get blood out of turnips.

5190. Berkeley CA--More Detail

Newsgroup: rec.radio.scanner
Date: 1998-02-15 00:00:00 UTC
From: gallen@lanminds.com
Message-ID: <gallen-1502980239280001@prope-ppp3.lanminds.com>
Source record: 170378

Berkeley police operate primarily on 460.175 MHz, and their secondary channel is 460.250. Their records inquiry channel is 460.05. They have MDTs which operate on an 800 MHz channel.

The fire department has several channels, but primary is 154.190 MHz. When they have a working fire, they switch to a fireground channel in the 154 band. They occasionally use a secondary channel on 154, too.

Does anyone know what type of trunk system New York, New Jersey, and Port Washington (NY) use? We'll be staying in Port Washing with frequent trips into New York and New Jersey, and I'd like to bring my 235 along...

Any good police freqs (any range) for these areas you could pass on?

Thanks for any info.

John

Some guidelines for posting here on Mean Street (rec.radio.scanner):

Don't take the chance of being caught mis-spelling a word! oh gawd heaven forbid that!

Be sure to proof read your proposed posting several times and have a professional to do this if possible! If there are grammatical errors you could pay severely!

Don't ever give simple, practical answers to help answer someone's question lest ye invite the wrath of all the "scientists" here that just wait to pounce.....

Know before hand what you might be getting yourself into. Is it really worth the personal attacks, ridicule and just general disrespect that thay may soon come your way for having the audacity to post here on Mean Street?

Most importantly, don't post here if YOU CAN'T HANDLE HATE!

5194. Re: Why Icom dropped price on R-10 Scanning receiver ?

I also HAD an ICOM R-10. While the promises Windows programming software never materialized, the radio was a fine performer. I only got rid of it because of the lack of software.

The only thing I did not like (other than the slow scan speed) was that, while you could put an alpha tag on a channel, the tag would NOT show when scanning -- only when you tuned to the channel and then only for a couple of seconds -- other than that a good radio.

>Some guidelines for posting here on Mean Street (rec.radio.scanner):

you forgot to add: use fictitious e-mail names and addresses so that you can post messages without being held accountable. oh wait, you did that, so i guess you already know.

.>t mis-spelling a word!

,>Be sure to proof read your proposed posting several times and have a professional to do this if possible! If there are grammatical errors you could pay severely!

er, misspelling is how you spell it. and its proofread, not proof read. and "...have a professional to do this..." is grammatically incorrect, and oh, never mind...

thanks for sharing

Max Innis

A COUPLE QUICK NOTES ABOUT SOME OF THE FREQUENCIES
WHEN IN THE SCAMBLED MODE , THEY USE DIGITAL ENCRYTION SYSTEM ,
WHICH ON THERE MODELS ARE , MADE BY MOTOROLA. DIGITAL ENC. SOUNDS LIKE
TONES OR BEEPS AND IS NOT VERY EASY TO DESCRAMBLE , REASON BEING , IS THAT
IT IS NOT PHASE INVERSION, THE SYSTEM USED BY SHERIFFS AND OTHERS , DIG.
SCRAMBLING USES A PRESET CODE ON EACH UNIT THIS NUMBER RANGES , SAY 10,000
DIFFERENT COMBINATIONS COULD BE USED. SO THAT MEANS THAT YOU WOULD JUST

SIMPLY HAVE TO TRY EACH AND EVERY POSSIBLE COMBINATION. THIS WOULD TAKE CONSIDERABLE TIME. PLUS THE FACT THAT THEY ARE MORE OR LESS CHANGED PERIODICALLY. WHAT YOU WOULD NEED TO DO IS HAVE SOME TYPE OF PROGRAM THAT COULD SAMPLE EACH COMBINATION AT VERY FAST RATES. IF YOU ARE INTERESTED IN SCRAMBLING YOUR COMMINCATIONS, BE IT THE PHONE LINES, TWO WAY RADIO, ETC. PALOMAR MAKES A NICE PHASE INVERSION, CURRENTLY BEING DISCONTINUED. OR THE DIGITAL ENCRYPTION SYSTEM ALSO MADE BY PALOMER THIS UNIT SELLS FOR AROUND 400.00. NOTE THAT PHASE INVERSION IS PRETTY EASY TO CRACK, YOU COULD EVEN RECORD FULL SESSIONS OF A PHASE INVERTED CONVERSATION, AND THEN LATER DESCRAMBLE IT FROM YOUR RECORDER.

BUGGING FREQUENCIES

There has been an increase in the use for using wireless transmitters not only by Law Enforcement Agencies but for private gain of information. Bigcompanies bug there competition to find out about new products and such,husbands/wives bug each other to find out if the other is having an affair,and so on. Wireless transmitters are not only used for these purposes you can find them in use by your local preacher at church, or entertainers whileon stage and police officers with video recorders in their cars. Put these freq's in your scanner and drive around and see what comes up.

Common search bands

49 - 50 Mhz. 72 - 76 Mhz. 88 - 108 Mhz. 174 - 216 Mhz.

Known frequencies used by Entertainers and for Surveillance

30.84 33.12 33.14 33.40 35.02 39.06
42.98 149.35 150.775 150.79 151.625 154.57
154.60 154.695 154.995 165.9125 167.3375 167.3425
167.4875 168.0115 169.20 169.445 169.505 170.245
170.305 171.045 171.105 171.45 171.845 171.905
172.000 172.200 173.225 173.3375 457.525 457.55
457.5625 457.575 457.60 467.75 467.775 467.7875
467.80 467.825 467.85 467.875 467.90 467.925

Federal Agencies seem to stick within there band when using wires

162 - 174 Mhz. 406 - 420 Mhz. Federal Body Mics 169.2 - 173.4 Mhz.
40.22 is still a favorite

Bumber Beepers

Bumper Beepers are used for the tracking purposes of a car "vehicle" to keepup with the actions of an individual. They can also be used on the person ofan agent or individual to keep track of his position..

Frequencies for Bumper Beepers

30.85 - 30.87 30.89 - 30.91 30.93 - 30.95 30.97 - 30.99
31.01 - 31.03 31.05 - 31.07 31.09 - 31.11 31.13 - 31.15
31.17 - 31.19 31.21 - 31.23 31.25 - 31.27 31.29 - 31.31
31.33 - 31.35 31.37 - 31.39 31.41 - 31.43 31.45 - 31.47

31.49 - 31.51 31.53 - 31.55 31.57 - 31.59 31.61 - 31.63
31.65 - 31.67 31.69 - 31.71 31.73 - 31.75 31.77 - 31.79
31.81 - 31.83 31.85 - 31.87 31.89 - 31.91 31.93 - 31.95

467.9375 - 467.9875
40.22 ---- known active in Las Vegas

According to the Pop Com July 89 article, there has been an increase in theuse of Cellular Phones for the purpose of surveillance, mostly by FederalAgencies and larger Police Depts. Most police officers have been lead to belive they will not be listened to if they use cell phones which is nottrue. One box made for five thousand dollars can actually home in on a cellphone number, and track it. The operator need not listen to every onein town talking on cell phones at one time. Most cheap police scannersstarting at one hundred dollars can listen to cell phone freqs, and byputting the police channel you want into priorty keeps you from missingany specail police calls you want to listen to while scanning cell phones.Many units also sell for less than one hundred dollars that can grab any freq out of the air when near them. A person could pulg freqs into a scanners that got close to them fairly quickly to see if persons near them talking on a radio/cell phone were talking about them, thus the word counter intelligence.

A few ideas: Drive around with these freqs in your scanner, bugs use low wattage so you will have to be pretty close to monitor. Another idea is thenext time a concert comes to town, get as close as you can to the arena andsearch through these bands, this could also be done at stage shows, etc.

Patricia,

I have a friend that has thought about doing this. He works for a pager company and must do propagation studies to tower sites. As far as the radio is concerned, there is no output to do this without getting into the box and tapping into the circuits.

The easiest way to get signal strength would be to use the serial port and ask the radio what the current signal strength. There is a command to do this. This would require that you also set the frequency, receive mode, etc. through the serial port. Actually this is the only way you can do it as the radio has no control panel. I have a file that John Wren jcwren@atlanta.com posted (thanks John) a while back that explains the control codes required to do this.

I don't know about mdtw1234, but the original mdt works find under windows
on a fast enough CPU.
also, the version coming out with trunker3.7 does as well.

when you get to edacs.exe at 9600 bps, a 200mhz pentium-pro tends to loose
frames but does catch some
under windows.

sometimes a simple OS for a simple task is fine.

what we really need is a little cpu chip that can connect between our slicer
and serial port to push the bits
in serially so you get interrupt-per-fifo instead of
interrupt-per-bit-change.

That will be *very* hard for Toilet Boy. He barely finished eighth grade and never went to high school. He'll use a lame excuse about someone else needing to show proof before he does. Just his way of lying and transferring blame to someone else for his miserable existence.

> 2. Name, address, years worked, where you have worked in the
> Two Way industry, along with specific job responsibilities.

The closest he's ever gotten to a commercial two-way radio is in a police
car. He was in the back seat and he'd just been arrested for solicitation
in Portland's notorious fruit loop.

> 3. Name, location, and class titles, of schools sponsored by Motorola
> that you have attended.

The only thing Toilet Boy knows about Motorola is they are in the electronics industry. The only "Motorola" schooling he had is trying to figure out how to set his Motorola clock radio.

> 4. Your actuall ISP address, not the USA.NET crud.

Toilet Boy steals his Internet access. He'll never admit to having a legitimate account.

> Now, these are all things that you have stated to me, that you have
> done. It should not be a difficult thing to prove.

Yes, Toilet Boy has made these statements. But, he has uttered more lies than truth in the last two years. Ergo, it will be absolutely impossible for anyone to prove what doesn't exist outside of Toilet Boy's tiny mind.

> Let's approach these things in an adult manner, not with statements
> about "I have posted those before" and "Not until you send me yours"
> etc.

Asking Toilet Boy to behave in an "adult manner" is asking quite a lot from him. Kind of like an oxymoron. He still hasn't finished going through puberty, so I'm doubtful anything remotely resembling your requests will come from him.

Dream on.

If you're desperate for a "quality" base scanner, you'll come up with more
$$.

If you're desperate for an inexpensive scanner, you'll come up with a
lower-quality unit.

Good explanation Steve, thanks. Along this line of thinking: Does the triple conversion scanner get rid of *all* image frequencies. I've heard people tell others not to bother with chancy scanner mods when they can simply listen to the images of certain blocked frequencies. Does the triple conversion scanner make this advice obsolete?

Still haven't answered the question yet Petey. What are you trying to hide? Still paranoid after all these years?? Scared that others will read what you write?

> HAHAHAHAHAHAHAHAHAHAHa!!!
> You dumbshit! Never been married, much less kicked out.

Really? No son either eh? What, were you telling a lie when you cried your eyes out about your miserable life on alt.depression?

> Now get back to your Matty Mattel Monitoring post

Mattey Mattel? Hmmm, something you picked up from one of your kiddy students? Oh wait, you didn't deny the dismal life in the studio apartment doing the tavern band scene. OTOH, Petey got himself a trunk tracker. He thinks he's a real scanner pro now. Well he does until it comes to hooking up his antenna. Bawahaha!

> and try to find someone to eavesdrop on that has a life, flunky.

Is that what you do Petey? I don't need to. I'm not a burned out has been like you. You have been on Prozac or its relative for many years now. How can you really tell what is reality and what is not?

> Oh, and respond to this post. NOW!!!

Is this another of the "tricks" your little students have taught you? What next, going to hold your breath? Cover your eyes and pretend nobody can see you? Bawahahahaha! You telling someone what to do. Bawahahahahahaha! ROFLMAO!!!!

Gosh Petey, you didn't respond to a single technical issue I brought up. How come? Where are those antenna words of wisdom Boy Petey?

(splonk!)

You would be able to use WinTone to do exactly what you want. It would be best to have a REC OUT on your scanner, but using a headphone jack would also give decent results. Go to http://www.steaksandwich.com/ to download the software. It is shareware, so if you like it, take the time and ~$15 to register it. I don't use WinTone, but use Probe software linked to my OS535 interface. WinTone is also a voice-activated recorder throught the soundcard which is handy in other ways. Its worth a try!!

Wiggie

I have not tried anything relating to the 800 Mhz range, but while I did capture two freqs I have been trying to find for the last 2 months it did well. I was not at all dissatisfied by it performance.
I was able to capture two portables aprox. 50 ft. away a got a good lock in filter mode.
You can also add an external Ant. with the correct plug to receive better that with the optinal Ant.

Dan:

For a desk-top unit, probably the BC895XLT Trunktracker. Might run a shade more than $300.00 however. When I bought mine, it was $340.00, but worth it!

Gosh Glen, I have and I do.

> As for me, I've never bothered to hook up a scanner to a TV antenna,
> since the directionality of the beam defeats the whole idea of easy,
> omnidirectional scanning.

Unless the signal is directly in a null a TV antenna will still function fairly well as an omni. I would suggest at least giving it a try if you have a TV antenna ready and able to be pressed in service. Very little to lose and the possibility of much to gain. Good play on words too, ehh? IOW, if you have it, try it.

Many times you will find that a high percentage of the local listening you do comes from one general direction. All I have to do is point my uhf/vhf antennas north and I have the majority of Puget Sound/Western Washington community and part of British Columbia in sight of my antenna. I do use rotators but seem to always find them pointed in the same direction, someplace north or just east of north and I don't seem to miss much.

So what do you think Glen? Might be worth a try.

I have the following items for sale. General terms of purchase are:

All items are sold "as is", with no implied warranty. Payment shall
be made prior to shipping with postal money order, cashiers check (or
personal check with appropriate clearance period). COD arrangments
will be considered but are not to be assumed. All prices include
shipping costs unless noted. Shipping from Columbia Maryland area
to US Lower 48 by FedEx unless buyer prefers other (US Post, UPS).
Items may be withdrawn from sale at anytime without further notice.

ICOM R7000
Original owner
Purchased Aug 90
99 Ch Scanning Communications Receiver
25MHz - 1000MHz, 1025MHz - 2000MHz
Unit is continuous coverage 25MHz to 2000MHz except for gap
from 1000MHZ to 1025MHz.
AM/NFM/WFM/SSB
with EEB Scan Delay Mod (stays on channel until carrier drop)
with IC RC12 Remote Controller
with IC EX310 Voice Synthesizer
with IC CT17 RS-232 to CI-IV/CI-V Level Converter (un-used)
with IC TVR7000 TV Adapter (video output)
with IC CK70 DC KIT (un-used)
with IC MB12 Mobile Mount (un-used)
with IC SMR7000 Service Manual
with original box, packing materials and documentation.
Unit is in excellent condition.
Price: $850.00

for more details see

http://members.home.com/malmberg/r7000.htm

ICOM R71A
Original owner
Purchased Dec 90
32 Ch Scanning Communications Receiver
100KHz to 30MHz
AM/SSB/FM
This unit does not have PassBand Tuning
(10Hz tuning step eliminates need)
with IC EX257 FM Demod
with IC RC11 Remote Controller
with IC UX14 CI-IV/CI-V Converter
with IC SMR71A Service Manual

(with failed(?) IC EX310 Voice Synthesizer in box)
with original box, packing materials and documentation.
Unit is in excellent condition.
Spent most of time in ventilated cabinet away from dust.
Price: $550.00

for more details see

http://members.home.com/malmberg/r71.htm

ICOM R1
Original owner
Purchased May 91
100 Ch Scanning Hand-held Communications Receiver
100KHz to 1300MHz
AM/NFM/WFM
with IC LC57 Soft Case (showing wear, but has protected unit)
with IC 150-FA430BB 430MHz Antenna
(this antenna has smaller profile than stock antenna)
with original box, packing materials and documentation.
Unit is in excellent condition.
Spent most of time running from AC
(battery discharged approx. twice per month).
Early production unit of this model. This radio does exhibit
poor selectivity, but size is astonishing (especially seven years ago).
Unit will perform well even in crowded RF environments, however,
selection of key frequencies may be necessary, especially if near
transmitter sites. Unit is continuous coverage 100KHz to 1300MHz.
Price: $300.00

for more details see

http://members.home.com/malmberg/r1.htm

BEARCAT 101
Original owner
Purchased Jul 76
16 Ch Scanner
30 - 50, 146 - 174, 416 - 512 MHz
with extra schematics received from Electra.
with original box and documentation.
This is the first synthesized scanner produced by Electra.
Stored in original box. Unit has been operated a few times
for several hours in past 10 years. Appears to be failing
to lock onto frequency on some channels. 154, 162 MHz
regions appear good. Does not appear to accept new programming
throughout tuning range. Several channels no longer scanned.
Price: $100.00 (shipping NOT included)

for more details see

http://members.home.com/malmberg/bc101.htm

BEARCAT 100
Original owner
Purchased Jan 82
16 Ch Scanner
30 - 50, 138 - 174, 406 - 512 MHz
with extra schematics received from Electra.
with case, antenna, AC adapter.
with original box, packing materials and documentation.
This is the first hand-held synthesized scanner produced.
Unit has been operated primarily on AC with battery cycling
approximately every other week. Due to poor case design,
a re-inforcing plate was fit to bottom (made of black plexiglas).
Price: $100.00 (shipping NOT included)

for more details see

http://members.home.com/malmberg/bc100.htm

REGENCY ACT-E 16 H/L
Original owner
Purchased May 74
16 Ch Scanner (crystal based)
30 - 50, 148 - 174 MHz
(peaked for center tuning at 39 and 154 MHz)
with original documentation.
16 channel crystal based scanner. In excellent condition.
Has been stored for last 10 years. Comes with 8 crystals.
Price: $50.00 (shipping NOT included)

for more details see

http://members.home.com/malmberg/acte16.htm

Well I am going to tell you to go with a Radio Shack Scanner. The only reason I say that is because I have owned and been satisfied with Radio Shack scanners. If you buy a scanner you want to make shure it picks up 800mhz. I won't go into explaining why. I Don't know what price range you would like to stay in so I will give you a few suggesions. First go to Radio Shack and ask what scanners are on sale. You can get a better scanner if it is on sale they go down by $100. some times. I used to work there. If you want to listen to local police and Fire I would recomend the Pro-66. It will also scan cell phones. This is not the best scanner but it covers some good freq. If you want something a little better such as the Pro-51 you will be stepping up a little in price. This scanner would be good enough to start out on. The price is $299.00 but see if it is on sale. It has 200 chn and has 10 banks. The banks are important to what you want to listen to. So if you don't want to spend a lot of money then get the Pro-66 if you want to spend a little bit more money for a good scanner I would go for the Pro-51. If you have any other questions drop me an E-mail or advertise the Question. Also come check out my chat room at Irc.dalnet #scanning.Hope this helps!!!!!!!

435 MHz is in the UHF amateur band. No police department should be there.
You were probably receiving images of police in the 450-470MHz band on your
other scanners. If you were using double conversion radios when you heard
the transmissions, this is highly likely. More expensive units, like the AOR
scanners, use triple conversion and will only receive what they should (most
of the time).

Date: 1998-02-16 00:00:00 UTC
From: Mike <dagnabbit@monmouth.com>
Message-ID: <34E91257.9E554C2E@monmouth.com>
Source record: 170219

Howdy all! Ive run into a problem while modifying my PRO-43 - I did the mod all the way thru (moving diode D4 to D3) and put it all back together. I started it up and it looks like everything went fine. My old freqs are still in there and it searches in 30khz steps in the 870-890mhz area. Only problem is - it acts like theres no antenna connected. No signals can be picked up and even the local weather freq picks up nothing but noise. I rechecked the antenna connections but all looks ok there. Has anyone run into this problem before?? Any suggestions?? Id hate to think that its ruined but.....!

Thanx in advance!

Actually Glen, I didn't offer advise in my post to Petey Boe. Now if
that is how you interpreted it, well sorry, your problem.

> >Unless the signal is directly in a null a TV antenna will still function

> something in return. That's just basic antenna theory.

Well Glen, that is basic antenna theory. We were talking TV antennas.
You have never tried a TV antenna. I have. Most TV antennas will
function fairly well as an omni. Yes, I am sure there is a TV antenna or
two of such gain and high nulls it won't work squat as an omni. 99 out
of 100 will be a log periodic type antenna with very modest gain and
work fairly well. You're right, basic antenna theory. What was you point
other than you haven't tried using one?

>
> >So what do you think Glen? Might be worth a try.
>
> If that's what you want to do, go for it. It doesn't fit my style of

What is that??

> I'd rather put the money and effort into a better omni and
> feedline, or perhaps experiment with a multiband antenna,

Those certainly are the steps that a listener should take when starting
out in this hobby. Seems odd that people will spend hundreds if not
thousands of dollars on radios and then have a poor antenna system.

> or multiple
> tuned antennas with some sort of switching arrangement. Come to think
> of it, why couldn't it be theoretically possible to have several
> antennas and a solid state switcher that switched antennas
> automatically depending on what band you were scanning? Is there a

I suppose. A log and rotator would solve the multi band switching and
probably be cheaper and easier to operate.

> money-making opportunity here for some innovator?

Maybe?

I've had the 1000xlt for quite a while now, and from the (rather
vague) description (does it happen on all bands, or just on some? Am or
FM mode?), it sounds like either the unit is badly out of alignment or
the xtal oscillator that runs the 800 mhz section is faulty (which
happened to me). Please supply some more details...73s Mike

5243. IC-PRC1000 info and Freq database stuff

Newsgroup: rec.radio.scanner
Date: 1998-02-16 00:00:00 UTC
From: John Smith <jtsmith@mindspring.com>
Message-ID: <6c8int$net@camel20.mindspring.com>
Source record: 170237

For those who are interested in the ICOM PCR1000, I have
updated my home page http://www.mindspring.com/~jtsmith
with my observations about the 1000 after a few days of operation.
I added an Atlanta PCR1000 file called ATL1000.MCH in a zip file
for your enjoyment, if you are in the Atlanta area, and enjoy scanning
the VHF - UHF bands as I do. Otherwise there are a few memory
tables with some nationwide government frequencies that may be
of interest to monitoring enthusiasts. Some other interesting frequencies
are available as text files for downloads.

I also included my drawing about the internals of the radio which can
be applied at your leisure.

Enjoy,
73 de K3GO

5244. Just Released MDTW1234 Revision B

Newsgroup: rec.radio.scanner
Date: 1998-02-16 00:00:00 UTC
From: MDTW1234_Project_Team@Listen$oft.com
Message-ID: <6c8ibuoba1@brie.direct.ca>
Source record: 170238
Cross-posted to: rec.radio.scanner,alt.radio.scanner

MDTW1234 has been improved. It now offers online help and
a new /OUT feature that will send intercepted data to a second
PC via the same serial port. Now you *CAN* have MDTSTUFF in Windows!

This distribution includes a schematic for the All-In-One
interface, which combines the original interface, the
pass-through data lines and a null modem within the shell
of a 25pin Null Modem adapter. This interface is required
to utilize the new /OUT feature.

A sample Visual Basic / Windows program called Listener/MDT
is included to demonstrate how intercepts can be displayed under
Windows.

Come and get it at:

http://spectrum.base.org/

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284 fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)

> hobby and I can't afford two money pits :-)

Chris,
As far as the three models you mentioned above, the PRO-26 is Radio Shack's high-end handheld unit followed by the PRO-64 and then the PRO-67. The PRO-26 and PRO-67 have been discontinued and are selling at clearance prices. The PRO-26 is going for $200 which is one heck of a deal. The PRO-67 is going for $150. If you are going to get either, do so quickly as remaining stocks are going quickly and once gone, they will not be seen again!
I have written reviews of all three radios which you can find at my web site. Go to my home page below, page down to find my table of receivers and then point and click away.
Since you are new to the hobby, you might also find my Getting Started, New Scanner User FAQ and Picking A Scanner/Receiver pages useful as well. There are links to these at the very top of my page and should help answer a lot of your questions.
Good luck and happy reading!

Strong signals,

5265. Handheld Motorolas

Newsgroup: rec.radio.scanner
Date: 1998-02-16 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <6c9t29$s2q@usenet.srv.cis.pitt.edu>
Source record: 170259

Anyone seen any type of identification guide for id'ing the types of motorola HT's out there? I have seen several models and I believe most of those rigs are either UHF or VHF, and usually only have 1 or 2 channels. Knowing this would be invaluable for determining frequency that is being used. At least might tell me UHF/VHF - is there an indication of freq by a dot on the back of them? ie using iterant frequency.

The one motorola in particular I *always* see being used everywhere is a HT with two orange buttons in the middle, spaced out about 2 inches apart. I assume that this would be a two channel model. They are black.

Perhaps Motorola's web page has pictures... ?

TIA
Keith

I have an excellent condition PRO-43 w/cellular for sale including:

Original box and manual
Design EQ custom leather case ($30 value)

Near mint condition. I would give it a 9.5 out of 10. Would be very hard to find one in any better condition! Date code 12A3.

Price is $265.00 shipped to lower 48 states.

E-mail to Fbals@aol.com

>Both of my scanners are dual conversion. What kind of performance
>increase would triple conversion give me? Explain it real slow and
>don't use big words please.
>
>

In the simplest of terms, triple conversion will very greatly reduce the intermod/interference/crappy noise that you don't want to listen to, and help you to listen to only the transmissions you want to hear. It's kinda like a an extra filter to make sure no bad signals get through.

(was that simple enough?)

Ah, I see. I'm supposed to be GRATEFUL for all that crippleware that is written for an operating system that was technologically current almost 20 years ago!

If I knew how to write software, I would be making tons of money doing so. As a customer, I can observe that lots of people seem to know how to handle Windows 95's API and successfully write software for it. The MDT*** people are not among them, apparently.

Of course, today the MDT1234 production team has announced that they've found a way to make MDTSTUFF work under Windows, so this whole argument may be moot. If so, I salute the programmers.

Wow, those are really neat Petey! Did you do that all alone or did one
of your little "students" help you with them? Have you gotten any
students? You still doing the tavern band scene?

> And on alt.good-lovers, Mrs. Cheeks has been known to refer to him simply
> as 'TheGreatPretender'.......

Well, how is Mrs. Petey Boe and Spawn? Oh wait, she kicked your butt out
didn't she! Ouch! Was it the libido problem you were discussing on the
net or did that happen later? My news server missed your thread on
alt.trashed.marriages.

BTW, did the folks in that depression newsgroup ever get your Prozac
dosage corrected to your liking? You made it quite clear you were taking
prescription drugs and having problems with them. You know it worries
all your friends here on rec.radio.scanner when we see you asking for
medical advise over the net. Did you ever go and get real professional
help?

Wow, we should at least make some of this on topic. So tell me, when you
live in a studio apartment with little room or resources, what are the
best strategy for optimizing scanner resources. Maybe you could also
relate the trials and tribulations of trying to connect a scanner to an
outside TV antenna.

The one you describe is the SP-50 most likely. It is the most common
radio sold these days, comes in UHF and VHF, short and tall cases, 2ch
or models with more channels. They are computer programmed to any
frequency in their ranges, actual freq on new radios can sometimes be
found on a sticker in the battery compartment.

The 2035 is a nice scanner at half the price of the current 2042 model, but neither can be unblocked for cellular. The 2035 does get some cell images between 1100 and 1110 Mhz, but you probably would not buy it for that.

HomeSlice,

EnterDev Software does manufacture the RS-232 interface cable in both DB9 and DB25 configurations. We are currently selling the cable for an additional $10.00 with the purchase of the registered copy of PC 895. To purchase the cable separately, the price is $ 15.00 plus shipping and handling. We also have a link on our download page on how to build the interface cable yourself with parts that you can find at most Radio Shacks and computer stores.

If you would like to purchase the cable, please send a check or money order payable to EnterDev Software in the amount of $20.00 ($15.00 for the cable and $5.00 for shipping and handling), along with your name, address, city, state, zip code, and phone # to :

EnterDev Software
3370 North Hayden Road
Suite # 123-140
Scottsdale, Arizona 85251

Orders paid by personal check will be shipped within 5 - 7 days of receipt of your order.

Adam Goldman

allsafe <allsafe@netwit.com> wrote:

>Both of my scanners are dual conversion. What kind of performance
>increase would triple conversion give me? Explain it real slow and
>don't use big words please.

The basic improvement that triple-conversion gives you is freedom from common signal "images". It is hard to describe without using big words!

This is related to how a receiver works (RF conversion & detection). The "wanted" RF frequency you want to listen to is "converted" to another frequency (called the "intermediate" frequency, or "I.F." for short) so it can be more easily "detected" (converted to an audio signal) so you can hear it.

Because of the nature of the mathematics regarding RF conversion, a double-conversion receiver can hear signals OTHER than the "wanted" signal if they are present (because the mathematical image frequency is still inside the receiver's frequency capabilities).

Triple-conversion receivers have an extra conversion, so the conversion images are outside the receiver's capability to receive them, so they cannot be detected and won't interfere with your reception of the "wanted" signal.

Whew! For a minute there I thought he wanted to mount a Q-siren on a Jeep Grand Cherokee! Hehe! It should fit under the hood or behind the grille with no problem. Hehe!

If the laptop has a pcmcia (PC card) type 2 slot, there are PC cards that
have 1 or 2 configurable serial ports that are high speed. I don't have
the URL handy but the company is called socket communications.

Considering it's FREE and not costing you anything. I would say yes,
you should be thanking the developers who could have just as easily
charged for it. (And people would still be buying it).

>If I knew how to write software, I would be making tons of money doing so.

Then your admitted ignorance of software coding further underscores the
fact you should not be complaining about something that other programmers
have chosen to DONATE for FREE at NO CHARGE !

Now, friendly technical comments concerning features to incorporate into
future revisions of the code are probably welcome and encouraged.

>As a customer

You mean "leech" don't you ? I've seen the AOL warez puppies, all they
do is say 'gimme, gimme, gimme, gimme', but never contribute any uploads
or original code to my FTP site (virus code). It's always - take, take,
take, then complain about how long it takes to download, or how lame
the program was. Never a 'thank you' for making it free.

Ok, John.

Here is a specific challenge. In order for it to be met successfully,
it will include SPECIFICS, with no qualifications.

1. Name, program, years attended, where you have recieved your
"Masters of Communication Technology" or whatever degree you claim.

2. Name, address, years worked, where you have worked in the
Two Way industry, along with specific job responsibilities.

3. Name, location, and class titles, of schools sponsored by Motorola
that you have attended.

4. Your actuall ISP address, not the USA.NET crud.

Now, these are all things that you have stated to me, that you have
done. It should not be a difficult thing to prove.

Let's approach these things in an adult manner, not with statements
about "I have posted those before" and "Not until you send me yours"
etc.

Thanks John.

I also would

> Do you use another name on the internet?

Well, Wally, that all depends on what you call
"the Internet". As for the newsgroups, the Web,
ILS, FTP, Gopher, et al, I just go by plain old
everyday, ordinary "Bill Cheek".

I can't think of any other moniker by which I
am know or even use, though my old CB handle
still comes in handy here and there:

"Doctor Rigormortis"

But I don't use it to disguise my identity.

I have a number of e-mail accounts where choice
of address isn't always possible, though in most
cases, I was able to snag "bcheek", or in some
cases, "wcheek".

Why, Wally?

>triple conversion scanner get rid of *all* image frequencies. I've heard
>people tell others not to bother with chancy scanner mods when they can
>simply listen to the images of certain blocked frequencies. Does the
>triple conversion scanner make this advice obsolete?

Generally, this advice doesn't work well in a properly designed
triple-conversion receiver. It depends on a number of factors.

The funny thing is, the "wanted" signal is just as much an image as
the "image" is! When you beat 2 frequencies together (the receive
frequency and the first IF for the first conversion, as an example),
you get both the sum of the two, and the difference of the two. One
of these resultant "images" is the wanted frequency and one is the
unwanted "image". Which one is which depends on the receiver design.
The idea is to make the wanted image to fall inside the receiver's
"window", and the other to fall outside this "window" (passband).

The theory is that the filtering and passband (range of frequencies it
can detect or pass) of the receiver work together to minimize the
detection of the unwanted image and maximize the wanted image. The
wider the passband (bandwidth) of the receiver, the more LIKELY it is
that the unwanted image can be received, but the design of the
receiver is to minimize or eliminate this unwanted image so it is much
less likely to be picked up, even if you go looking for it.

Unwanted images should ALWAYS be much lower in level than the wanted
image in a properly designed and aligned triple-conversion receiver.
This doesn't necessarily mean that they are totally undetectable, just
so low that they are essentially not usable.

These unwanted images can be very detectable on a dual-conversion
wide-band receiver almost as strong as the wanted signal, which is one
of the primary reasons that triple-conversion receivers exist in the
first place!

From: Bob & Elaine Bagshaw <bagshaw@erols.com>
Message-ID: <34E9E9CB.1431@erols.com>
Source record: 170092

New player here with an AOR AR1000 scanner that has LOUSY reception in all bands. If I prgrm freqs out by 5-10mhz ? the station will come in, but still nowhere as strong as my Radio Shack Pro-37. Fiddling with the local/DX switch does not help either.

Can some helpful person/s point me towards a reputable repair facility or some advice and hints.

Also looking for an owners manual or such, all I got with it was a couple photocopied pages to do basic programming and such with

Many thanks.....RLB bagshaw@erols.com

If you're honestly too dumb to figure it out, then just move on, instead
of pathetically attempting to slander someone else's shorthand, but
miserably fail due to self-induced typos.

There is a lot of potential bandwith on a C-Band transponder. Most of
the times it goes unused, however some uplink providers farm it out for
various users including satellite radio, HTML pages (Vid-Cast), MDT-type
transmissions (stock tickers, news, etc.), and the studio techs often
use it for communications (both business and personal).

The bad news is that, in my experience, it is a design flaw (b-i-i-g
design flaw), not a repair problem.

For starters, I hope your in a "scanner legal" state - or have an am. radio licence. NO fun gettin' caught by the local police! Try your local Radio Shaft for all the accesories. Know what your looking for before you enter the store! You should be able to find things like multiple cigarette lighter adapter plugs and 12v to 'whatever your scanner requires plugs' for power, or just use NiCad batteries as I do, (if I was to do that sort of thing in my state)! I use the suction cup mount antenna from Radio Shack and stick the handheld in the storage space between my sunvisors, (conveniently provided by DODGE). Stick the suction cup antenna up in the tint band across the top of the windshield so it's not visible from the outside. You could buy one of those racks that mounts to your sunvisor mounts and put scanners all the way across it with suction cup antennas to block out the sun for you! If your super serious, you could buy freq. specific antennas and make that Chev look just like a PORKYpine - like the cop cars. Have fun and stay legal!!!

5326. Receiving 0.000MHz on Pro-26?

Newsgroup: rec.radio.scanner
Date: 1998-02-17 00:00:00 UTC
From: John <nospam@thank.you>
Message-ID: <6cd4fp$l9h$1@vixen.cso.uiuc.edu>
Source record: 170110

I am a new owner of the Radio Shack Pro-26. I have noticed that, if I turn the squelch down while the unit is scanning a bank with some empty (0.000MHz) channels, it will stop on an empty channel sometimes. This seems weird.

Does it really scan empty channels in a bank?

What is it tuned to when it locks onto an empty channel?

Thanks!

I have noticed that it stops on 0.000 much more easily when it's near
my powered up computer(s).

As as side note, I have a jumper wire in there (about 3 inches of speaker
wire) as part of the VD mod. This wire is longer than the chip jumper mod
since mine is epoxied. could this make it more susceptible to RF?)

It's an interesting idea - but I don't think it's worth the effort. It would be better to dedicate one scanner per band each with seperate antennas.

That's exactly what I wanted to know... Thanks.

> You can order a spare PRO-2004/5/6 X-301 from (800) 442-2425
> and build it, a +5v regulator, and a buffer amplifier on a
> piece of perfboard and have the same benefit. I think I
> explained that in "THE ULTIMATE SCANNER - Cheek3", too.

That's what I did (mentioned above), and it works
beautifully. I built it into a 2 X 2.25 X 2.75in.
RF-tight, aluminum box that had some type of UHF
pre-amp in it at one time. I used a TO-220 cased
+5v regulator, the buffer FET circuit, a 9v battery
and a switch. I just checked it against WWV before
I wrote this, and it's right on (within 1 or 2 cycles).

It's unbelievably good!

The reason for trying to use the 2022 is that the X-301 cost just under $50. My brother was hoping there was something like it in his 2022. No such luck. So, he'll have to build his from an X-301 just like I did.

Thanks again for your time.

Bill Eitner (A Bill Cheek friend and fan for nearly 10 years.)

It it entirely unwise to even joke about such a topic, there are people out there who's careers are based on following up even the smallest threat to the president. If you are as smart as you think you are don't speak of it again. They don't take it as a joke at all.. Mike K8MB.

Sound like the local oscillator signal is not getting to the mixer. As I recall these
circuits are on seperate boards. Did you connect all the cables correctly when
you reassembled it? Or did a conncetion go bad? Mine does this occasionally and
I have never been able to fix it. A good whack restores operation. Try wiggling
the connections while listening to the WX and see if you can find the bad connection.

Good luck

Tom

>Thanx,
>Bret
>

Bret,
The later version "A" does not have the ability to have the
shortwave and cellular mods done on the scanner. There are two things
to look at, the FCC ID number and the Model number. If there is an "A"
following any of these two, then the scanner is not modifiable (i.e.
FCC ID: AA020-300A and MODEL NO. 20-300A). If there is no "A" after
these numbers, then it can be modified (i.e. FCC ID: AA020-300 and
MODEL NO. 20-300). There is a rare chance that if it was bought second
hand, then someone could have taken the CPU/Logic board out of a older
model and switched it for a "A" model so they could in turn sell the
older scanner for a better price even though it wasn't
modifiable...dirty pool in other words. If you do happen to have an
unmodifiable "A" model, don't fret too much, it is a very good scanner
that is worth keeping around.

Wiggie

>
> Thanks!

John,
I am not familiar with your particular radio but I have owned several RS Pro series scanners. I believe that some of them operate as follows. They will, by default, assign "priority" to the first channel in each bank. This means that if one has not actively assigned another channel in that bank as "priority," the scanner will stop on that channel regardless of the frequency if it detects activity (squelch noise, for instance).
One might avoid this by leaving "priority" off, or by assigning a different channel (in that bank) as "priority." However, under all conditions I would expect the scanner to stop scanning and lock on some channel whenever squelch noise is constant.
Robin

5344. L-band antenna construction???

-- Hello,
Does anyone know how to construct high frequency antennas? such as
L-band S-band? or can point me in the direction of a site containing
such information.
I am interested in receiving European satellites ..Inmarsat,Meteorsat
and some Ameteur Satellites.
My receiver is an AOR 8000 (.1 mhz --1950 mhz)..and MFJ-1278B multi mode
data controller ,Diamond 130 Antenna.
I am a newcomer to this,so any info would be greatly apreciated.

Thanks..Jonny.
Alicante,Spain.

You'd think to find a good quality used scanner at a reasonable price right here on the NG, wouldn't you? Don't hold your breath. Folks around here are delusional.
There's one guy that keeps trying to sell his PRO-2026 for $150.
Ha! I bought mine NEW at Radio Shack for $99 and it came with a full factory service warranty.
My advice, check out Radio Shack. They are frequently offering clearance items at very good prices. Good luck.
John

Buy the 2006, you won't be disappointed!!!!!!!!!!!!!!!

5357. Cellular Logic board for the Pro-2042/35

Newsgroup: rec.radio.scanner
Date: 1998-02-17 00:00:00 UTC
From: Eddie Kosloski <scanist@acmenet.net>
Message-ID: <01bd3b4e$db6418a0$5ab698ce@Pscanist>
Source record: 170141
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

For Sale......I have aquired one more board scanner people.....
A Cellular capable logic board for a PRO-2042(or can be installed in a
2035)
This logic board has the European version CPU installed that opens up the
entire 800mhz range. No soldering required, a few screws, unplug a few
wires and your done, you get a new frequency range.
This logic board can also be installed in a PRO-2035 and it will
also upgrade your 2035 to a REAL 2042
ie....birdie lock-outs in the search mode,
in the ' Auto-Store ' mode it checks for duplicate frequencys before
it enters them into a memory location, skips over 0000.000o freqs ect.
This is the real deal people....NOT an Ed Cox Special !!
$ 300.00 (trades are always concidered)
Please only intrested enthusiasts, no price whinners ....
reply to; scanist@acmenet.net
ALSO
RS Cellular Modified Pro-2035 (European logic board installed)
Data/Tone Squelch Mod Installed (Bill Cheeks revised Mod-44B) works
perfect.
25-1300 Mhz
1000 channels
Very good condition.
I am posting this for a friend, all the electronics installed by yours
truly.
He is asking $ 375.00

:> 825 to 845, 870 to 915, 935 to 960 Mhz.
:>
:Actually, they are 824-849 (mobile) and 869-894 (tower). The extra
:frequencies you gave are probably images, intermod or phone
:converesations on buisness systems.

Not at all.
825 to 845 is analogue phone to tower.
870 to 890 is analogue tower to phone. That's the one to listen to.
890 to 900 is digital phone to tower reserved for 4th and 5th carriers.
900 to 905 is digital phone to tower for Telstra.
905 to 910 is digital phone to tower for Optus.
910 to 915 is digital phone to tower for Vodafone.
935 to 945 is digital tower to phone reserved for 4th and 5th carriers.
945 to 950 is digital tower to phone for Telstra.
950 to 955 is digital tower to phone for Optus.
955 to 960 is digital tower to phone for Vodafone.

Hope that helps.

Barry

5359. FOR SALE: scanners

Newsgroup: rec.radio.scanner
Date: 1998-02-17 00:00:00 UTC
From: leec71@aol.com
Message-ID: <19980217033200.WAA05034@ladder03.news.aol.com>
Source record: 170143

I have recently decided to part with the following scanners. My collection has become too big.

Uniden Bearcat 200xlt. Includes factory antenna, and carrying case. Has mods for FULL 800mhz, and light to come on when radio recieves. Good condition.

Realistic PRO-34. Includes factory antenna, and service manual. Has mods for FULL 800mhz, and light to come on when radio recieves. Good condition.

Realistic PRO-37. Includes factory antenna, and service manual. Has mod for FULL 800mhz, and I can do light mod on request. Very good condition.

Make me a REASONABLE offer on any of the above.

I have decided to sell them as I have recently been lucky enough to come across both a PRO-43, and a PRO-2006. :) I also recently purchased a PRO-26 on clearance, and am quite happy with it.

nrf,

I have been searching for information on the use of MDT software and hardware to monitor MDT messages. The units in use here are Motorola 9100 and was curious if you had successfully monitored these model MDTs before?

Furthermore, would it be an outrageous price to pay someone $45 for the Schmitt trigger? I read that "if I were building this circuit I would strongly suggest tying the
non-inverting (+) input of the op-amp to ground since you are working directly with the discriminator output and don't need a Schmitt trigger."

What is your take on this?

Thanks.

Charles

"Quality" is a relative term, however in your price range I would considert a used Radio Shack Pro-2030, an excellent performing 80 channel scanner that can be had for less than $100.00. When available many pawn shops will sell these for less than $75.00.

One side benefit if you are so inclined, is that the 2030 can be easily modified for full coverage.

>fairly well as an omni. I would suggest at least giving it a try if you

If the gain part is working well enough to be of much use, then the
nulls will be equivalently deep. You can't get "gain" without losing
something in return. That's just basic antenna theory.

>So what do you think Glen? Might be worth a try.

If that's what you want to do, go for it. It doesn't fit my style of
listening. I'd rather put the money and effort into a better omni and
feedline, or perhaps experiment with a multiband antenna, or multiple
tuned antennas with some sort of switching arrangement. Come to think
of it, why couldn't it be theoretically possible to have several
antennas and a solid state switcher that switched antennas
automatically depending on what band you were scanning? Is there a
money-making opportunity here for some innovator?

Surely you know Petey Boe? TVINE@TELEPORT.COM ? If
you recall....or even check, you'll see that the ONLY
thing he does here on the newsgroup is hassle the hell
out of people.

He *never* posts about scanners and scanning. Not ever.
The sleaze crawls out of the woodwork to *start* his
brand of shit.

Don't take my word for it. Check the article base.
See for yourself. The guy is a scuz of the lowest
degree.....possibly on a par with Mackey to see who
can stoop the lowest.

And I am being conservative in saying that.....

> money-making opportunity here for some innovator?

Apparently not. I proposed it and laid the groundwork for
using a scanner's bandpass filter switch mux for that
very same concept..... and that was in 1989. I resurrected
the notion a number of times since and even published a diode
antenna switcher.....but it generated no interest at all.

I thought it was a good idea.

Guess not.

Did you forget to resolder the internal antenna
wire that goes from the BNC center lug up through
the upper board? Check it at both ends, at the
board and down on the connector.

> I need info on what the best bearcat scanner available under
> $300.00 is for taking to races.

For just racing, you can get by with a minimal investment in a Uniden SportCat SC150 which goes for about $160 these days. It will also serve as a good intro radio for day-to-day scanning if the itch ever strikes.

For a little more money you might want to check out the RELM HS200. A wonderful radio for about $225.

For around $250, you can get the latest Uniden TrunkTracker BC235XLT which will give you even better performance and more features.

Of course if you are going to the races, you'll want to invest in a good headset as well. Good luck!

> guidelines - would appreciate it - thanks

Don't think you'll find anything on the web as far as a manual so
here goes...

Your BC100XLT has the capacity to store 100 frequencies. Each
frequency is stored in a channel. There also happens to be
10 banks on your scanner. Each bank consists of 10 channels
which helps you to logically group your frequencies. 10 banks
of 10 channels each gives you the 100 channel(frequency)
capacity.

Scanning refers to the act of checking the frequencies programmed
into the channels for transmissions. If a transmission is detected,
the scan pauses to let you listen to it then resumes when the
transmissions ceases. This is how you listen to agencies whose
frequencies you know.

Searching refers to the act of incrementing a frequency within
a defined range, checking for active transmissions each time
the frequency is incremented. This is how you look for new
frequencies of which you are unaware.

The BC100XLT has three basic modes, SCAN, SCAN HOLD and SEARCH.

SCAN
Press the SCAN button and the active banks are scanned for
activity. Each number key on the keypad corresponds to one
of the banks. Pressing a number will toggle a bank between
active and inactive. While doing so, this will be indicated
by the bar at the top of the display under the respective
numeral.

SCAN HOLD
Press the MAN/MANUAL button to hold the scanning operation.
In this mode you can listen to just one of the channels
which is currently displayed, move around to view other
channel frequencies, or program new frequencies. Be advised
that in this mode, you can only view those channels whose
banks were active while scanning(I think).

To go to the next channel, simply press the MAN/MANUAL key repeatedly. To "jump" to any channel, simply key in the channel number and press MAN/MANUAL.

To program a frequency into a channel, first go to that channel, then key in the frequency value followed by the E or ENTER key.

After you've programmed a frequency, it will be tested for activity once you start a SCAN. If, for some reason, you decide you don't want to check this frequency, it can be locked out. This means it is not included as part of the normal SCAN operation. To do this, simply go to the desired channel and then press the LOCKOUT or L/OUT or L/O key(don't remember which nomenclature the BC100XLT uses).

SEARCH
In this mode, you specify a lower and upper frequency limit and the scanner searches in between them for active transmissions.

First, be sure you are in SCAN HOLD mode. Then key in the lower frequency limit followed by the LIM or LIMIT key. Then key in the upper frequency limit followed by the LIM or LIMIT key. Now press SEARCH or SRCH and the hunt begins. If a transmission is detected, the radio stops to let you listen. The SEARCH will resume when the transmission stops or you tell it to go on by pressing SEARCH/SRCH.

While searching, you can get it to pause by pressing the HOLD key. I think you can then step around by pressing the up and down arrow keys. To resume the search just press SEARCH/SRCH.

These are the basics and should get you going. If you have web access, you might want to stop by my home page below, follow the link for radio monitoring and poke around. Good luck!

5384. FS: Uniden BC3000XLT handheld scanner

Newsgroup: rec.radio.scanner
Date: 1998-02-17 00:00:00 UTC
From: bodoh@dakota.net
Message-ID: <6cc0j1$7bu$1@server2.dakota.net>
Source record: 170168
Cross-posted to: rec.radio.swap,rec.radio.scanner

For sale: Uniden BC3000XLT handheld scanner (current Uniden top-end model);

Coverage 25 Mhz to 1.3 Ghz (minus cellular and 550-760)
400 channels in 20 banks
300 ch/sec search, 100 ch/sec scan
10 priority channels
automatic search and store
selectable (AM/FM/WFM) modes (receives TV and FM broadcast audio)
selectable attenuator
data skip (skips over data channels)
WX key
typical features such as lockout, battery saver, selectable search steps
built in nicad
triple conversion

This radio is in 'mint - like new' condition, with; box, manual, duck, AC adapter - even packing materials! Also included is the optional leather case. Note that for those hung up on cellular reception,it reportedly receives cellular images clearly from 1005 to 1030 Mhz. This radio is one of the best at rejecting overload and intermod. The 20 banks, search store feature, TV and FM broadcast reception and leather case make it ideal for travel.

My price is $295, paid in advance by postal money order, I pay your choice of UPS or USPS shipping. No trades. Lower 48 USA only. Please Email with questions...

Tom, N0YGT

Sorry, the url re-direct server had a problem.

I realize GeoCities is slow, and has those bloody annoying pop-up ads, but it's FREE, like MDTW1234... I guess if they are nice enough to host the the site then I can put up with their quirks. At least you can minimize the first pop-up ad, and never see them again. Although, working on the site during high-activity periods is a real pain... "drunk slug" doesn't even begin to describe the frustration.

If I get around to finding an alternate server that I like, I'll move the site and change the re-direct url to reflect the new location.

Happy monitoring.

That's not completely true with the AOR8000. It is equipped with a lousy antenna. He should invest in something else...like the 15-inch Diamond.

The biggest problem may be that he has bought a scanner that is too advanced for a beginner and he doesn't know how to program and operate it properly.

Whoa, hold on, there!

I read your original post, as well as all the responses. Everyone who answered you was trying to help you. It's impossible for someone to know you meant "453" when you typed "435." The scenario you described, complete with the 435.450 you originally typed, was completely plausible -- scanners DO pick up images of transmissions, just like all the answers discussed.

No one even KNEW it was a typo, and therefore no one was trying to make fun of you, as you seem to imply.

Aye, there's the rub. Even if this is a legitimate business, which it may be
(though anyone with a domain name of "trust-me" is suspect in my book),
there is the little matter that this will be a grey market radio with no US
warranty, and the shipping and duties will eat up any savings.

Not being lucky enough to own anything as new as a '94' I can't help you with the mounting. I CAN tell you however that running TWO scanners on one antenna is a bad idea, at least without some other stuff.

When you split (or Y) the downlead you automatically cut the input signal to each scanner in HALF (3 db down). It is pretty obvious why this is not desirable! The way around this is to use a pre-amp (I can sense the beating coming my way) which amplifies the signal-so the drop doesnt matter as much.

The BETTER question would be why you want to do this? Not enough channels? Buy a larger capacity scanner. Are you trying to monitor more than 1 freq. at a time? Get yourself a handheld and carry it with you.

Hope this helps! :)

Am I correct in assuming that this type of setup would only be useful
in receiving extraterrestrial signals like satallites, pulsars, little
green men and such? The directional nature of a dish makes it difficult
to scan for radio sources because you not only have to have a good idea
of when and what to look for, but also where in the sky to look for it.

Should you be lucky enough to find a interesting radio source, say a
KH-11 or such, then be vaywe vaywe quiet about your discovery. Your
local MIB's may not be very friendly fellows. <G>

Considering that the extra parts should cost less than $5.00, $45.00 does sounds kinda high to me, but he who has the knowledge....well you know the rest. If the output from the discriminator is a decent enough of a square wave, you shouldn't need the extra circuit. Check the signal out on a scope and it should be easy to see if you need it or not.

BTW: If you don't have a scope, Radio Shack is discontinuing their handheld 5MHZ ProbScope. At $50 it's not a bad deal if you can still find one in stock, and it's good enough to work with these signals.

Maybe you should follow your own advice.

As for me, I've never bothered to hook up a scanner to a TV antenna,
since the directionality of the beam defeats the whole idea of easy,
omnidirectional scanning.

5405. F.S or TRADE TRC-465 cb radio

Newsgroup: rec.radio.scanner
Date: 1998-02-17 00:00:00 UTC
From: chevy69ss@aol.com
Message-ID: <19980217011800.UAA29773@ladder02.news.aol.com>
Source record: 170234

will trade a TRC-465 CB Radio (40 ch. LSB, USB, AM & PEAKED) for a
Pro-43(modifable), Pro-26(modifable),AOR1000xlt or any scanner that goes from
25MHz- 1.3GHz with NO Gaps

the Price for the Rig is 175.00 + shipping (C.O.D= $10.00)

need to get rid of CB becuase i Bleeding in to my nighbor Phones a lot
& on my Parents TV...Parents are forcing me to get rid of it :(
need to Sell or TRADE fast..... the rig is in good condition on a 1- 10 scale
it a 9.0
its a Mobile but i used it as a base.... the radio has been Modified for louder
Audio and it does about 6 watts out-put.....

thanx
Chevy

There are only about 5 frequencies used by stores.

154.600 154.570 154.625 151.955 151.625

If they are VHF, UHF is another story

True enough, and I think for the hobbyist, it may well
be good enough. For us purists and professionals,
nothing is good enough until we have independent
verification or some kind of corroborating support.

I'd hate to put into service a 12 MHz calibration standard
until I had some kind of an idea if it were "on". But then
if I found a cesium beam oscillator, I could trust it,
I suppose........

:-)

Cool. And in most cases, that kind of a TCXO will live
up to expectations. You sure don't find them in any
other scanners besides the PRO-2004/5/6 and 2035/2042.
Those five scanners are all of which I am aware that use
high quality TCXO's for Master Reference Oscillators.

Most scanners and shortwave radios just rely on the
CPU system clock and other basic crystal oscillators.

Joe,

You'll need the manual if you want to set the baud rate via internal
jumpers. However from the keyboard it's easy:

1) Turn power OFF.

2) While pushing the following keys, turn power ON.

BAUD RATE KEY

9600 ENT + 5
4800 ENT + 6
1200 ENT + 7
300 ENT + 8

Everyone,

Thanks for the responses! I got quite a few. Turns out the radio I was describing was the Motorola RADIUS SP50. This is obviously a pretty popular handheld for retail/security/etc type markets. I have seen them all over the place. www.mot.com (Motorola) web page is pretty decent and includes pictures and tech specs on all their radios.

The SP50 operates at 150-170mhz in VHF and 450-470mhz in UHF. They are basically 5w rigs.

Thanks.
Keith

I don't think anyone *did* anything, exactly.
The 'corruption' of which you speak comes and
goes in cycles.....just like the ocean tides.

Right now, no one is jumping anyone else's case,
and so long as that status quo remains, then
the ratio of useful posts to worthless is likely
to be higher.

The only constant, however, is c-h-a-n-g-e. So
don't tie your hopes and happiness to the flow
of the newsgroup. There is always something here
of value to someone. Pick your fruit and leave
what you don't want.

Simple.

> PRO-508. any help would be appreciated.

What is a PRO-508? Sounds like it's older than
the hills. In which case, the keypad is probably
wearing out and there is no "fix".

It could be that the "contacts" are still dirty
and that you didn't clean them wekk enough. Use
a cotton-swab and isopropyl, ethyl, or methyl
alcohol with a light touch on the carbon pads.

Use naphtha and a heavier touch on the rubber
pads that connect to the carbon pads. Rubber
oxidizes and any such layers can be removed
with naphtha.

For the most part, I'd guess an old scanner to
be out of luck....

Oh....there could be an electronic problem with
the keypad matrix, too. This requires troubleshooting
and diagnosis, though. And you *need* a service
manual to even get to first base. Try (800) 442-2425.

5416. So Cal Edison, Gas, and GTE

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: Mad Scanner <madscanner@hotmail.com>
Message-ID: <34EB3FA8.F9E@hotmail.com>
Source record: 169993

I have a large list of So Cal Edison, So Cal Gas and GTE frequencies. However, to program all these in and search for those used on a local basis would be murder (not to mention consume my entire scanner). I'm hoping someone out there might already know which Edison, Gas and GTE frequencies are used in the San Gabriel Valley? (Specifically, I'm in the eastern section thereof, but that shouldn't make any difference..?)

Any info would be greatly appreciated. The lists follow for the reference of anyone who'd like to see them...

> probably aren't worth messing with.

You never know. The 10 MHz X-301 I bought was
dead-on right out of the bag. I messed with
the adjustment just to see how touchy it was
and to get a feel for the process of zero-beating.
In other words, it could have just as easily been
put into service without a calibration check.

I can't vouch for all of them, but at $49.88
including shipping, I expected it to pretty
damn close and pretty damn stable. Fortunately,
it easily lived up to my expectations.

Thanks again Bill--you the man!

Can someone help me test my PRO-2006's cordless phone freqs?

The sensitivity seems to have decreased.
TIA

its a desktop 20 channel probably from the early 90's.

> It could be that the "contacts" are still dirty

ok ill clean again but it looked very good when i opened it up, ive seen
worn contacts before and this was noway near worn.

i think this might be it. for some stupid reason i hooked it to a
different AC adapter, i checked the dapter first for the correct voltage
and polarity and it checked out. i hooked it up and turned on the
scanner but the plug from the adapter didnt fit real tight so giggled
it, the scanner went off and the came back on. it was after this
happened it lost its memory and none of the buttons worked except for
the 2.

In the US, only 824-849 and 869-894 are allocated for cellular service. The 902-928 MHz band is used for amateur, cordless phones, and certain low power devices. Around 940MHz, there are repeater outputs for trunked radio systems, similar to those in the 851-869 band. In each city, there are only two cell-phone providers, one of which is part of a phone company. No cell phones are allocated for 900Mhz freqquencies. (this range also isn't blocked

out in US models.)

There is NOTHING WRONG with Javiation. As a matter of fact,
that is where I get my CPUs from. Jonathan is a really nice guy,
it's that other asshole, M.MOORE who thinks he knows it all.
The CPU that I get from Javiation is $60.00 plus $ 20.00 to get it here.
The logic board from RS is $ 169.95 plus $ 10.00 to get it here
I pay shipping plus insurance to get it to whoever buys it, another $ 10.00
PLUS I desolder and solder in that 100 pin surface mount micro-processor
that is
the size of your fingernail.
So I make $ 30.00 lousy stinking bucks for ALL my effort to help
make this controversial hobby more fun.
I have sold QUITE a few to REAL SCANNING ENTHUSIASTS
who really enjoy getting the most out of their radios,
not that idiot who has a 20 channel,30 to 512 mhz, dual conversion
POS(Piece Of Shit) Johnny Channel Banger off the wall no name scanner.
This guy should BUY A REAL SCANNER or GET A BETTER JOB, stop
flipp'in hamburgers if he wants to play with the Big Boys or better
yet, KEEP HIS BIG MOUTH SHUT
I am sick and tired of all the " Thats too much money" or " Are you crazy "
posts. If you think is too much money, turn the page and go on with
your stinking life and leave the people who make the hobby more
fun ALONE.
BOY THAT FEELS SOOOOOOO MUCH BETTER GETTING THAT
OFF MY CHEST.........
That all,
See Ya !!

Source record: 170003

The Sportcat is an excellent entry-level hand-held scanner. It was my first, and it was easy to use. Because I had such good experiences with that unit, I started looking for a radio with more memories, more modes of operation, and more frequencies. I found what I was looking for in a Yupi, so I sold my Sportcat and bought the Yupi. I outgrew the Sportcat because it was such a good entry-level radio. Had I found it to be a dud or hard to use, I might still have it. Ironic, isn't it?

Bill

I run Probe (DOS based) through Win95 and it runs faster than what it can through DOS alone. Maybe one should shell out $100-150 for a 386 computer complete with monitor and have everything you need. You can also multitask with DOS. I forget what/where the OS was in which to do it, but I used to use it some before switching to Win95.

Note many folks just don't have a license and will buy anything that talks on the same freq with something else, like buying two radio shack portables to go, legal or not! Most stores only sell the low watt stuff that needs no license for the public to start using right away of the shelf. I even found people using the marine radios to talk to each other even though it is quite illegal, these radios are fairly cheap have five watts and lots of channels to be sneaking with. Oh lets not forget the ever wonderful hand held CB radios, they not too popular because of range and noise thank god.

Hi,

Thanks for reading.

I am in need of repair type data for a Regency MX 3000 scanner.
If you have it, let me know. May not need it printed out (yet!), but do
need some up front info to start with.

If you can help out, please let me know.

Thanks......

Lou

I would like to know what the difference might be between a BC235xlt and

the Helm HS200. Is it worth it to get the "audio modified" option when
purchasing a scanner. I will be using the scanner at the races.....

thanks,
Dan

5436. Notch Out Trash!

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: "news.toad.net" <dat2comm@toad.net>
Message-ID: <01bd3cc5$85dfc320$311e31d1@wendy-s-avon>
Source record: 170013

A wile ago, someone posted that he was getting "trash" on his scanner from cellular and other ant. sites. I responded stating to use a notch filter.

At the time, I did not have handy the info one them. I have some now, and have requested a catolog from the vendor.

The brand is Eagle. The prices start in the low $100.00s, but I guess if you are really into your scanner, and need to get rid of the trash, they are worth it.

For more specific info, E-Mail me, and when the catolog arrives, I will give you your answere etc.

Could you give me the web sites or addresses of some other overseas companies
offering European CPU's or logic boards? Thanks in advance.

> I make a lousy stink'in $ 30.00 bucks for it and it is guaranteed...

This would be similar to my Dentist filling a cavity for 50 cents.
$30 is cheap for the special tools and experience required.

Well I went back inside and resoldered the connections but nothing
worked - so - I resoldered the D4 diode and that took care of it! What a
TINY diode!

Thanks for your reply!

5441. REALISTIC 2032 PROBLEM!

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: PirateBox@webtv.net
Message-ID: <6cga78$27v$1@newsd-113.bryant.webtv.net>
Source record: 170018

I have a 2032. I have cellular mod. The problem
is that most scanners in the 851mhz range
recieve buisness and police. Mine on the other hand has always recieved
cell rarely a buisness.
Even before the mod it did this. I wonder
why this happens? Is it ghosting? I recieve cell
in the 870s through the 890s they are all different.
Whats going on here? What happened to the
850 range? I borrowed a friends BC890 and
his gets the buisness and police on the 850
range. I dont get it. His recieves cell on the890
range.
IS my radio goofed or is there a solution?
PLEASE POST OR E~MAIL!!
THANK YOU!!!

5442. For Sale - AOR 8000 / Optoelectronics Scout / Optolinx

5444. California Frequencies - mhz.zip (0/1)

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: ejo@wavenet.com
Message-ID: <6cdake$5dg@news.millennianet.com>
Source record: 170038

Let's see if I can actually get this thing to post! Attached is (hopefully) the entire responce the the gentleman who wanted the LA area frequencies. Instead I am posting a zip file for most of California. As stated before, I got this from somewhere, and can't remember where.

Enjoy

On Tue, 17 Feb 1998 00:01:04 GMT, krubsack@sprintmail.com (Mark Krubsack) wrote:

>If I wanted to hear an unwanted "blocked" 800 MHz freq on a Pro-2037 (triple >conv) where should I look?

The Pro-2037's first IF is 257.5 Mhz.....a signal at say 880 Mhz would be received as an image if the receiver is tuned to 880-(257.5*2)=365 Mhz. Unfortunately the Pro-2037 doesn't tune below 380 Mhz so the lowest C-band signal it would accept as an image would be at 905 Mhz (380+2x257.5). In fact, the filtering in this radio isn't that great and you can get images of signals in the 410-420 band up around 935+.

The first IF stage passes an image signal as a signal modulated at the same frequency as the desired signal. The 2nd IF can't tell the image from the real signal and passes both on through the receiver. So technically speaking it isn't accurate to say that a triple-conversion scanner doesn't have images. What is true is that a triple-conversion scanner gives the designer more flexibility to place the images where they (normally) don't matter...and by using a much higher 1st IF frequency, the image and the desired signal are further apart.

In a dual-conversion radio, the image frequency is usually only about 21 Mhz away from the desired signal. At VHF/UHF it's hard to design a filter that will suppress one signal but not the other unless they are further apart than that.

From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <01bd23c2$48ad81c0$0e544bce@default>
Source record: 170044

Hi everyone,

Name is Kevin Fisher. I recently posted my updated copy of the Edacs source code. It has been brought to my attention that some people are having trouble getting it to run.

It should be noted that the slicer should be on Com 2 and the radio (Pro 2006 / Optoscan 456 etc) should be on Com 1.

If they are mixed the program will start but will hang .... it will start but the 'spinner' will not spin. This is because it is not receiving data. Just switch your com port connections.

Sorry if this wasn't clear.

I am also going to build a working exe file for people without compilers in the near future.

Thanks for all the feedback and encouragement. It goes a long way to keep things rolling along towards a great application.

LISTEN MIKE,
The CPU cost me $ 60.00 plus $ 20.00 to get it here.
The logic board from RS was $ 169.95 plus $ 10.00 to get it here.
I pay postage and insurance to whoever buys is another $ 10.00
I make a lousy stink'in $ 30.00 bucks for it and it is guaranteed in the
USA and no worry about customs.
Before you go and flame my posts I would appreciate you getting ALL the
figures WHY it is $ 300.00 and what the stock is at Jav.

5453. IC-PCR1000 and Discone Antenna

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: John Smith <jtsmith@mindspring.com>
Message-ID: <6cdsmd$jbq@camel12.mindspring.com>
Source record: 170047

I have attached my old radio shack $59.95 dollar discone antenna
to the ICOM PCR1000 and it is a perfect mate for the radio. Not
only does it work on the UHF-VHF bands, but it greatly enhanced the
HF band reception. The antenna's low gain on the lower HF freqs .01-30
MHz reduced the intermod effects and made a good radio great on
these lower bands.

See my comments at my web page at www.mindspring.com/~jtsmith

Have fun....

de Dave, NF2G

I have seen this excuse with almost .....non programmers.

More to the point, when is windows going to be written as a Real operating
system?
Windows can't do any real or near real time operations. If you wanted to
attach an external processor to perform bit operations then maybe windows could
handle it.

Until then, well have to use DOS for anything fast.

No kidding, man. It's impressive. You can use it in lieu
of WWV at 10 MHz anytime you want with a high degree of
assurance and confidence that it's within a few hertz of
WWV. It will beat the snot out of the time base in any
hobby grade frequency counter, and most mid-range pro
counters as well.

>
> Thanks again for your time.

Ohhh, I see now. Okay, I misunderstood you. Yeah, there
is nothing in the PRO-2022 that comes close....Just the
PRO-2004/5/6 series. Oddly, even though the PRO-2035/2042
are of the same family and "DNA" as the PRO-2004/5/6, they
use a different X-301 that runs at 12 MHz, so that would
be harder to calibrate since there are no common 12 MHz
standards like WWV at 10 MHz.

The 12 MHz X-301's are the same type as those in the
PRO-2004/5/6 and are every bit as stable, but I just

don't know of any common 12 MHz standards....so those
probably aren't worth messing with.

The Uniden SportCat (SC-150) just isn't a very good
scanner. It's more of a yuppie scanner; lots of
sizzle and very little steak. Uniden must be
realizing the folly.

Are you kidding me ? Code the damn thing in assembler. That's what
I would do (and have done) for embedded applications (ie. the bios

code). Assembler is as close as you get to the silicon. Unfortunately
it's also processor specific. I wouldn't even waste my time coding
it (for what ? to give it away for free, and have some lamer bitch
and complain about how it doesn't have the right font ? It's not worth
it).

If someone does it, they should market it for a reasonable profit
to cover their time and coding efforts. Which is what Gates did, and
we know the market was there. Now, considering how many people are bitching
about the MDT program, the developers should take a hint, and introduce
a more "polished" commercial for profit version.

This group has shown the market for it exists.

The principles used in speaker phones work well. Use amplitude peak detection with some filtering of your "Voice Source" to create the envelope or a DC signal. Then use a comparator between the Received Signal Strength Indicator, RSSI or Rx meter voltage to produce an output that enables the transmitter. So if you will trasnmit when your voice level overcomes the voltage detected by a received carrier. The trick with speaker phones is that they cancel feedback between speaker and microphone by balanced feedforward and a fixed position between the two. Otherwise you may need to use headphones.

There's not much to it when the design is right. (I once designed one in the late 70's for a VOX using a "throat microphone" in high ambient noise.)

Source record: 170057

I have a couple of Motorola handi talkies. I bought them used and they
didn't have any color dots. One is an HT600 and the other is an HT1000,
the 600 has 2 channels and the 1000 has several (8 or 10?) channels in the
UHF range, ~462mhz.
I believe you can distinguish VHF from UHF by their antenna. My UHF radios
have a very short stub antenna of about 4 inches. The VHF (152mhz) radios
have longer rubber duckies I believe..

Anyone know where to mail order NiCd packs for these?

You should lock-out any 0 frequency channels in any bank you're scanning.
You're wasting your scanner's time if you don't.

Take it easy,

.....
....

I have looked at the output of several scanners discriminators, and can almost
guarantee you that the signal has very little resemblance to a square wave!

Watching the input and output of the "data slicer" cicuit simultaneously,
you'll be amazed at what the circuit will "see" as a 0 or 1. I really doubt
any of the software, based upon the interrupt timings on a serial port (UART)
would be able to make any sense of it at all.

Since mid-1995....Windows 95 has been a "real" operating system.
Windows NT has been "real" since about 1992.

> Windows can't do any real or near real time operations.

You have got to be kidding? Do you really believe that?

> If you wanted to attach an external processor to perform
> bit operations then maybe windows could handle it.
>
> Until then, well have to use DOS for anything fast.

Sounds like a load of FUD from someone who hasn't a clue.
Who told you all that stuff, anyway? Looks like they
had a nice little joke at your expense.

You need to understand a little something about
multitasking and multithreading to get a grip that
there are tradeoffs when running a number of apps
at one time. Less informed people mistakenly think
that a single-tasking operating system is faster.

It may well be. But fast isn't important. The coding
is important. Any rank amateur can sit down and bang
out some code for MS-DOS and expect it to work to some
extent. Not so easy with Windows or any other multi-
tasker.

Radio applications are NOT inherently cumbersome and
loading on the computer. It's just the way they're
written that makes that so. Take a digital data signal
of 9600-bps fer instance. Each bit occupies a time
window of 105-uSec. If the serial port's FIFO buffers
were properly coded into the application, there is no
reason why the "decoder app" should put any more of a
load on the CPU than about maybe 6% to 10%.

If the amateur programmer doesn't know a FIFO from
a fido, then he won't use the buffers and an INT
scheme, and therefore his kludge will suck up 100%
of the CPU and system resources.

To date, that's pretty much what the radio hobby scene
has been handed.....just a bunch of kludgy applications,
or in some cases, darned good DOS applications from die-
hard DOS programmers who won't elevate themselves.

In a word, there is no inherent reason why the Windows
operating systems can't run anything and everything that
radio can throw at it.....so long as it conforms to the
more structured and organized Windows API.

IMHO.

5480. Baud setting R7100

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: gregg@plains.nodak.edu
Message-ID: <6ceufnqbs1@node2.nodak.edu>
Source record: 170074

I just got a used Icom R7100 but didn't get the manual. I have one ordered from Icom, but in the mean time, I want to use scanner control software with it. I have the CT17 interface and I can communicate with the 7100, but only at 1200 Baud. Scanning rate is S-L-O-W at this pokey rate, like one channel per second, while the native speed is more like 20 or 30 cps. Is there a way to increase the comm rate to 9600 bps or more? Is there a way to speed up the scan rate while computer controlled? I have ScanCat Gold (dos) and have been trying ScanCat Gold SE for windows demo (should have the registered version by the end of the week). Any suggestions?

5487. Kenwood TMV-7A Mod Problem

Newsgroup: rec.radio.scanner
Date: 1998-02-18 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cf9u6$6qf@bgtnsc02.worldnet.att.net>
Source record: 170081

I performed the mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

Joe:

I used to have a R7100. The baud rate can be set to 9600. A friend of mine set his by changing some soldered jumpers inside the radio. I set mine via some key pad sequence, outlined in the manual. Unfortunately, neither one of us still has the rig, or the manual, so I can't tell you how to do it, only that it can be done, and preferably via the key pad.

Good luck,
Bill Crocker

Joe Gregg wrote in message <6ceufnqbs1@node2.nodak.edu>...

I have the following for sale or trade (see trade list below) :

Secret Leg Wallet (pretty nice, I intended using it for safety purposes on
my trip to Rio, but I had escorts so it was entirely inconvenie
nt- I never used it so it is essentially brand new)
Uniden PRO-51 200 Channel handheld scanner with unblocked frequencies that
theoretically are not supposed to be there.... Not too
mention the following : leather carrying case, two
antennas, and rechargeables.. A nice one
and two adult videos - 1. Tracy, I love You
2. College Girls

Prince Tennis racket - Nice, with cover.. (I dont even play tennis :)

Watches - Two Rolex replica (geneva) watches- beautiful pieces for those
times style is important.... One is the El Presidente replica with
simulated diamonds, and the other is a Submariner replica with a
extravagant blue face...

Make an offer on any item or the lot..

Will trade items for the following:
Nice cigar humidor
Quality cigars
Code scanner/grabber
Radar detector

Thank you

Hi Michael. Keep looking. I downloaded a FCC data base for my state with a program to search it with. But I don't remeber where I got it. It was a FCC data base at no cost.
You could down load it by state. The software I down loaded allowed you to search by county, frequency, city, antenna location, licencee etc. It is DOS software.
Bob W7CTW

A good TT? There's only 2 available and they're made by Uniden. The BC235XLT (handheld) and the BC895XLT (base unit). Rat-Shack sells "their TT" at a higher price but they're made by Uniden too.

They work very well but only with Motorola systems.

>Trying to start a little forum where you can be
>GOD & treat people like SHIT as you did in
>Fidonet's "SCANRADIO"?

It doesn't surprise anyone that you would be among the first to snipe at Bill's wanting to set up a mailing list. I imagine that he wants to keep trash out of the discussion and focus on the subject of scanning.

When are you going to stop crying about getting kicked off of Scanradio. Give it up--no one but you even cares.

In thousands of posts here, you can count on the one hand of a retired bomb squad member, the number of posts that you have made on scanners and scanning.

Of course, as is your usual MO, you whine and complain but offer nothing positive in return. Anyone can set up a mailing list. If it bothers you so much, why not set up one of your own? No, that would actually require you do something other than snipe, lie, whine, bluster, skulk, slander, and engage in general infantile behavior for which you are so famous.

I'm willing to bet that any place where you are not is a better place.

When listening to the LAPD many times after giving out a person's info (Driver's license number, license plates, date of birth, etc.) they'll say "KMA". What does KMA mean? If anyone knows, let me know. Thanks.

5536. Best freq. database: PerCon's Spectrum?

Newsgroup: rec.radio.scanner
Date: 1998-02-19 00:00:00 UTC
From: calanan@fstrf.org.com
Message-ID: <34ec8e3b.12057505@news.magma.ca>
Source record: 169966

I'm tired of searching the web for frequencies, and want to have a full database at my fingertips. I'd like to know what you use (for a DOS-based machine) and what you think of it. I'm interested in the PerCon Spectrum database, but want to know if there's something as comprehensive cheaper or free? Does the FCC provide FREE access to their complete database? If so, are there freeware/shareware programs to search/manage them?

I like the idea behind PerCon's software, but if I have to pay $29.95 every quarter to get an update I think I'll pass and revert to searching the web or begging in r.r.scanner. :)

Thanks for any input!

>and what you think of it. I'm interested in the PerCon Spectrum database, but want to know if there's something as comprehensive cheaper or free?

The Percon is probably the least expensive around. The biggest problem that I've found is that the database contains many misspellings and some stuff that is plain incorrect. I guess they just grab the FCC data and stick it on a CD because it is apparent that they haven't made much, if at all, effort to clean it up. The database manager is pretty woeful too. Most people will tell you to dump the freqs into Access, FileMaker Pro or some other RDBMS. Still it is among the best of a very sorry bunch of products, from what I can see.

As a for free, you should definitely check Scanware Associates' web site. They have a free program and freq data for most (maybe all) states:
http://www.oz.net/~gmcavoy/sw_frqsmap.html

However, I haven't checked in a while, so I can't tell you how up to date it is.

Don't know for sure but I think it goes back to the days when the ONLY
callsign LAPD had was something like KMA367. KMA was shorthand for the
mobile. Guess it has persisted to this day.

Anyone else out there have better details?

PS

Looked up the callsign on my Percon regional disk.

KMA367 is indeed licensed to the City of Los Angeles.

Frequencies listed are

39.060 MHz Mobiles
45.740 MHz Mobiles
154.770 MHz Mobiles
154.830 MHz Mobiles
155.010 MHz Mobiles
155.070 MHz Mobiles
155.370 MHz Mobiles
155.520 MHz Mobiles
155.580 MHz Mobiles

There is NOTHING WRONG with Javiation. As a matter of fact,
that is where I get my CPUs from. Jonathan is a really nice guy,
it's that other asshole, M.MOORE who thinks he knows it all.
The CPU that I get from Javiation is $60.00 plus $ 20.00 to get it here.
The logic board from RS is $ 169.95 plus $ 10.00 to get it here
I pay shipping plus insurance to get it to whoever buys it, another $ 10.00
PLUS I desolder and solder in that 100 pin surface mount micro-processor
that is
the size of your fingernail.
So I make $ 30.00 lousy stinking bucks for ALL my effort to help
make this controversial hobby more fun.
I have sold QUITE a few to REAL SCANNING ENTHUSIASTS
who really enjoy getting the most out of their radios,
not that idiot who has a 20 channel,30 to 512 mhz, dual conversion
POS(Piece Of Shit) Johnny Channel Banger off the wall no name scanner.
This guy should BUY A REAL SCANNER or GET A BETTER JOB, stop
flipp'in hamburgers if he wants to play with the Big Boys or better
yet, KEEP HIS BIG MOUTH SHUT
I am sick and tired of all the " Thats too much money" or " Are you crazy "
posts. If you think is too much money, turn the page and go on with
your stinking life and leave the people who make the hobby more
fun ALONE.
BOY THAT FEELS SOOOOOOO MUCH BETTER GETTING THAT
OFF MY CHEST.........
That all,
See Ya !!

5545. Louisville, KY police could be going trunked

Newsgroup: rec.radio.scanner
Date: 1998-02-19 00:00:00 UTC
From: Michael Harpe <mike@mharpe.win.net>
Message-ID: <34ECBC68.6A16@mharpe.win.net>
Source record: 169975

As part of an ongoing discussion of consolidating the Louisville and Jefferson County, KY police departments, the subject of radio systems has come up in a big way. LPD and JCPD use totally different systems, LPD is UHF around 460 MHz, JCPD is VHF on 154 MHz. I have heard quotes of between $15 and $50 MILLION for a new system. This high cost is one of the biggest, in fact the biggest, obstacle to the merger.

LPD has the better system. They have been upgrading their system steadily and they maintain it pretty well. JCPD has noticable AC hum in it's signal. I also understand that it's prone to failures and not compatible with most new technology.

I can only assume that the really high priced systems are trunked 900 MHz systems. I do know from conversations with people in the departments that trunked 900 MHz is not really popular. The media here are watching this carefully because they rely heavily on scanners to cover stories. I would expect some yelling if a system that cannot be monitored is installed.

The cost may cause them to just expand the 460 MHz system to include the county. I really don't think the money is there for an all new system. Kentucky just doesn't have that kind of money. Stay tuned.

I have been having trouble with my news server lately and haven't been
able to respond sooner.

I am sure your efforts are more than worth $30. Who cares! Its the
$300 cost that seems too much for a radio that recently sold new for the
same amount. In any case, Javiation sells the complete logic board with
the European chip for approx. $165 depending on exchange rates. Yes,
they are currently out of stock. According to Jonathon, they have some
more stock on order. In addition, when Jonathon does get more stock, he
also offers a service whereby his firm will install the European chip
into the logic board you send him (the old one now in your scanner is
probably not going to serve any other purpose). This cost approx. $100.

Another option is to get an OS535 board from Optoelectronics from Canada
(try www.durhamradio.ca or www.interlog.com/~ahr). This will give you
computer control as well as unblock the cellular while under computer
control for *LESS* than $300 including shipping.

Bite me.

Message-ID: <34ECCD34.D207E3DF@utoronto.ca>
Source record: 169980

But you do recognize the risk. If things don't turn out the way you expect, you have little or no recourse. I've had the pleasure of investigating an "internet fraud" recently -- it goes like this:

The perpetrator found the name and business telephone number of someone at my work (through an online staff directory). In the evenings, this phone line greeted callers with a prerecorded message indicating the name of the phone's owner. Similiarly, the perpetrator found an address of someone with the same last name as the phone's owner through an online telephone directory.

The perpetrator created an email account through a website that offers free email accounts. He then browsed Ebay and other online classifieds. Then he communicated with victims by email offering to sell them the goods they were looking for. He provided them with a name (female), telephone number and address and told victims that they should call in the evenings.

The perpetrator even created phony references included other bogus email accounts and a posting to a good traders list by someone claiming to be a satisfied customer.

It turns out that all transaction details were communicated by email including the instructions to wire the money (Western Union) using an ID challenge question (the perpetrator only needed to answer the question correctly to pickup the money -- no id required). Some of the victims actually called the phone number given and were satisfied when they were greeted with a message identifying the phone's owner. Too bad they never actually talked to the phone's owner.

The perpetrator picked up his money in Vancouver Canada (although the victims thought they were dealing with someone in Toronto Canada -- 2000 miles away). The money trail ended at the Money Mart were the money was picked up, since they did not require ID.

Yes, the IP path may be traced from the bogus email account created by the perpetrator, but the owner of the service who provided the email account would not release the information without a subpoena.

The value of a single transaction averaged around $300 dollars and I know of 6 victims -- there may be more.

Local police in the victims' area were not too interested in pursuing the matter. It simply is not worth it to them as the crime involves at least 2 states (the victim's and the owner of the service providing the email account) and another country (Canada -- the home of the perpetrator) and for small amounts and no violence.

The point of this long boring story is:

Caveat emptor (buyer beware)!

I don't know what you mean by trunk tracker but I have a Uniden Bearcat
I perfect condition I would sell for $150CDN. I bought it used but with
a warranty and there's still a month left on it. Includes car adapter
and AC adapter.

5552. Re: Quality Scanner Under $100

Hi !

I have an AOR 8000 and am overall very happy. But am wondering
if im missing anything. I heared of an "birdy" (sp?) fix and
some other additions that are available.
Could some be so kind and enlighten me in this area ?

Many thanks in advance !

There are many reasons why ericsson and even E.F. Johnson LTR beats rotomola... I mean motorola. The motorola system has a protocol called "fail soft." The local motorola system goes into fail soft once a week or so. When the system goes into fail soft, which is when the computer screws up, all of the users revert to conventonal/non-trunked mode. The users are each assigned a fail soft channel. When the system screws up - they revert to their fail soft channels, many of them share the channels, they can all hear each other, which means the "Privacy Plus" system is not so private. If two wreakers share a fail soft channel, one can steal the other's calls and get there first. It usually takes the local Motorola shop a day or so to diagnose the problem and repair the system. If the central computer screws up really bad or the control channel (which tells the mobile which talk channel to use and preforms other data functions) goes out, the system is completely useless. The motorola system also has a hang time which holds the channel up for a set amount of seconds after you let off the PTT. This may be ok while you are talking, but when the system is busy, like the local system is 75% of the time, it really gets annoying - that hang time keeps you from talking and makes the system less efficent, it is wasted time. Only certain set channels can be control channels or data channels on the motorola system. Ericsson radios can be simply re-programmed when the system is upgraded - but most motorola radios need to be replaced, the Ericsson system won't go obsolete. Ericsson, on the other hand, has a very efficent system. Ericsson offers faster access, greater coverage, and better control over the radio systems. EDACS - Enhanced Digital Access Communication System. Ericsson / GE pioneered and implimented many of the electronic communication systems that we take for granted today: telephones, televisions, FM radios, and cellular phones. Ericsson can run data communications and voice on the same channels and don't require data-only and voice-only channels. Also, one radio is used for voice and data. Wide area, telephone. Trunking allows users to only hear messages intended for them and preventing interference. The Ericsson system will give the user exclusive use of the channel for the duration of the call and users can't key over each other, certain calls may have priority access and they will get the first avilable channel before other users. Ericsson offers "non-stop trunking" - if the central control computer equipment - or site controller - gets completely destroyed, the independent repeaters and channels have the brains to keep the system in operation and trunking. It has self-diagnostic software and a fault-tolerant aricitecture. This prevents the user from having to purchess expensive back-up computers. When the motorola system is needed most, durring a disaster of some kind, most likely it is in fail soft and reverts to conventonal mode which trunking is supposed to correct. Any failure in an EDACS only breaks part of the system and the rest keeps working. The end used would never notice a failure.

Only the communications staff knows of the failure. Not many people know that an EDACS system can go to conventonal mode in a catastropic failure but in the system's 10 year existance no one has ever relied on this function. No system uses radio channels more efficiently than EDACS. Another fact which is good for the user is that EDACS is less easy to follow a converastion on. I know we all like listening to radio communications, but if you were the user would you want other people listening to your conversations. EDACS will run analog voice, data, digital voice, encripted voice for high security, and telephone calls all in one system. Users can also signal for distress with a push of a button. E.F. Johnson's LTR or Logic Trunked Radio is a less expensive but a highly efficent and reliable system. It can have up to 20 channels and does not have a control channel. All data to the radios is transmitted subaudibly while the user is talking. The repeater sends a data burst every ten seconds which tells the radio that it is online and usually operates the out-of-range indicatior. The radio has a home channel and goes to that channel first. When the radio trys to access the system, it sends burst of data to the home repeater, the repeater then either grants or denies the mobile access. All conversations start on the home channel and if the home channel is busy with a conversation, the data assigns the mobile another channel at random. The LTR system offers phone and multiple towers can be linked together. The LTR system never reverts to conventonal mode. If the system is busy the radio will give you a busy signal and beep when a channel is avilable. LTR is a very simple system and it works very well. There are many different brands of radios that work on LTR, but only radios made by the system manufacturer and several exceptions work on other systems.

Now that you have seen some of the facts, please look into other brands and types of communication equipment instead of instantly saying that motorola is best - because it isn't!

Source record: 170023

I bought a PCR-1000 a month or so ago and to the best of my knowledge there is no such singular (voltage level) output port for the signal strength.

You would need to write software to inquire through the RS232 interface to control the frequency and read the signal strength.

This is quite feasible, except for the fact that Icom has been unrelenting in their fixation on treating the control protocol for this radio as a trade secret or something. To be fair, they have rumored that they would release the protocols to a few selected commercial software vendors. But they have refused to make this information available to their loyal customer base. Its a sore point with me as you might can guess...

I write software for a living and have come to really resent not being provided with documentation to allow me to do what I wish with the radio I purchased. I can see no value in Icom's position whatsoever, yet they are intractible at this point. For that reason alone, I'd be reluctant to promote the purchase of one of these radios. I know for a fact that many others on this and other internet forums share this view.

ICOM... ARE YOU LISTENING?

John McDermon, KE4VAL

sorry, used my wrong email address before.

hello,
I was wondering if anyone has the uniden exp901 cordless telephone and ifs its any good. I can buy a factory serviced one for $79.00. Does does sound like a good deal? Thanks.

Sorry, the mod I'm talking about is the extended receive and transmit
mod.

5568. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.scanner
Date: 1998-02-19 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cgo36$36a@bgtnsc03.worldnet.att.net>
Source record: 170031

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

I don't mean to goose your moose but check out the
following two examples of cancels.....and OH YES
you can cancel your own posts. That is a fundamental
tenet of the Usenet. But here is an example of
the cancellations done by someone else:

Below are just two of hundreds of these cancels.
Read it and weep. Condolences to your moose.

Have you checked with Nextel? It's a digital cellular telephonethat can
be used as a two way radio (free...except for your normal
monthly charge) and a alphanumeric paging receiver. Mine is
$47.00 a month - I got rid of my pager and my walkie-talkie
and just use the nextel phone. Works great and you only
have one thing to lug around.

try www.nextel.com for more info.

sometimes, and this will probly be one of them. I wish to hell I didn't
try to be so helpful. All this windoz / dos crap seems to have started
when I replied to a post of some one wanting to know where to find the
latest version of MDT. Well (and here goes)I took my time to look up the
latest version (the one called MDTW1234) and compiled it with my old
ripped off copy of turbo c by boreland.. Then I put it into a
subdirectory on one of my websites. I posted the where abouts to this
NG with a FRIENDLY warning to anyone attempting to run it. that it
ran in dos and would not run in a win95 dos window. This it does. I
didn't write the C program just compiled it. I would not waste my time
writing a program to copy MDT transmissions. Because there are so many
different kinds being used by diferent agencies and companies. Only

one police dept in my area uses the type of baud rate (4800) and
bit configuration used in the program MDT....and that's is PASADENA, TX
on a limited basis. Anyone wanting to evesdrop on MDT transmissions
should rip off one out of a police car and make it work for their
purpose. Goddam it's a piss poor program from the get go. Just something
to fuck around with.
joe d (Bill, it was just a joke)

Yours is the first response I've seen. If there
were others, perhaps they got canceled.

> I wouldn't argue with almost any anything you've said
> about hardware, but I've my specialty IS software.

Fifo buffers on a serial port are.... ummm... hardware.
If you can't take advantage of them via software, I
don't know what to say.

> Things like Modems are doing all of the real work externally to the CPU.

> serial port please.

I don't "do" software. No one can do everything.

> You may consider Windows an operating system,

The ratio of people who do to those who don't is 1000 : 1.

>but for my purposes, it is not.

You didn't say that before, though. You just slurred Windows
without any qualifiers. But if you don't consider Windows
an operating system, then have you considered how MS-DOS
is dying a painful and slow death? Who is making a living
from DOS anymore? Fewer and fewer, that's for sure. No one
considers MS-DOS, period.....except a few diehards and
anachronistics, maybe.

Oh, by the way.... I don't consider Fords as "cars", either.
But that means nothing more or less than your statement.

> Please stick to your (considerable IMHO) areas of expertise, before flaming
> (one of your own customers).

Where did I flame you? EXACTLY where/how, please?

Any why did you have to throw in the business aspect?
To intimidate me? It won't work, pal. My obligations
and commitments are far more to the hobby and the fun
and much less to the "business". I can cancel a "customer"
just as quick as a customer can cancel a vendor.

Perhaps you have the wrong idea of what I am all about?
You want a good sucking up? Go to Radio Shack. From
me, about all you've got now is my disgust. You had no
call to bring up business & customer crap.

You ever wonder why there is a dearth of vendors and
skilled business people in this newsgroup? Easy, pal.
Any time they'd disagree with someone, that "someone" would
jump up sniveling and screaming about how they treat
their customers. So they don't participate here.

In a word?

Bullshit, Higgins. Don't *ever* throw that at me again.
I don't play that game. Not in any sense of the word
that you could call "fun", anyway. You just deal with
me, one on one, in whatever vein or thread is appropriate.
We're talking "operating systems" here....and any so-called
"customer-business" relationship is not a part of it.

YOU were out of order, Higgins! Disgustingly so......

I would be interested in comments from anyone that has had an
opportunity to compare the PCR-1000 with either the Drake SW8, Icom
R71A or the Kenwood R5000?

|ICOM seems to think that the user should not have the programming protocol
|for the PCR1000) There's a lot of proprietary stuff about the Optoscan
|products as well. So I decided to get the COMMtronics CE232 for my 2006.
|Market forces at work :-) Some folks have hacked out the PCR1000
|interface protocol and posted it to the NG's.
|Good Signals,
|-- Chuck

Just out of curiosity, what's Opto hiding with the Optoscan boards. I've had an OS-456 since they came out. Just after getting my board, I asked for and received a complete (at least as far as I can tell) programming manual. I'm aware that there was an cell unlock code for the OS-535 that they did not release, but this was forced upon them by our dear Uncle Sam.

5584. Reation tuning/new scanner purchase

Newsgroup: rec.radio.scanner
Date: 1998-02-20 00:00:00 UTC
From: xternal <xternal1@yahoo.com>
Message-ID: <34EE0A8A.7338@yahoo.com>
Source record: 169797

I have been reading lately about the Opto Scout, and am very interested in the implementation of it for reation tuning. I would have to purchase a new scanner, obviously the pro 64 won't cut it. I am currently interested in either the iCOM ic-r10 or aor 8000. Yes, I know these are in 2 different leagues. The aor seems a bit out of my price range, however, the main point holding me back from the r10 is it's extrememly slow search and scan speeds. What are your experiences with either of these models, esp when used in conjunction with the scout. Also, is it still possible to recover blocked freq's(cell) on the aor? Oh yeah, the other thing that concerns me is that the the various cables for the aor seem to be significantly more bulky and expensive than those for the r10.

|below 30 Mhz & the Hign frequency bands. And is the PRC1000 in the same
| class as the Icom8500. Would Like to hear from any one who has any of
|these radios & are they happy with them. Thanks

I have both. What you get will depend on whether you want to use only computer control or computer control and stand alone. While the PCR-1000 only gives you computer control, the R8500 gives you both (a must during power outages). Also, there's nothing like having the big knob to spin through the spectrum.

You also need to consider below 30Mhz. My computer and monitor play havoc with below 30Mhz reception. While I'm working on correcting the problem, right now I prefer to listen with the computer off.

Assuming this isn't some sort of put-on, I'm in agreement with Cheeks.
Canceling and forgery are unacceptable. This is the first I've heard
of it, so I have no information to offer. Searching Deja News may
shed some light on things. I don't believe that Deja News accepts
cancels without authorization.

I have an '87 s-10 and i put a clip on the flat part of the dash on the left side of the steering wheel and i clip my handheld scanner there. It right at steering wheel level so its easy to see and use and i have my eyes off the road less when pushing buttons or looking at the channel, etc. Maybe something like that could be done if you have a handheld.

Additionally, Walt Disney World property has the "right of emminent domain"
(please excuse any mis-spelling there.

Not even the county sherrif's can go on Disney property without their
permission. If I remember correctly, I think that the only rights the
state/county has to go on Disney property without permission is to
investigate a felony (capital murder, etc.).

Using TV Antennas with Scanners
by Richard Kendrick CET, N7NT
wa7twi@primenet.com

OVERVIEW

Finding and obtaining suitable antennas for general scanner use has been a hot topic for a long time. There has been a storm of controversy surrounding television antennas and their suitability for scanner use. This article will show that television antennas can be a suitable and cost effective solution as a general-purpose directional antenna for your scanner station.

Television antennas come in a variety of sizes and designs, with equally wide variety of specifications. This diversity causes confusion for the scanner listener trying to sort all this information and find a suitable antenna to use. The number of elements and what frequency range to buy are probably the two most common questions.

Generally, the more elements on an antenna, the better the performance. If the stations you are trying to hear are more than 25 miles away, the larger antenna arrays would be a good choice.

BASIC DESIGN OF TELEVISION ANTENNAS

Most TV antenna designs are based on the Log Periodic Dipole Array, or LPDA. The LPDA is similar to a Yagi in construction and appearance, with the main difference in the elements and how they are connected. The LPDA has a series of progressively smaller "active" elements placed on a boom where the longest element on one end, and is a half wavelength at the lowest frequency. The shortest element is on the opposite end, and is a half wavelength at the highest frequency of interest. The end of the antenna with the shortest elements are pointed towards the target transmitter.

The chief benefit of the LPDA is the wide frequency range over which it can be operated. Typically, the antenna can be used over a range of frequencies having a ratio of 2:1 or higher. The main electrical characteristics of feed-point impedance, front-to-back ratio, and gain remains more or less constant over this range. This is not true, however, of the Yagi antenna.

For the LPDA to be useful as a TV antenna, it actually needs slightly more bandwidth above and below the standard TV channels. That additional bandwidth, or overlap, can be utilized by the

scanner listener to squeeze just a little bit more frequency coverage from the antenna than the designers originally envisioned.

FREQUENCY COVERAGE

The frequency range of the antenna you choose depends on what segments of the frequency spectrum your listening will focus on. Antennas are available that cover the VHF channels only, the UHF channels only, and, of course, the VHF and UHF channels. Many models also include the FM standard broadcast band. For the purpose of this article, it will help to define exactly what is meant by VHF, UHF, and standard FM broadcast bands with respect to frequency.

The frequency assignments for the television broadcast band is not a continuous span. The VHF range is specified as channels 2 through 13. Channels 2 through 6 cover the 54 to 88 MHz range and channels 7 through 13 span 174 to 216 MHz. Sandwiched between channels 6 and 7 is the FM broadcast band covering 88 to 108 MHz. Channels 14 through 83, the UHF range, is 470 to 890 MHz. In recent years, the spectrum covering channels 70 through 83 have been reassigned to the Land Mobile and Cellular Services.

View the TV antenna as a device that covers three separate frequency ranges. Based on the nominal bandwidths of a video signal, the three frequency ranges are 54 to 108 MHz, 174 to 216 MHz, and 470 to 890 MHz. Depending on the antenna, the lowest range covers approximately 50 to 112 MHz, yielding a frequency ratio of 2.24:1. Since the center range has a ratio of 1.24:1; it typically would cover a much wider spectrum. By keeping the 2.24:1 ratio, we could expect a frequency range of approximately 120 to 270 MHz. Design tolerances would fill the gap between 112 and 120 MHz making this range useful, too. The highest range has a frequency ratio of 1.89:1. Keeping with the 2.24:1 ratio would give a useful range of 420 to 940 MHz.

POLARIZATION OF TELEVISION ANTENNAS

The last criteria that must be addressed is the orientation, or polarization of the antenna. TV antennas use horizontal polarization and the type of stations scanner enthusiasts monitor have vertical polarization. Horizontal polarization is where the antenna elements are parallel with the surface of the earth and vertical polarization is where the elements are perpendicular to the Earth's surface. TV antennas are designed for horizontal polarization and might require modification for scanner use.

FEEDING THE TELEVISION ANTENNA

There will be no significant performance loss if you use 75-ohm coax and a TV type 4:1 balun. Just choose a good grade of coax with good ultraviolet resistance. Even though many scanner radios have a 50-ohm antenna input impedance, the nominal SWR (1.5:1) is not a factor for receive only installations. The SWR will vary widely of

the intended frequency ranges and will never be optimum. Yes, there is a small amount of loss, but the loss is negligible. You still have the option of using a 6:1 balun and 50-ohm coax also.

MOUNTING AND MODIFICATION OF TELEVISION ANTENNAS

Whether or not the TV antenna needs modified, is based on the type of mast used to mount the antenna. Reorienting the antenna in a vertical fashion puts the mast right in the center of the antenna elements. The presence of the metal mast parallel to the field of the antenna elements would distort the radiation pattern and degrade the overall performance of the antenna. Using a wooden or fiberglass mast solves this problem. If you use wood, some form of weather proofing will be needed in certain parts of the world.

Mounting an antenna with the mast in the field of the elements will require the antenna to be physically modified. Fortunately, the modification is very simple. Most TV antennas use square tubing as the boom. Locate the two mounting holes for the u-bolt clamp and drill two 9/32 inch diameter holes 90 degrees away from the existing holes. Be sure to keep the same center to center spacing so the clamp will pass through the holes comfortably. Depending on the antenna you chose to modify, you might have to move the location of the mounting holes forward or backwards one or two inches to clear an element or the feed system.

If you choose not to modify your antenna, you will need to mount the antenna about a foot from the mast. This will make the mounting more complicated mechanically. Either method will work because neither one is superior to the other. It will depend on what materials you have to work with and your budget.

CONCLUSION

Using a television antenna in a scanner monitoring station offers a reasonable cost to performance trade-off for the scanner listener. You get coverage of the 50 to 270 MHz and 420 to 940 MHz frequency ranges, high gain, good front-to-back performance, and directivity using standard inexpensive TV rotator systems. Obviously, not all antennas available will perform the same in all locations. But for the price and ease of use, the television antenna will provide many happy scanning hours.

Many of the RS scanners made by Uniden have test modes. It appears that
once a particular frequency is programmed into memory, the scanner does not
check it again to see that it is within the allowed bands. See if your
scanner can start a "direct search" from any of these channels? What step
size is used in both of the cellular bands? The cellular frquency entered by
the test mode was only valid when searching in 30khz steps, while the ones
you've listed are only valid when the scanner is using 12.5khz steps. PErhaps
plugging the AC adapter in with the scanner on could corrupt the memory,
resulting in false data. If there is some way to reliably do this, perhaps
cellular could be resotred in other Uniden made RS scanner, such as the
Pro-26.

Try saving one of the 870MHz freqs into a monitor memory and then into a
channel. If you start a direct search from that channel, you probably could
access the rest of the cellular band.

> Whats going on here? What happened to the
> 850 range?

The PRo-2032 is a double conversion receiver, most of which use 10.7 or 10.8 MHz for the 1st IF. This means you will receive "images" 21.4 or 21.6 MHz away from the displayed frequency as well as that frequency. Cellular transmission are typically stronger than buisness repeaters, meaning they can block out buisness transmissions. I have this problem in my Pro-2022.

Top of the line scanners use tripple conversion, which uses a higher IF. This means the "image" frequency will be farther away from the displayed frequency and can be eleiminated or attenuated with good filters.

According to one of the scanner magazines, there are ship-shore
radio-telephones operating in this band. I don't know about cordless, though.

That will be *very* hard for Toilet Boy. He barely finished eighth grade and never went to high school. He'll use a lame excuse about someone else needing to show proof before he does. Just his way of lying and transferring blame to someone else for his miserable existence.

> 2. Name, address, years worked, where you have worked in the
> Two Way industry, along with specific job responsibilities.

The closest he's ever gotten to a commercial two-way radio is in a police
car. He was in the back seat and he'd just been arrested for solicitation
in Portland's notorious fruit loop.

> 3. Name, location, and class titles, of schools sponsored by Motorola
> that you have attended.

The only thing Toilet Boy knows about Motorola is they are in the electronics industry. The only "Motorola" schooling he had is trying to figure out how to set his Motorola clock radio.

> 4. Your actuall ISP address, not the USA.NET crud.

Toilet Boy steals his Internet access. He'll never admit to having a legitimate account.

> Now, these are all things that you have stated to me, that you have
> done. It should not be a difficult thing to prove.

Yes, Toilet Boy has made these statements. But, he has uttered more lies than truth in the last two years. Ergo, it will be absolutely impossible for anyone to prove what doesn't exist outside of Toilet Boy's tiny mind.

> Let's approach these things in an adult manner, not with statements
> about "I have posted those before" and "Not until you send me yours"
> etc.

Asking Toilet Boy to behave in an "adult manner" is asking quite a lot from him. Kind of like an oxymoron. He still hasn't finished going through puberty, so I'm doubtful anything remotely resembling your requests will come from him.

>For everyone now reading this... you can see that it is not possible!

It is very easy to cancel anyone's post. All you do is set your name, e-mail
and organization field to equal that of the post.

The problem is that *most* news servers do not accept cancel messages anymore
for this very reason. You could cancel anything you didn't agree with and it
would propagate to all the other news servers and kill the post.

You cannot even cancel your own real messages. With my particular news service,
I can send them an e-mail and they'll cancel my post if I ask them to, but that

only removes it from that particular server. If it's already been sent out, it will propagate through the world.

Nicely written piece Richard! The bang for the buck IS really there for the person on the tight budget too. I would venture to guess there are a lot of TV antenna collecting dust or stuck on a roof of a cable subscriber. Add a cheap second hand rotator (mine cost me around $25) and you are using a big gun for well under $100 or $50 or even less. Certainly the odds are it will perform as well if not better than the scanner beam Grove sells and many other antenna built for the scanner hobbyist.

Again, good piece, good ammo for the often asked TV antenna questions. Maybe it is time you started the R.R.S. T.V. to Scanner Antenna FAQ. :-)

Here is some info for you, hope this comes in handy...

Restore the Cellular Freqs. on Your BC200/205XLT!
This is so simple that anyone can do it, and you have to be
REAL sloppy in order to damage your unit.
There is no soldering involved, but if you do happen to mess your
unit up: YOU AND ONLY YOU ARE THE ONE THAT IS RESPONSIBLE. We take no
responsiblity for any thing that might become of you or your radio!
This mod. will also void your warranty, so open your radio and
check it out to make sure you can pull it off before you begin the real
work.
Now that we are through with the usual backwash of "spooky"
information we can now begin.

1.) Take the antenna and battery pack off of the radio.
2.) With a Phillips-head screwdriver, remove the two screws at the
back of the radio. Then remove the two screws and the battery
spring at the base of the radio.
3.) GENTLELY! pull off the back of the radio.
4.) Locate the two screws at the bottom of the board, and
carefully remove them with a Phillips-head screwdriver.
(Be carefull not to damage any of the surrounding components.
This is not to tough to avoid, but warrants mentioning.)
5.) EVER-SO-GENTLELY! pull the front panel away from the scanner
frame.
6.) On the front panel part of the radio, locate the microprocessor
IC (labeled UNIDEN UC-1147, its the biggest black chip on the
board) and the 10K ohm (brown-black-orange) resistor positioned
right above the letters "DEN" in the word "UNIDEN" on the IC.
***** MAKE SURE YOU LOCATE THE RIGHT PART *****
7.) With a small pair of clippers, clip the resistor right in two.
Make sure not to disturb any components around the resistor.
Leave the ends of the resistor on the board, all you need to
do is just clip it enough so that there is a gap between the two
ends. Take care to clean the remiments, made by cutting the
resistor, of the board.
8.) Check to see that there is no damage and everything is tidy.
9.) CAREFULLY reasemble the radio in exactly the reverse order of
how you took it apart. Be careful to line up the pins to their
sockets in the lower, left-hand side of the radio.
***** FAILURE TO DO THIS CORRECTLY WILL RESULT IN A DISPLAY
ERROR. WHEN THE RADIO IS TURNED ON NOTHING WILL APPEAR ON THE SCREEN.
don't panic.
I've done this before. The malfunction can be fixed by taking

the radio back apart, carefully, and making sure those pins are in the correct socket. I almost gave birth to a small cow when this happened to me and I was very relived to find out that this was all that was wrong.
10.) After you have tightened the screws, put the battery pack and the antenna back on the radio. Then press "MANUAL, 845.0, E". Within two seconds the freq 845.000 should pop up on the display.

Now you have completed the mod. for your scanner. I would now like to welcome you to the world of the forrbiden freqs.! You will now see the truth to the statement "Never say anything on a cellular phone that you do not want anyone else to hear." Unfortunately (but fortunately for us!!) there is an incredible number of people that do not know this and you will be suprised at the information broadcast across the airwaves.
Enjoy!

BEARCAT 200XLT CELLULAR FREQUENCY RESTORATION

AKNOWLEDGEMENTS

The following was extracted, and partially edited, from literature
received from:
MONITORING TIMES
140 Dog Branch Road
Brasstown, North Carolina 28902

If the reader desires to obtain the original literature, which comes
complete with an illustration of the circuit board and indication of
the resistor to be cut, a check for $2.00 along with a stamped self-
addressed envelope may be mailed to the above address. The turn-
around for my literature was very fast (Less than 1 week after
mailing my check). Although the directions presented here should be
quite adequate, the quick turn-around on the mail order literature
might provide the extra measure of visual security that some desire.
The documentation also includes a review of the BC200/205XLT scanner.

NOTES

It is unlawful to monitor cellular telephone conversations. It is
possible to monitor signals from the deleted ranges even without
conversion. Simply add 21.7 MHZ to the deleted frequency and enter
the higher (image) frequency. Reception is virtually identical in
strength to that which would be heard on the deleted frequency.
The frequencies deleted at the factory may be restored, but the
procedure should not be attempted by anyone unfamiliar with
electronic circuitry. No one anywhere, anytime, in anyway, etc...
assumes any reponsibility for damage caused by this procedure.

THIS MODIFICATION WILL VOID YOUR WARRANTY!

TOOLS

Small Philips Screwdriver
Small Wire Cutters

DISASSEMBLY
---
1. Slide off the battery pack and remove your antenna.
2. Remove the two screws from the back of the scanner, the two
screws which hold the battery retaining spring at the base, and

the battery retaining spring itself.
3. Carefully pry the bottom of the rear cover from the radio and remove the cover.
4. Locate the two small screws at the base of the circuit board and
remove them. Gently pull the front panel from the mainframe at the base and seperate them.

MODIFICATION
---
5. On the face of the circuit board that faces the front of the scanner when installed, locate the microprocessor IC labeled "UNIDEN UC-1147". Locate the 10K ohm resistor (brown, black, orange), which is positioned approximately along the longitud inal centerline of the board, and next to the microprocessor. The resistor is of the leadless type and should be positioned directly next to the microprocessor and above the "DEN" on the IC label.
6. Using the small wire cutters, cut the resistor body in two with out disturbing anything next to it. If the left solder pad comes loose, it may be peeled from the board. Brush or blow away any debris. This completes the restoration.

REASSEMBLY
---
7. Insert the top of the front panel into the slot under the volume/squelch control panel and, noting carefully the align ment of the dual-inline connector at the bottom of the board, press the front panel firmly into place. Be sure that the holes at the bottom of the circuit board line up with the holes in the plastic standoffs below them. Insert the two screws and gently tighten them.
8. Replace the back cover by inserting the top of the cover into the slot under the volume/squelch control panel; press the cover into place, insert and tighten the screws.
9. Reposition the battery retaining spring (slotted side toward notched hole), insert the two remaining screws and gently but securely tighten them.
10 Slide the battery pack into place; switch the scanner on to make sure the display comes on. If not, the battery is discharged or the dual-inline connector was misaligned during assembly (see step 7).

CHECK OUT
---
11. Assuming the display comes on, press: MANUAL, 845.0, E; within two seconds the frequency 845.000 should appear on the display.

no - the 235 is the portable model...get the 895 or the radio shack
version of the 895.

BTW - 235's age going for $160 - $175 used...

5617. OPTO Scout Problem

Newsgroup: rec.radio.scanner

Hi,
My OPTO scout frequency counter as suddenly gone deaf.

I seem to remember reading a thread in a newsgroup sometime ago
about how easy it was to burn out the antenna input of the scout
if it is operated too close to a working transmitter.

This may well have happened to mine.

I would be interested to hear from anyone with any knowledge of
this problem, especially which components are likely to have burnt
out and how easy they are to replace?

Thanks in advance for any help. Colin

Xe> patch cable. If so which one is easiest to do this with.
Xe> Any recommendations or ideas would be appreciated.

I built one for a xtal scanner many, many years ago. Mounted the
scanner under the seat and ran a cable under the floor mat so I
could mount the control head below the dash. It would really
take some doing to figure the wiring for a CPU-controlled one
however. There are so many things that could go wrong.

The following gear is in excellent condition - No C.O.D's - some help on shipping - advise zip code in reply.

May swap for Trunk Tracker or other scanners.

1. Kenwood TS-870S Xcvr - Serial # 70600274 - $1450 - SOLD
2. RS HTX-202 2mtr Hand held w/batt & ant - $95
3. MFJ 20mtr (cw) QRP transceiver - $90.
4. Icom IC-PS15 Pwr Supply - $100
5. Pyramid Phase III 35 amp (variable) dual mtr Pwr Supply - $100
6. Emco PS-12L (HD) 10 amp Pwr Supply - $25
7. Kenwood PS-52 Pwr Supply - matches 870 - $105 - SOLD
8. Kenwood SP-31 Spkr - w/audio filters - matches 870 - $75
9. Kenwood SW-2100 SWR/PWR meter (dual) - matches 870 - $90
10. Oskerblock SWR-200 SWR/PWR meter (dual) - $55.
11. Daiwa CN-101L SWR/PWR meter (15w/150w/1.5kw) - $70
12. Icom HM-12 hand mike - $20 - SOLD
13. Icom HM-7 hand mike - $30
14. Alfa 7705 Capacitance Meter w/case/leads - $50

Inquiries welcomed.

Just for clarification, the Radio Shack base model PRO-2050
is really a BC235XLT and not a copy of the BC895XLT.

About 12V and 300mA should do it. Be sure to check the
polarity(positive/negative tip).

Have fun and let me know if I can help answer any
questions!

One can cancel their own posts, however anyone that would have
retrieved ng messages between the posting and canceling would still
have gotten the post.
It is possible to cancel your own posts. And easy.
And it is possible for someone to fake header information and cancel
other posts also.

.....
.....
Sorry Bill,
As you can see from the various responses you have been getting, especially
the one regarding FIFO use, you've got it wrong. I wouldn't argue with
almost any anything you've said about hardware, but I've my specialty IS
software.

Things like Modems are doing all of the real work externally to the CPU.
Talking to them is almost like talking to a keyboard, which today has its own
processor too.

Like someone else suggested, if you think it can be done, then show us. Write up a program like MDT1234, that truly runs in Windows w/o losing bits. No cheating. None of your fancy hardware interfaces, just straight off the serial port please.

You may consider Windows an operating system, but for my purposes, it is not.

Please stick to your (considerable IMHO) areas of expertise, before flaming (one of your own customers).

H Higgins

FYI, you can read all about cancelling your own postings at
http://www.ews.uiuc.edu/~tskirvin/faqs/cancel.html/. You'll find no answer to
how to cancel someone else's posting there, but I'm sure just 5 more minutes of
web searching would yield an answer... :)

KMA-367 is NOT the call of the current UHF radio system, it is KJC-625.

In the olden days the officer would end his request to the dispatcher with the call "KMA-367". Over the years, and with the change from VHF to UHF, which has an automatic ID'er, the call sliped to just "KMA". It is now used by some as an ending to the transmission, and you can hear that inflection in their voice.

Perhaps with the next system the officers will end the transmission with "KJC"?????

Bob

HAMFEST March 8, 1998 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - MARCH 8, 1998

LINDENHURST, LI - NY

On March 8, 1998 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest-Computer Show. The location Will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.

This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams and information. Door Prizes. General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

ARRL VE - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Tom Favilla N2MIG at (516)957-5985, during EVENING HOURS (7PM-10PM), or info@gsbarc.org
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is available during the club 2-meter info net:
GSBARC-Monday at 7:00 PM on the W2GSB repeater, 146.685 -600 4Z(136.5)PL.
SCRC - Wednesday at 8:00 PM on the W2DQ repeater, 145.210 -600 4Z(136.5)PL .

I think Tim had it right - it is more fun to guess by inferrence 8*)

I'm really amazed that the original callsign has left such a legacy -
in years and years of monitoring, I don't think I've ever come across
an agency in which the guys in the field developed a fondness for an
obsolete call...

But it is a believable story - The CHP has it's mobile units ID
periodically since they're the only ones transmitting on the
mobile frequencies. If the original LAPD system was duplex
one could understand how 'KMA' could become habitual, even sort
of handed down to the next generation...

Well I downloaded this dos-based program and the DBF for my state (40 megs!) and
I have to admit this is nice enough for what I need. Full indexing and
searching as well as allows for updates. This might just be the first shareware
program I keep AND pay for. :)

Thanks, group!

Hi, there.

I just downloaded Radio Manager for Windows and bought the PC895 program w/ the cable. When I go to run either of these programs they both hang looking for the data from the scanner. I am using the BC 895 trunktracker and have the cable properly attached to the radio unit and to the computer. I have the radio in remote mode and have tried configuring each software program for each com port and still nothing. The Enterdev program (PC895) just hangs on the "initializing" prompt and never does anything. Is this a problem w/i my computer and with my com ports or is there something else going on here? If it is my com port configuration then how do I correct it?

Does anyone know what's going on here? The tech support from Enterdev is pretty slow, so maybe I'll get a better response here on the newsgroups.

Thanks in advance.

Andy

5650. 400 mhz vs 800 mhz trunk systems

Newsgroup: rec.radio.scanner
Date: 1998-02-20 00:00:00 UTC
From: kwislon@airmail.net
Message-ID: <FB69F5192CA2E199.3629F6BF7E0D3467.0A5B73E810D521F6@library-proxy.airnews.net>
Source record: 169871

I presently have a 800 mhz motorola trunked system in my service trucks that is provided by a local company who maintains the tower & charges us a monthly rate to use it. I own the radios. I am not satisfied with the reception quality. There are several dead spots in our service area, the xmission regularly drops out, and there is a lot of static on the radios.

Another company is trying to sell me service on their tower. They are offering kenwood trunked radios on 400 mhz with a tower that is closer to my service area but not as high.

Questions:
1. What causes static on a 800 mhz trunked system?
2. Are there any inherent advantages to 400 mhz or 800 mhz?
3. How can I determine which is best for my company?

If I could eliminate the static problems I would be happy with the system. The static is worse in the dead spots. The radio company tells me that the problem is in the installation & the installer tells me that the installation is fine.

I'vr had my Pro-51 (dated 10A5) for about 3 years now, but it just recently started acting strangely and can now (somehow??) get some of the cellular band.

I have not touched the logic board, circuitry, etc, and the old keypad trick never worked for this unit. Admittedly the symptoms did not occur until I - not following directions, of course! - began lazily connecting/disconnecting the A/C plug with the unit left on. One day, after plugging the unit in while on for some time now, the display briefly turned off and when it reappeared I had lost most of my saved frequencies, almost all banks were scanning, and many of the frequencies now stored in the banks were those not normally allowed to be keyed by hand. In fact, even though they're there and receiving I still can't type them in myself. Whatever was placed in the banks from something(?) during the power fluctuation has given me access to such freq.s as:

Channel Freq
24 724.4000
26 10.8000
42 74.6900
43 68.8650
44 75.9300
66 67.6800
81 335.3875
82 334.6625
83 330.4750
84 308.2250
85 262.4625
86 334.6250
94 91.6000
95 830.1875
97 215.0000
98 269.8375
101 213.0750
107 337.2000
110 299.5625
111 830.1875
113 215.0875
114 525.8375
118 748.0800
119 830.1875
121 39.8000
147 324.4000
158 91.6000
159 830.1875
163 286.1750

Missing freq.s above are either ones normally acessible, or were left 0.0000.

Also, I can now get some of the cell band. Programmed into the limit feature is a low of 29.000 and a high of 875.2500. If I hit LIMIT+UP the frequency counts from 29.0000 up to ?? (I haven't waited long enough to see where it 'flips'), but if I hit LIMIT+DOWN I get access to the cell band starting from 875.2500 continuing down to ~806 where the freq. jumps down to ~512.

Also, a strange phenomenon is that I can turn all the banks off - the scanner will not stop me like it used to - but it's then locked out until I manually reset it.

Has anyone else seen this? Given that I can receive cell and some other blocked bands do you think this might help someone understand something that would allow the newer Pro-51's to be moded to access blocked bands?

Thanks,

- mike

>that Mackey is canceling his own posts, and I
>have *never* canceled one of mine.

Author, his administrator, or in the case of a moderated group, the
moderator.

>I...and I alone....will decide what is best for me.
>I hope you feel the same way, even our definitions
>of "best" are radically different.

Ditto.

>I haven't the foggiest idea of what is going on,
>except that a large number of articles have been
>canceled by person or persons unknown. I think
>that's WRONG and it annoys me far more than Mackey
>and his proteges ever could.

Grabbing the actual cancel message and checking the headers is a
good way to build a case. If someone actually has access to a
Usenet stream feed, and can snatch and file cancel messages for
the group, thats a start. I checked three ISP's which I use, and
one at least keeps the control messages for enough of a portion of
a single day that I was able to get a few and check.

>I'm not sure if anything can be done about it, but
>the first step is to pool our knowledge of what's
>going on, I guess.

>Any takers?

They _appear_ to be coming out of tamu-commerce.edu. I say "appear",
because in order to verify this for sure, one needs to see various
routings of the Path in a single message in order to rule out any
of the other sites in the header.

Kirk,

Static is more or less a common occurence with many 800 MHz systems. 800 MHz signals are much more subject to reflection and absorbtion by various objects. Dropouts and dead spots are pretty much par for the course where a single site 800 MHz SMR is concerned.

A 400 MHz system, all other thing being equal, should have superior performance compared to an 800 MHz system. But are all things equal? Antenna height, gain, location, and transmitter power, among others are all relevant factors. Practically you would have to try it out to be sure.

Can you get the 400 MHz operator to let you try a temporary installation for a while. Perhaps they could supply you with a handheld which you could connect to a 400 MHz antenna on one of your vehicles. Ask for the names od some current 400 MHz users and see what they have to say about the service.

It's almost certainly not the installation. If the antenna and cable are in good condition then it's unlikely your installation is the problem. You are using a 3 db gain type antenna I assume. If not you

should try one of those, but I'm sure they would have told you that already. Hope this is helpful.

ICOM seems to think that the user should not have the programming protocol for the PCR1000) There's a lot of proprietary stuff about the Optoscan products as well. So I decided to get the COMMtronics CE232 for my 2006. Market forces at work :-) Some folks have hacked out the PCR1000 interface protocol and posted it to the NG's.
Good Signals,

Well teh bc235 is a trunktracker..it will track motorola trunking systems..not needed for teh races..at least not yet..some day maybe...as for the HS200..a much better pick for teh races...you can enter the pl code..for the drivers frequency and only hear that driver..nothing else that might be on that frequency.such as vendors...security..ect....as for the audio mod..it increases the volume sent to the headphone jack...personally i cant tell the difference..but i GOOD set of headphones is a must...not the 29.99 that they sell ..you want something that reduces the db rating

>

The above paragraph makes no sense whatsoever.

Here's a possible explanation of why MDTW1234
works only under DOS. This applies to any program that
tries to interpret non-ASCII digital data streams
using a PC compatible's serial port (some other
examples are Hamcomm, JVFAX, RadioRaft, Trunker, and
the PD Pocsag decoder). First, the incoming data
stream cannot be processed by the serial port's UART -
the UART would try to sync up with non-existent start
and stop bits (this also means you cannot possibly use
a FIFO buffer). Instead, one of the serial port status
lines is used to trigger an interrupt whenever the
incoming data stream changes polarity. The program
then uses the timing between interrupts to reconstruct
the bit stream and extract the appropriate
information. These kind of programs will only work if
interrupts can be processed fast enough.

I once measured the time it takes a 100MHz
Pentium machine to respond to an interrupt. Running
with Windows, it sometimes took up to two milliseconds
for the operating system to transfer control to an
interrupt service routine after the interrupt request
was made (and this with only one active application
and absolutely NO mouse movement!). On that computer,
interrupts cannot be serviced fast enough to decode
even 512 baud pager tranmissions. For a 9600 baud
signal you could have dozens of bits fly by in the
time it takes to pass control to the service routine.
In contrast, a similar test in DOS mode showed that an
interrupt handler gets control within 10uSec of the
interrupt request. As you can see, a program running

under DOS can potentially service an interrupt several hundred times faster than if it were running in a multi-tasking environment like Windows.

At this point someone will say "That can't be true. You've just said that I might not be able to receive a 512 baud pager tranmission under Windows yet I know damn well that I can get 57 kilobaud with my modem." Well, using your modem immediately relaxes interrupt timing requirements by roughly a factor of 10 because it sends complete bytes on to the processor, not individual bits. You gain at least another factor of 10 with the FIFO buffer. So, your modem works under Windows because its timing requirements are a hundred times less critical.

To sum things up: Windows slows down interrupt servicing to such an extent that programs like MDTW1234 cannot work properly.

As for improvements, it's ludicrous to suggest using the serial port's FIFO buffer. The only way to get applications like MDTW1234 to work in a multi-tasking environment is to offload the raw bit handling onto an external processor. Well... rewriting the operating system might be a simple, trivial alternative for those of us who know as much as Bill Cheek.

>If the amateur programmer doesn't know a FIFO from
>a fido, then he won't use the buffers and an INT
>scheme, and therefore his kludge will suck up 100%
>of the CPU and system resources.
>
>To date, that's pretty much what the radio hobby scene
>has been handed.....just a bunch of kludgy applications,
>or in some cases, darned good DOS applications from die-
>hard DOS programmers who won't elevate themselves.

Why don't you put your money where your mouth is? Nothing stands in the way of you writing your own applications. But then again, it's much easier to sit back and criticise others (like I'm doing right now).

>
>In a word, there is no inherent reason why the Windows
>operating systems can't run anything and everything that
>radio can throw at it.....so long as it conforms to the

In a word, you simply don't have a clue as to what you
are talking about.

5677. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.scanner
Date: 1998-02-20 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cj0i1$o42@bgtnsc02.worldnet.att.net>
Source record: 169914

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

> "In God We Trust, All Others We Monitor"
This is just my opinion:
I can't believe they would withhold this information, what about us do it
yourselfers. I am a HAM, building stuff and experimenting is what I do.
Who in the hell do they think they are?
Looks like there will be NO ICOM in my future, shame, I am planning on buying
several new rigs over the next few years...I had my eye on an ICOM 706 for my
vehicle, but if this is ICOM's way of treating the consumer who is purchasing
their products, the hell with them, I won't buy anything they sell. Great
marketing strategy, alienate your customers!
Looks like a TEN TEC for my HF and YEASU for my VHF/UHF. They won't be getting
my money!

TEN TEC has an excellent reputation of working with their customers and helping them out, even talking guys through trouble shooting over the phone. There technicians were ready to talk me through trouble shooting a 20 year old Ten Tec HF rig over the phone... I can't imagine buying any communication gear used in HAM radio and not getting that kind of support, let alone buying a receiver and being denied simple instructions on programming the radio through a RS232 cable. In my opinion (as is this entire post) any company who would deny the purchaser of their product, simple programing information is pretty lame. Imagine buying a VCR, but not being allowed access to any manual on how to program it...and then be forced to buy a comercial piece of software to be able to operate that VCR. What is the motivating factor here? Greed? Or are they affraid that some creative minds might come up with some inovative software to operate their product better than they might be able to? I just won't support such thinking.

Will they be making Software for PC/MAC/ATARI/COMMODORE/TRS80/Z80? Or will they be expecting everyone to go out and buy the computer of their choosing?

In my opinion, anyone who supports a company who works like this, deserves to pay through the nose for software to give simple programming instructions over an RS232 cable. As long as consumers buy the product this way, they will figure they can get away with it. It is really up each person to decide, but think about how many great Freeware and Shareware products have been made over the years...do you want to see this source of inexpensive and inovative quality software disappear...well that is what you will be supporting if you buy products from companies who would deny their customers the right to have basic programing information...I say no to total domination control freaks!

Good luck and 73!
Nathan

com (rcomm@hotmail.com) wrote:
: There are many reasons why ericsson and even E.F. Johnson LTR beats
: rotomola... I mean motorola. The motorola system has a protocol called
: "fail soft." The local motorola system goes into fail soft once a week or
: so. When the system goes into fail soft, which is when the computer screws

Why don't you insist that Motorola fix the problem, under warranty? That
failure rate is totally unacceptable.

My Motorola trunking system has never gone into failsoft, in over two years
of operation. Other systems around the company seem to be just as reliable.

: up, all of the users revert to conventonal/non-trunked mode. The users are
: each assigned a fail soft channel. When the system screws up - they revert
: to their fail soft channels, many of them share the channels, they can all
: hear each other, which means the "Privacy Plus" system is not so private.

Correct. It is a limitation of having a dedicated controller.

: If two wreakers share a fail soft channel, one can steal the other's calls
: and get there first. It usually takes the local Motorola shop a day or so

Sounds like a programming problem - assuming that the wreckers work for
different companies. If for the same company, then the company should
do something about such actions.

: to diagnose the problem and repair the system. If the central computer
: screws up really bad or the control channel (which tells the mobile which
: talk channel to use and preforms other data functions) goes out, the system
: is completely useless. The motorola system also has a hang time which holds

It only becomes useless if all the repeaters go down, including the repeater
that is the control channel. Of course, if you are stupid enough to have
only one talk group on the radio - the one repeater failure would make the
system useless. But that is a user problem.

: the channel up for a set amount of seconds after you let off the PTT. This
: may be ok while you are talking, but when the system is busy, like the local
: system is 75% of the time, it really gets annoying - that hang time keeps
: you from talking and makes the system less efficent, it is wasted time.

The hang time can be set. On our system, it is essentially zero.

: Only certain set channels can be control channels or data channels on the
: motorola system. Ericsson radios can be simply re-programmed when the

All repeaters (except one) can be control channels. It depends on how the system is programmed. The control channel is rotated through the repeaters, which evens out wear and tear.

: system is upgraded - but most motorola radios need to be replaced, the
: Ericsson system won't go obsolete. Ericsson, on the other hand, has a very

Really? We have been upgrading our trunked systems for over 10 years, and still use the old radios, as well as the newer versions. The only time new radios are required is if you go to a new band.

: efficent system. Ericsson offers faster access, greater coverage, and
: better control over the radio systems. EDACS - Enhanced Digital Access
: Communication System. Ericsson / GE pioneered and implimented many of the

The Ericsson system has ONE advantage. Despite what you claim, faster access, greater range and better control are not that advantage. The advantage is that if the control repeater fails, then the control will automatically switch to a different repeater. That means that there is no such thing as failsoft.

: electronic communication systems that we take for granted today: telephones,

I bet the Bell people would be surprised to hear that GE/Ericsson pioneered telephones.

: televisions, FM radios, and cellular phones. Ericsson can run data
: communications and voice on the same channels and don't require data-only
: and voice-only channels. Also, one radio is used for voice and data. Wide

As far as I know, so can Motorola. It seems that Spectra radios work fine for both digital and analog signals - on the same radios and repeaters.

: area, telephone. Trunking allows users to only hear messages intended for
: them and preventing interference. The Ericsson system will give the user
: exclusive use of the channel for the duration of the call and users can't
: key over each other, certain calls may have priority access and they will
: get the first avilable channel before other users. Ericsson offers

All of this is true for Motorola, as well. Both Ericsson and Motorola allow a number of ways to program their controller software.

: "non-stop trunking" - if the central control computer equipment - or site
: controller - gets completely destroyed, the independent repeaters and
: channels have the brains to keep the system in operation and trunking. It

There is no real "site controller". As you state, the control channel can automatically switch. That is the advantage offered by Ericsson. But, given the very low controller failure rate my company has experienced, it is only a theoretical advantage.

: has self-diagnostic software and a fault-tolerant aricitecture. This
: prevents the user from having to purchess expensive back-up computers. When

The same is true for Motorola. Maybe you are thinking about the failure of a dispatch console?

: the motorola system is needed most, durring a disaster of some kind, most
: likely it is in fail soft and reverts to conventonal mode which trunking is
: supposed to correct. Any failure in an EDACS only breaks part of the system

Why would this be the case? Why would a disaster hit the controller, and not
the rest of the system?

: and the rest keeps working. The end used would never notice a failure.

True.

: Only the communications staff knows of the failure. Not many people know
: that an EDACS system can go to conventonal mode in a catastropic failure but
: in the system's 10 year existance no one has ever relied on this function.

Possibly.

: No system uses radio channels more efficiently than EDACS. Another fact

Both systems seem to be about as efficient for channel usage.

: which is good for the user is that EDACS is less easy to follow a
: converastion on. I know we all like listening to radio communications, but
: if you were the user would you want other people listening to your
: conversations. EDACS will run analog voice, data, digital voice, encripted
: voice for high security, and telephone calls all in one system. Users can

The same can be done with Motorola systems.

: also signal for distress with a push of a button. E.F. Johnson's LTR or

This can be done with Motorola as well - except for 900 MHz trunking.

: Logic Trunked Radio is a less expensive but a highly efficent and reliable
: system. It can have up to 20 channels and does not have a control channel.
: All data to the radios is transmitted subaudibly while the user is talking.
: The repeater sends a data burst every ten seconds which tells the radio that
: it is online and usually operates the out-of-range indicatior. The radio
: has a home channel and goes to that channel first. When the radio trys to
: access the system, it sends burst of data to the home repeater, the repeater
: then either grants or denies the mobile access. All conversations start on
: the home channel and if the home channel is busy with a conversation, the
: data assigns the mobile another channel at random. The LTR system offers
: phone and multiple towers can be linked together. The LTR system never
: reverts to conventonal mode. If the system is busy the radio will give you
: a busy signal and beep when a channel is avilable. LTR is a very simple
: system and it works very well. There are many different brands of radios
: that work on LTR, but only radios made by the system manufacturer and
: several exceptions work on other systems.

Most of this is true for both Motorola and GE/Ericcson as well. The exceptions
are that they have a control channel and that they require the manufacturer's
radios be used. This may change in the future, if the push to requiring
interchangeability of radios goes through as scheduled.

That home channel "feature" sounds like it would make it much easier for a person to monitor traffic using a scanner. And, if the system is busy, then there would be little chance of the home channel being free. The system would then perform exactly like the Ericsson and Motorola systems.

: Now that you have seen some of the facts, please look into other brands and
: types of communication equipment instead of instantly saying that motorola
: is best - because it isn't!

It may not be the best. However, many of the "facts" you listed are false. I personally prefer the GE/Ericsson system, because of the dynamic control channel feature. However, the Motorola name means a lot, when it comes to users being confident in their equipment.

That may change in the future. However, I have seen GE/Ericsson lose out on several competitive bids - just in the last year. I at least two of them, it was because GE/Erickson's bid was far above that of Motorola. The dynamic control channel feature was not considered important enough in an industrial setting to warrant the difference is price.

"Keep Michael Awake"

Actually though, what's more fun than just being told the answer (which
I don't know) is to figure it out by inference, deduction, traffic content
analysis.

Am I correct in that it's just the officers saying it, & not the
dispatchers? Just a certain unit (e.g. one that doesn't have access to
MDTs for running people & plates)?

5688. How do I make a simple crystal-based VHF reciever?

Newsgroup: rec.radio.scanner
Date: 1998-02-20 00:00:00 UTC
From: Dag Erik Syvertsen <dagerik4@sapfo.hibu.no>
Message-ID: <34ED4805.5162@sapfo.hibu.no>
Source record: 169925

OK, first of all the usual apology if this posting is out of line.
I just couldn't find info on this anywhere, so I though I'd just
ask the experts. ;-)

My question is simple: How do I make a VHF reciever for one
specific frequency, using a crystal for that freq?

Any hints or links would be useful. I want it as small and simple as
possible, and it is only meant for local use, so it doesn't have to
be all that sensitive.

OK, that's all I wanted. Sorry if this is a FAQ.

Regards, Dag Erik.

Sorry for the deception, gang, but someone
is canceling articles posted to this newsgroup,
ostensibly those that are "off topic". Chances
are, they will cancel this post, too, but perhaps
not before a few of you get to read it. So I
composed the subject line to attract the widest
possible attention in the shortest possible time,
and have a chance to elude the censors for a while.

Please forgive me.

While it *may* appear to be a good deal that
Mackey's prolific posting no longer appears
here, is THAT *really* such a good deal?

I mean, it *is* censorship, right?

Well, to the best of my knowledge, the only
way to legitimately cancel an otherwise lawful
post is for the *author* to cancel it. I doubt
that Mackey is canceling his own posts, and I
have *never* canceled one of mine.

But....since a large number of posts from a
variety of people are being canceled, this pretty
much means FORGERY, as well as censorship.

In my own humble opinion, I say it is far better
to have a whole, intact, unaltered newsgroup than
someone else's idea of a "perfect" one. I don't
abide governments, corporations, or individuals
deciding for me what is best.

I...and I alone....will decide what is best for me.
I hope you feel the same way, even our definitions
of "best" are radically different.

I haven't the foggiest idea of what is going on,
except that a large number of articles have been
canceled by person or persons unknown. I think
that's WRONG and it annoys me far more than Mackey
and his proteges ever could.

I'm not sure if anything can be done about it, but
the first step is to pool our knowledge of what's
going on, I guess.

Any takers?

The BC-890 was probably picking up "images" and
other pseudo-signals. The PRO-2032 is by far
the better scanner of the two.

There is a chance that the 2032 is misaligned or
faulty in some area, but knowing nothing more at
the moment, I'll stand on the BC-890 picking up
stuff that really isn't there.

Soundman,
The choppers at Indy. use 155.16. Your best set is to find a police or fire officer and ask them. Trying to find who owns the birds is another way, but not so easy. But if you can, try looking the owners name up in http:www.perconcorp.com and see if you have any luck.

Good Luck & Happy Scanning

You sound just like Art Bell. There is no way to cancel or censor
someone's post as it goes to many ISPs. The person who posts can't even
cancel thier own post like you suggest.

For those who disagree, let's see you "cancel" THIS post!!
For everyone now reading this... you can see that it is not possible!

5702. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.scanner
Date: 1998-02-21 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cnelg$fu6@bgtnsc02.worldnet.att.net>
Source record: 169689

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

A permanently installed, gain type mobile antenna might be better than the temporary magmount they gave you, but I wouldn't count on it. I'd consider the currently demonstrated performance to be about what you will see with a permanent installation. It for sure shouldn't be any worse.

>

Yes they are both FM. However it is narrowband FM, not like the wideband broadcast FM you are familiar with, and so does not exhibit similiar noise performance.

>I have tried using the 800 mhz radios with the truck engine off. That
>seems to help but doesn't eliminate the problem. My mechanic says that
>the problem might be the truck tires & static electricity.
>
I assume with the engine off you are standing still. That would eliminate the tires as a source of trouble. At 800 MHz, ignition noise shouldn't be too much of a problem with modern vehicles.

>What is a 3db gain antenna? No one has said anything to me about one.
>The antennas on my trucks look like cell phone antennas and the base
>is a yagi.

If the mobile antennas look like cellphone antennas then you do indeed have 3db gain antennas as I would expect.

If the base station antenna is really a yagi then that could be the problem. Yagis are directional antennas designed to concentrate energy in one direction. If the transmitter site is at the far end of the desired service area a Yagi might be used but I doubt that the coverage of the service area will be very uniform. It's possible the site is using multiple Yagis spaced on opposite sides of the tower to

get an omnidirectional pattern but I'm inclined to think that a Yagi is not really being used. Rather, I would expect some type of omni-directional colinear gain antenna.

5706. Re: "Disaster" frequencies

Newsgroup: rec.radio.scanner
Date: 1998-02-21 00:00:00 UTC
From: Brian Humphrey <brian.humphrey@prodigy.net>
Message-ID: <01bd3f12$25bc4aa0$21b4edcc@default>
Source record: 169693

Toscano <toscano2@ix.netcom.com> posed a rather intriguing question as to what to listen to:

> If there were a man-made "disaster" (anything from NBC attack to full-scale riot)

Sir or Madam: Your request is *profoundly* broad and sadly not location specific. There is no "super-list" for _all_ "man-made disasters". Please remember that regardless of the scenario, such incidents escalate. The same local and regional "first-responders" that handle day-to-day problems in your community will be the first folks on the scene then. It is at this early juncture that radio-traffic remains most understandable to any one person. Yes, I understand that many of us enthusiasts have developed a "third ear", but as an incident escalates into requiring the involvement of State and Federal authorities, it soon is beyond even the most dedicated enthusiast to glean from the broadcasts information for which they may need to stake their lives on (or those of whom they love).

Should you therefore forget about monitoring such frequencies? No. But your initial action(s) based upon early radio traffic may determine your future prospects of survival. (Please remember that you particularly asked about such massive events as a Nuclear, Biological or Chemical Attack or Riot that you might possibly monitor traffic from).

How have I have prepared for such an event?

I listen at my shack with an impressive array of radios on a regular basis. If somehow , the scenarios you suggest should occur (**in an area close enough for me to monitor**), I would immediately get my "go pack" into the car and head the opposite direction from the disaster. As I could conceivably have to abandon the car, I maintain a single portable scanner and more importantly, a walkman-type AM-FM radio. My motto? At such a life-changing moment, a person must quickly choose to set-aside what they "want" to hear for what they truly "NEED" to hear!

And what would I listen to? Transportation related frequencies as well as those of local Fire and Law Enforcement. If I am travelling, I need to know about my travel plans and not necessarily when the Lt. Governor and her entourage will arrive at a distant EOC. Kapische?

In the massive world history-changing scenarios you mention, I would think it beyond futile (and likely quite stupid) to sit in one place that was close enough to "hear the action". Far better to survive and enjoy more days of scanning, than be found dead at home in front of a bank of scanners with a silly smile on one's face. <g>

That much said, don't sweat having a "ready-list" of State and Federal frequencies for the incident of the century. Just search, find ones you like to listen to and enjoy!!

Please remember that at the zenith of activity we will do most of our important sit-stat and re-stat communications via digital and satellite links that will probably never be accessible by off-the-shelf monitoring equipment. Many agencies, such as mine - will however go to _great_ lengths to inform the populace of the information they NEED to know via commercial AM radio broadcast (as well as FM & TV?) after a formal EAS activation.

Stay Safe my friend and Monitor Safely!!

-brian-

I have made a copy of PCRScope1.0 available to the public. This is a preview version in it's very early stages of development. I would like to get some inputs on features and bug reports. Please be gentle to the knobs so that they don't fall of. Some of the functions are:

Single click on spectrum (after sweep) = QSY to that frequency

Double click on spectrum (after sweep) = Zoom in

Please do not exceed 5001 points. Points can be reduced by increasing the step size or decreasing the sweep band. Try different bandwidths, modes, step sizes and let me know what you think. Use at OWN'S RISK.

I have just purchace my first scanner and it is the Radio Shack PRO-26.
Is the antenna that comes with it an adequate/good one? What would be
the best/least expensive antenna to purchace if I were to replace the
one that came with the scanner?

Bob

5717. Help: Los Angeles County Fire

Newsgroup: rec.radio.scanner
Date: 1998-02-21 00:00:00 UTC
From: Mad Scanner <madscanner@hotmail.com>
Message-ID: <34EF96C1.34A@hotmail.com>
Source record: 169704

Are there any persons present on this group with access to the latest frequency and station/battalion lists for the Los Angeles County Fire department? Recently the cities of El Monte and Covina dissolved their municipal fire departments into the LACOFD system, and I'm really hoping to get the latest frequency lists (for both the VHF White and UHF Blue systems) and station/battalion charts.

Any information would be greatly appreciated.

Brian

Man, I hope that you are wrong about this. I kinda had a fear that this might be coming some time soon. I live in Jefferson County and monitor very frequently. If they do this, I might as well throw my scanner in the garbage.

Do you know if one of the new "trunk tracker" scanners would be able to follow the signal if the police were to convert to a trunked system? Thanks for the info.. Mike

> of it, so I have no information to offer. Searching Deja News may
> shed some light on things. I don't believe that Deja News accepts
> cancels without authorization.

DejaNews might not.....but the point of origin of
a cancellation doesn't matter. A cancel can be
injected anywhere that allows cancels and most
servers do.

Once injected, it traverses the Internet to all
NNTP servers where the cancellation will be
implemented. I guess forgeries for cancels
are feasible, too. Obviously.........

Ferinstance, DejaNews shows Mackey having one
of his more prolific periods. My server has
gotten almost nothing from him lately, and
it ain't because of any Twit Lists, either.

Someone's playing "god", to put it succinctly.

As a dual-conversion electronic clone of the
PRO-34 handheld, the 2022 certainly was a
decent scanner in its day.

It's not worth anything now other than what
some desperate buyer will pay. That could
be as high as $100, if not more. Intrinsically,
it's not worth $50 unless in pristine condition.
And even then......?????

But the market is what decides. Not me.

Being a lifeling scanner enthusiast, I have my own opinions about this, but...
If there were a man-made "disaster" (anything from NBC attack to full-scale riot), what frequencies would you folks recommend monitoring? I am not going to post my lists because they are far too long, but generally I have the Fed. Executive Board emergency channels, FEMA, local National Guard, nationwide law enforcement command, local nets, NIIMA, local Air Force FIW and TFW, etc. I think it would be valuable if we traded ideas and specific freqs before it's too late to use our "search" fearures!

You could have bought a *new* PRO-2041 for $180 during
the whole month of January when Radio Shack had them on
sale. Incidentally, it is the PRO-64 not the 62 that is the handheld
counterpart of the PRO-2041.

If it was a forged cancel how would they know? I'm sure they don't
check the path of each and every cancel. The authorization is probably
the From and Reply headers which have to match the original post.

Tyler,

If you can't contribute anything useful to this thread
then you should stay out of it. It's a serious situation
when someone starts forgecancelling posts and if they are
caught they are in *serious* trouble.

If someone were cancelling your posts, you'd probably be
squealing like a pig.

I have a BC895xlt with cmpt software installed.

Its on com port 1.

Com 2 is my internal modem.

Open my computer in windows, go to control panel, open it.

Open system icon.

Click on the device manager tab.

Go to you com ports .

Make sure there is no yellow exclamition mark in from of them.

Click on a port, in the windows it should say device is working
properly.

If this don't help, something is wrong with the cable or you scanner.

Been using my scanner with cpu for about 6 months, made my own cable.

good luck!!

in the newsgroup rec.radio.scanner,
bcheek@san.rr.com (Bill Cheek)
from COMMtronics Engineering / World Scanner Report thoughtfully
posted:

> Fifo buffers on a serial port are.... ummm... hardware.
> If you can't take advantage of them via software, I
> don't know what to say.

Whoa! Let's clear up a common misunderstanding!

MDT, Trunker, Hamcomm, Baycomm, POSCAG, ACARS, JVFAX, and the
like DO NOT USE THE UART OR BUFFER!!! They are using the COM port
ONLY for the electrical interface and DSR status bit. For all
intents and purposes, you could use one of the LPT lines or game
port lines!

All these programs *only* read the DSR status bit. They "time" -
with the system timer - how long DSR is high, and how long DSR is
a low. That's it! The "bits-to-bytes" ("UART") conversion is
done in software.

It does not matter if you have an "older" 8250 UART, or a fancy
new 16550 with a 32K buffer, because that stuff is not even
touched. You can *still* use the same serial port to send data at
the same time (minus hardware handshaking). Trunker has this
ability.

This is why the system timer accuracy is so critical. At 4800
baud, timing is getting rather tight. Windows may drop timer read
requests if it is "busy" doing something else. DOS does not do
"anything else" at the same time, so the program has complete
control over the timer (and the system).

Personally, I prefer the programs written in DOS. I run all these
programs on an old 286/12 GRiD laptop. I don't want to run my
Pentium machine all day just to catch a few comms. Lower speed
machines also spew less RFI in the scanner-bands than do their
high-speed Pentium counterparts.

There may be technical reasons for the programmers choice to use
DOS, and not just because they are "lazy". The software "timer"
in Windows is not as "reliable" as the hardware timer in DOS -
and that timer is the critical "component" in these programs.

Windows programs are also more complicated to compile than simple
DOS. It is easier to "prove" a concept in DOS, then migrate to
Windows once the concept is proven.

The source code is there. No one is stopping anyone from creating
a Windows version.

Take a look at the Motorola MC3362/63/67 series (and Application
Note AN980).

Or the Philips NE602/604 (and Application Note AN1993).

All of the above are good to 200MHz.

Sorry George, I see one of the masters of crap posts whining about his posts being canceled as a non-issue.

What do you mean by *serious* trouble? Like a $5 fine or something?

Contribute something meaningful? I have become callus to anything of use on this NG because of two people in particular waging their
idiotic keyboard war trying to determine which one of them has a degree from the Sally Struthers school of VCR repair.

I find myself particularly partisan against Cheek because I was stupid enough to sign up for one of his "Beta" tests on the PRO-43 and send him a few bucks for the plans.
I was full willing to do the test and report any and everything I found in the test. What did I get for my money? NOTHING. He never sent me the plans.
Not even a postcard. I would have been better off sending the money to the government to help pay of the debt. I wonder how many other people he screwed out of a few bucks.

Sorry for the sarcasm. I'm just a little fed up with the two scanner gods right now.

Tyler

Nextel quoted me $47/mo per radio plus $0.10/min for air time. I'm
presently paying $19 per radio flat. I can't justify the big price
increase but thanks for the post.

>already. Hope this is helpful.
>
>Greg Knox
They gave me a base, mobile, & handy talkie to try. They mounted a mag
mount omni antenna on my roof for the base and mobile. Reception
doesn't seem to be as good in general compaired to when my 800 mhz
system is working good but I haven't had any drops or static problems
& my biggest dead spot disappears on the 400 mhz system. Will the fact
that this is a temporary installation negatively affect performance?

I thought both of these systems were FM. The 400 mhz has a lot of
background noise & my 800 mhz frequently sounds like AM during a rain
storm. Sometimes the 800 mhz is crystal clear with no noise and is a
function of the mobiles location.

I have tried using the 800 mhz radios with the truck engine off. That
seems to help but doesn't eliminate the problem. My mechanic says that
the problem might be the truck tires & static electricity.

What is a 3db gain antenna? No one has said anything to me about one.
The antennas on my trucks look like cell phone antennas and the base
is a yagi.

For the most part,

"From: " (and if in the original, "Sender: ") must match.

"Organization: " and "Reply-To: " don't matter.

It may be possible for sites to modify their news software to conduct
additional checks, but then they'll probably get hit with a flood of
spam since one can only count on the spam cancellers matching the
standard checks.

Tbrutis1 <tbrutis1@aol.com> wrote:
>I'd like to know what gives them the right to decide what's posted here & what
>isn't?

Let me tell you a little story about a newsgroup and silence...

Many years ago, there was a teensy little newsgroup which was highly critical of what some claim to be a religion. Eventually, some lawyer for that religion decided to send a Usenet RMGROUP and have that newsgroup removed because it was critical of the organization she represented.

It didn't work... five to ten newgroup messages were issued in response and many ISP's then disabled automatic rmgrouping.

Usenet members who until that time hadn't given a rat's ass about that newsgroup, joined the newsgroup, and the swell in readership took the newsgroup from 5-10 posts a day to over 100 posts a day.

Then agents for the religion (loosly speaking) started issuing cancels for posts in that newsgroup. Once again the the readership swelled in that newsgroup, to where that newsgroup got 300 posts a day. That didn't stop the cancels however, and an ad-hoc group was formed to track down and quash the cancels at the source. I was one of those hunters. We tracked the canceller from ISP to ISP, usually getting the account closed within hours of when it started issuing cancels, although there had been a few ISPs where the owner/operator was pigheaded and accused us of libel for claiming that cancels were coming from his site. (and we had hell of proof) In those cases, we took it to his upstream provider and the issue was dealt with. Eventually we put an end to the actions of the "cancel-bunny", although without the satisfaction of learning the identity or getting charges filed.

The interesting thing about the above story, is that among the folks who joined the newsgroup in the battle for free-opinion, included folks who were foes of one and other in other newsgroups where issues of PGP and government control were discussed. ALL of these foes joined the same side in what they felt was a battle against a greater danger, and that danger was of someone else deciding who's opinion is important and who's is not, for the good of everyone.

The cancelling of "Mackey" threads is only the tip of the iceberg. What if some Southern local sheriff see's the cancelling see's the blessing of it by some, and figures "Gee, it must be alright to do it for The Greater GOOD" and starts issuing cancels for articles mentioning the frequencies his department uses? Or Disney, coming online and cancelling articles listing the Disneyland frequencies? Where do you draw the line...

or for that matter HOW do you draw the line when you are defining the line
by what YOU feel is important.

>Must think they're related to Bil Gates.

No. Helena Kobrin.

lots of stuff. it's probly the best range for scanning. and easy to find out just get a scanner that covers that range and do a 5 MHZ at a time search. Just for starters ya got th 220 mhz ham band or whats left of it. ya got keyless entry systems and garage door openers at about 319 MHZ. ya got Mil aircraft in th 300 Mhz range, satelites all over th place (th spy ones wooooo). lets see there's ch 13 tv at 216 MHZ or something like that. gosh it goes on and on. But the amount of activity depends on your location.

Robert (blade1@home.com) wrote:
: "Quality" is a relative term, however in your price range I would
: considert a used Radio Shack Pro-2030, an excellent performing 80
: channel scanner that can be had for less than $100.00. When available
: many pawn shops will sell these for less than $75.00.

The 2030 is a reasonable choice for a first scanner.
80 channels can be limiting though in some areas though.

: One side benefit if you are so inclined, is that the 2030 can be
: easily modified for full coverage.

Not necessarly-check the date code first...5A4 or later, then forget it.
Of course, imaging should get some of the blocked stuff, and a virtual
downconverter mod might be possible.

Quick & Dirty Data Interface
============================

Designed by: Some guy in a basement

Jan 14, 1998

This interface is functionally identical to the unit described in the
PD-20x literature. It uses less parts, and it's small size allows it
to be built around a sub-miniature earphone jack inside a hand-held
scanner, or enclosed within a 9-pin gender changer case.

The designer has tested it with 2400 baud POCSAG; it has not yet been
tested with MDC-4800 or Mobitex. It must be used with the scanner's
discriminator output.

As of this date, I have not personally tested this circuit.

Send feedback to

5774. FS: Uniden BC3000XLT handheld scanner - LNIB - $290 shipped

Newsgroup: rec.radio.scanner
Date: 1998-02-21 00:00:00 UTC
From: bodoh@dakota.net
Message-ID: <6cl81j$a2u$1@server2.dakota.net>
Source record: 169830
Cross-posted to: rec.radio.swap,rec.radio.scanner

For sale: Uniden BC3000XLT handheld scanner (current Uniden top-end model);

Coverage 25 Mhz to 1.3 Ghz (minus cellular and 550-760)
400 channels in 20 banks
300 ch/sec search, 100 ch/sec scan
10 priority channels
automatic search and store
selectable (AM/FM/WFM) modes (receives TV and FM broadcast audio)
selectable attenuator
data skip (skips over data channels)
WX key
typical features such as lockout, battery saver, selectable search steps
built in nicad
triple conversion

This radio is in 'mint - like new' condition, with; box, manual, duck, AC adapter - even packing materials! Also included is the optional leather case. Note that for those hung up on cellular reception,it reportedly receives cellular images clearly from 1005 to 1030 Mhz. This radio is one of the best at rejecting overload and intermod. The 20 banks, search store feature, TV and FM broadcast reception and leather case make it ideal for travel. Reason for selling: Have two and need cash.

My price is $290, paid in advance by postal money order, I pay your choice of UPS or USPS shipping. No trades. Lower 48 USA only. Please Email with questions...

Tom, N0YGT

I have a Relm Hs-200 and thought I had the local tone code in for the 2 PD channels, But it seems there are a couple of cars that are on a different tone code still! Does the Motorola system allow multiple tone codes? If so, if I put in several codes.... when a radio transmits I may blank him out (w/ right code)but won't he still come in as White noise on the same freq w/ dfferent tone code? please help me out here guys!

> Any personal experience would be welcomed. Thnx.

I personaly would not spend the money to get cell phone unless u have a lot of wastefull money sitting around. I live in dallas Tx and I hardly ever listen to cell phones. There are some good things to listen to but by the time you spend all day looking and listening you are to tired to even listen. A lot of what I hear are as follows

1. Hey honey I am on my way home with groceries come outside and help me take them in will ya.
2. I am hear at the house and your realator didn't show up so I am leaving.
3. Mom can u pick me up something to eat on your way home.
4. What club are yall at are yall coming out this way.

these are not the greatest things in the world but after you hear them all the time you just don't listen anymore. I am not trying to say there is nothing to listen to out there but a lot of it boaring in my opinion. You can go buy a Radio Shack scanner for about $199 and have cell coverage on it. That is what I scan with and I have no Problems.

I tried to change the speaker in my Pro-43 and I broke it and it didn't have any audio. I had baught a TSP which is a tandy service plan. It covered anything that went wrong with my scanner. I took it in and told them that I had no audio. I didn't tell them that I was trying to change the speaker. Two weeks later I got my scanner back and I looked on a sheet they gave me of what the did and they put on there that they changed the speaker from the original to an upgrade and I was not charged for it. I was happy but note that you will see a slight change in the batterie life. HOPE THIS HELPS

COME CHECK OUT THE NEW SCANNING CHN I HAVE OPENED UP IRC.DALNET #SCANNING

I have no use for Cheek, either, but I refuse to be a proponent of
censorship for any reason. As long as Cheek does not violate the
Terms Of Service at his ISP, he has the legal right to post here.
It's a trivial matter for you to skip his posts if you don't want to
see them.

If you censor him and Mackey, who's going to defend you when somebody
starts cancel ling YOUR posts?

The price of freedom is eternal vigilance.

> say "KMA". What does KMA mean? If anyone knows, let me know. Thanks.

Note the last names, and you'll probably find that "KMA" means
"Korean Male Adult". Similar to HMA (Hispanic), NMA, WMA, etc.

Cheers,

Hi; since Grove has decided to sell its ISP, as of right
now, the ACARS list has moved to qth.net. So all subscription
requests, unsubs, ect. should go to:
majordomo@qth.net

Any ACARS-related traffic should now go to:
acars@qth.net

Please make this adjustment in your email programs.
Thanx es 73s Mike ka3jjz@erols.com

I have the following items for sale. General terms of purchase are:

All items are sold "as is", with no implied warranty. Payment shall
be made prior to shipping with postal money order, cashiers check (or
personal check with appropriate clearance period). COD arrangments
will be considered but are not to be assumed. All prices include
shipping costs unless noted. Shipping from Columbia Maryland area
to US Lower 48 by FedEx unless buyer prefers other (US Post, UPS).
Items may be withdrawn from sale at anytime without further notice.

ICOM R71A
Original owner
Purchased Dec 90
32 Ch Scanning Communications Receiver
100KHz to 30MHz
AM/SSB/FM
This unit does not have PassBand Tuning
(10Hz tuning step eliminates need)
with IC EX257 FM Demod
with IC RC11 Remote Controller
with IC UX14 CI-IV/CI-V Converter
with IC SMR71A Service Manual
with original box, packing materials and documentation.
Unit is in excellent condition.
Spent most of time in ventilated cabinet away from dust.
Price: $550.00

for more details see

http://members.home.com/malmberg/r71.htm

ICOM R1
Original owner
Purchased May 91
100 Ch Scanning Hand-held Communications Receiver
100KHz to 1300MHz
AM/NFM/WFM
with IC LC57 Soft Case (showing wear, but has protected unit)
with IC 150-FA430BB 430MHz Antenna
(this antenna has smaller profile than stock antenna)
with original box, packing materials and documentation.
Unit is in excellent condition.
Spent most of time running from AC
(battery discharged approx. twice per month).
Early production unit of this model. This radio does exhibit
poor selectivity, but size is astonishing (especially seven years ago).

Unit will perform well even in crowded RF environments, however,
selection of key frequencies may be necessary, especially if near
transmitter sites. Unit is continuous coverage 100KHz to 1300MHz.
Price: $300.00

for more details see

http://members.home.com/malmberg/r1.htm

BEARCAT 101
Original owner
Purchased Jul 76
16 Ch Scanner
30 - 50, 146 - 174, 416 - 512 MHz
with extra schematics received from Electra.
with original box and documentation.
This is the first synthesized scanner produced by Electra.
Stored in original box. Unit has been operated a few times
for several hours in past 10 years. Appears to be failing
to lock onto frequency on some channels. 154, 162 MHz
regions appear good. Does not appear to accept new programming
throughout tuning range. Several channels no longer scanned.
Price: $100.00 (shipping NOT included)

for more details see

http://members.home.com/malmberg/bc101.htm

BEARCAT 100
Original owner
Purchased Jan 82
16 Ch Scanner
30 - 50, 138 - 174, 406 - 512 MHz
with extra schematics received from Electra.
with case, antenna, AC adapter.
with original box, packing materials and documentation.
This is the first hand-held synthesized scanner produced.
Unit has been operated primarily on AC with battery cycling
approximately every other week. Due to poor case design,
a re-inforcing plate was fit to bottom (made of black plexiglas).
Price: $100.00 (shipping NOT included)

for more details see

http://members.home.com/malmberg/bc100.htm

REGENCY ACT-E 16 H/L
Original owner
Purchased May 74
16 Ch Scanner (crystal based)
30 - 50, 148 - 174 MHz
(peaked for center tuning at 39 and 154 MHz)
with original documentation.

16 channel crystal based scanner. In excellent condition.
Has been stored for last 10 years. Comes with 8 crystals.
Price: $50.00 (shipping NOT included)

for more details see

http://members.home.com/malmberg/acte16.htm

Blake,
If you`re waiting for Mackey to meet ANY challenge, you and I (&
everyone else) will die of old age. The man (and I use the term loosely)
is a first-class Liar & fake. The only thing he`s good for, is a good laugh
every now and again, watching him wiggle out of one lie, into another.

Have fun with `em.

Charlie

Hi Mike,

you want to post the same question to rec.radio.shortwave.

I purchased a frequency directory from Cambridge Airadio Services back
in 1986 and it still seems to be fairly current. The last know address
that I have from them is:

Cambridge Airadio Services
89 Massachusetts Ave
Suite 486
Boston, MA 02115

The name of frequency directory is:

Worldwide Air Traffic Control

Frequency Directory
For
2-22 Nhz Shortwave Radio
second edition

Hope this helps.

Bob

5810. Re: comparison of most trunked radio systems

First let me say I've always been impressed with Johnson trunking, and have heard good things about GE. But I must comment on your apparent experience with Motorola.

>>"fail soft." The local motorola system goes into fail soft once a week or
>>so. When the system goes into fail soft, which is when the computer
screws

This is unbelievable, you should lodge a complaint with Schaumburg. Since 1991, our system has been in failsoft maybee 3 times, only after a lightning strike. The county next to us has a
multi-site simulcast system with over 100 bases, and has similar preformance. (both these systems are privately maintained)

>>and get there first. It usually takes the local Motorola shop a day or so
>>to diagnose the problem and repair the system

Unacceptable. With a minimal amount of spare hardware and a motivated service shop, trunking should be restorable in a matter of hours under any conceivable circumstance.
Again, you should contact Customer support and lodge a complaint.

Has anyone else out here ever heard of such poor performance in a Motorola trunk system?

I'd be amazed,
Sean

to attach wave file on last one)":

> hi all
> im just wondering if anyone can tell me what kind of tone this is i
> recive these tones on LA county sheriff Freqs. any help would be great

Sounds like it's a "boop...boop...boop" to me.

Only kidding! It's does sound like a beacon tone, but if it's on
a police frequency, I doubt it. Let's toss some thoughts around-

In my area, usually on weekends, or when there's going to be a
DWI checkpoint, the police key a transmitter on a frequency a few
hundred hertz away from their actual conversation transmit freq.
All it transmits is a dead carrier. What happens here is, any
scanner locks onto that freq, and you sort of have to manually
bypass it, that is, if you're in a search mode. This way, it's
frustrating to follow any conversations, while it keeps locking
on this bogus freq. If you lock it out, you'll lock out one side
of the conversation...one freq for base-car, and another for
car-base; it's just that one of them is locked open.

It also sounds like a tracking signal, the type used to
triangulate position. Maybe the base can track the position of
the car?

It depends on what police dept. you're listening to?

> Is this a random selected frequency or some designated frequuencies ??

It's going to be a designated frequency the the dept is licensed for.

> Has anyone figured this out yet??

It depends on what police dept. you're listening to? You need to be
a little more specific.

Hello all,

I have recently relocated to a city where all of the "public safety" operates on a city wide trunking system. As I said, this is all new to me. This includes all major suburbs - far as I can tell, fire, EMS, and police all are on this system. I have done some reasearch, I do understand what trunking is, and mostly how it works, I do not, however, fully understand the "new" Bearcat scanners 235XLT & 895XLT. Are they able to follow these trunked transmissions clearly? And, can I still program and scan other non-trunked frequencies, (i.e. airports, misc. transportation, private security, etc...) at all/or at the same as I scan the trunked ones? Are these two BC scanners the only trunked trackers available - or are there other brands? And finially, what are approx. costs of these 'new' trunk tracker units, and where can they be purchased?

I'm assuming that this 'upgrade' would be necessary, if I want to be able to scan my new city??

Any and ALL help/input would be most valuable - I'm sorry if this has already been discussed to death, or seems a very amature type post.

Feel free to email me privately at j.c.w.@ix.netcom.com

Again - THANK YOU ALL VERY MUCH!!!

JC Woodard

It's not random, they have to go to a freq. that their dept is licened
for. You have to check an FCC data base to find out all the freqs. they
are allowed to use. Sometimes in the smaller cities they can legally
call an intercity freq. or an interagency freq. their #2 or #3 channel.

I dont know about America but Here in Australia If you compare the bandwidth of frequencies on a radioshack to a bearcat, the best price would have to be the Uniden BEARCATS. I have a 2500xlt with a bandwidth covering 25 - 1300Mhz only missing out 520-640Mhz (something like that) and the radioshack model for the same price has got 68-88, 118-174, 380-512, 806-960 which is missing quite alot. The sound of the bearcat is quite good compared to the radioshack but their ok.

Steve.

May I point you to an excellent manual for the MVT-9000 written by Rich Wells N2MCA. You can download it from his site:

http://www.qsl.net/n2mca/RADIO.HTM

He says that 'units shipped for sale outside of Japan do not come with the PRESET feature.Unless you purchased your radio in/from Japan your radio will not have this feature.'

You can enable/disable preset by using either FUNC + MODE or pressing STEP and then turning the rotary control or the arrow keys till you see PRESET in the window.

I bought a scanner from them and would do it again. The fact that scanner could be confiscated is completely irrelevant to whether Bandercom is a good company or now because it is the US government that determines what is permissable and what is not.
Bandercom is one of only 2-3 companies that say they will guarantee delivery of an item that they sell, and even if confiscated, they say you will not be left holding an empty bag. I haven't put that to the test, but you can contact the company and arrange things for yourself.

Chevy,
Great year. Had a 69 Nova with 427ci.
Now, on to scanning. Yes, 43Mhz is cordless phone. The 25 ch. phones start at43.720, up to 44.480 for the base. Then the older phone freq`s of 46.610 to 46.97 are added to make up to 25 ch.

Happy Scanning,
Charlie

The PRO-26 is a nice radio. While the audio is not stellar,
that's no reason not to buy this radio which does so much
at today's bargain prices.

If you have web access and are interested in reading my
review of this radio, point your browser to

http://www.qsl.net/n2mca/PRO-26.HTM

And you are probably referring to "Trunked Systems" which
are multi-frequency, computer-controlled radio systems.
To read more, try my New Scanner User FAQ listed in my
signature.

Good luck!

Try my New Scanner User FAQ listed in my signature.

It would make sense to buy one if there are trunked
systems in your area you would like to monitor
efficiently. And the TrunkTrackers can not handle
all systems...mainly those made by Motorola which
are 800MHz(not 400 or 900MHz) and analog(not digital).

Aside from the trunk-tracking ability of these radios,
this technology is using a new receiver from Uniden
which is top-notch. Especially the BC895XLT.

That is the busy signal that indicates a mobile is talking, and the
repeater is shut off. The same tones were used on the old 39.xx MHz freqs
as well.

BTW, the tones is a Beep.....Beep....Beep.... if you can't decode the binary...

Depends on who gets the contract.
If Louisville Two Way gets it you will be able to track it unless they
go digital which I can't see the expense.

If for some reason RadioLand or whatever Lytle's shop is called now
got it they would sell a GE system that can't be tracked by the TT.

> 30MHz to 960MHz scanners!

Mike,
Unfortunately, what you're seeing is largely
unavoidable.
You are using a double-conversion radio which
are much more susceptible to overload by strong,
local signals.
The fact that you are on a hill might be
causing even more problems since you might
be elevated above obstructions which might
normally help to block and/or attenuate such
signals. As it is, you might be putting
yourself in the line-of-sight of more
VHF/UHF signals.
You did not state whether you were
using a stock, enhanced or external
antenna. If you are using an enhanced
or external antenna, this is more than
likely making matters worse since they
are providing more and stronger signals
than you would be getting with the
stock antenna.
The antenna used also helps determine
what kind, and the strength of, signals
that are received. Antennas will
naturally pick up some frequencies
better than others. Your goal would be
to find an antenna which does not
pick up signals in the interferring
frequency range very well. Or in other
words, build some antennas which are
tuned for the ranges you like to
listen to, provided they are not
near the frequency range which
contains the offending pagers. Many
of the larger bookstores carry some
good texts on building antennas which
can be found in the electronics or

technology sections usually near the
TV repair books.
You can buy filters to help block
certain ranges but they are typically
costly($50-$100) for the ranges you
would want to block. Of course you'd
first need to identify which freq
range the offending signals are coming
from so you'd have an idea of which
range needs blocking.
Also be aware that some pre-amplifiers
come with attenuators which will weaken
signals helping to alleviate the overload
and subsequent intermod. Such models
typically run in the $80+ range.
Depending on how bad your situation is,
you might wish to sell the PRO-2039 and pick
up a triple conversion radio. While this
probably won't solve your problems, it will
hopefully make them much more bearable. And
if you do, consider picking up a model with
a built-in attenuator.
Good luck!

Strong signals,

The Ericsson system in Miami-Dade County Fl. is a nightmare. The county police and fire have had so much trouble with ericssons EDACS system that the fire chief went back to the old 450mhz non-trunked system. He called the ericsson system a danger to the public and the firefighters/rescue people.

On the other hand, the cities of Miam and Miami Beach, Fl. use Motorola type 1 and 2 and have virtually no problems with it.

Dear Steven M. Geisler:

As the proud owner of the "Original" Electra Corporation Scanner Crystal
Bank, I
am happy to inform you that I've got thousands (best guess) of those rocks
laying
around the factory.

"Original" is a double edged sword; the rocks are of course correct for
Bearcat Scanners,
from CTS Knights and Tedford(CINOX), however, they are anywhere from 15-30
years old,
and they certainly tend to age - crystals in solder seal cans seem to
invariably shift downward
in resonant frequency, although typically only 1-3 KHz at the channel
frequency - not enough to
seriously degrade reception within the IF bandpass window.

If in stock - I'm trying to sell these for oh, say $6.00 each - roughly
half of what they cost
to make new. When ordered, we check stock, fire up our nifty Saunders
Crystal Impedance
Meter and 0.1ppm Opto Frequency Counter, check oscillation activity level
and frequency,
and if all is well, you got a rock!

Hope this helps you out. If interested, feel free to contact me.
Very truly yours,

Dave Lovell, W9DAG, RF Eng./Pres. Electra Corporation - such as it is.

Hello there,

I have for sale (or trade) the following cellular phone.

Motorola DPC-550 Cellular Flip Phone, it comes with the following accessories:

1. Two batteries, one is High Capacity, other is "Slim Line" type.
2. Car DC power/charge cord
3. Dual OverNight Charger (charges two batteries, and powers phone at the same time)
4. Original Packaging, full ESN/MSN (both are clean) info, original phone #, etc.
5. Phone is in excellent condition!!!! It is virtually new!!! (no joke)

I also have a "Test Mode" jumper installed (which can be easily removed) which enables the unit to also function as a reciever on all the allocated cellular freqs. Lots of docs are included with the phone about this. Price: $65 or trade.
If you are interested, please email me back. Thanks for reading this.

I have just recieved a rather plain looking Uniden bearcat BC60XLT 10 channel 10 band scanner. I am wondering if there are any modifications that can be done with this unit. I have looked all over the web and can't find anything that will modify this thing. Can someone help?

I would be happy to know of any police frequencies for Calgary Alberta Canada since the ones listed in my old frequency list from 1996 are obviously outdated...

Hello. I have a portable SW/AM/FM radio made by International for sale. The radio is in perfect working condition and good cosmetic condition. Price if $40 shipped. If interested please reply by e-mail. Here's all of the information on it:

FEATURES: volume control, built in speaker, headphone jack, band selector, analog frequency display, frequency tuning knob, world time zone map on the back

COMES WITH: antenna, carrying strap, batteries

FREQUENCY COVERAGE: .53-1.6 (AM radio), 5.9-6.25, 7.05-7.5, 9.5-9.95, 11.65-12.1, 15.1-15.6, 17.5-18.15, 88-108 (FM radio), 8 bands altogether

5863. Icom IC-R10 single sideband

Newsgroup: rec.radio.scanner
Date: 1998-02-22 00:00:00 UTC
From: baoltman@wwa.com
Message-ID: <baoltman-ya02408000R2202981358570001@news>
Source record: 169622
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

I decided to explore the SSB capabilities of the R10 this weekend.
This is what I found:

1. When the external battery charger is attached, SSB become useless
due to what sounds like horrendous 60Hz ripple on the injection freq.
I tried another 12 VDC wallwart, but got the same effect.

2. Using battery power, an outdoor antenna and a good ground the reception
was acceptable, but tuning with the heavily detented "dial" is a *REAL PAIN*.

3. This radio cries out for a little better ergonomics, like a thumbwheel
for VFO-ing and some clearance between the antenna volume/squelch knobs.

Imminent domain is a legal theory allowing the state to take legal title to real property against the wishes of the owner if the taking is for the public good and if the owner is compensated. This has no application to Disney World, because Disney World is not a governmental entity.

Here in Canada we can buy 800MHz scanners with and without cell coverage.
The price 'though is about $250 more for the cell-phone capability.
Is the extra price worth what you 'hear'? Is there that much to pick up
when scanning cell calls? What's the most sensitive unit available?
Or should I stick with the cheaper and more available basic scanners?
Any personal experience would be welcomed. Thnx.

> Thanks in advanced,
> Tony Wilson (KC5IPX)

I thought about doing that on my now sold PRO-2026. It had an angled head that required below eye level mounting to see the display, really sucked. The control head was a clean package when I removed it from the unit. I was reluctant to modify it because I wasn't sure if there was going to be a problem with the increased resistance in the longer ribbon cord.

It's a very ingenious idea, I don't understand why manufacturers aren't producing those kinds of units.

Radio Shack sells a center-loaded telescoping whip antenna for around
$10. It will give you somewhat better reception, especially in the
VHF-low band. If you're going to use it in a vehicle an all-band
magnet mount antenna is the way to go. They start around $30.

Now that's mighty decent of ya. But then
I feel the same way.

> If you don't defend the other
> person's freedoms, who's going to defend yours?

Right. I'd hate for anyone else to stifle
you and deny me the pleasure. And if I can't
do it, I dern sure don't want anyone else to
be able to.

That's like capital punishment....I'm dead set
against the government having the power to kill
anyone for any reason other than out and out war.

But if someone molests my kids or breaks into
my home, they've just as well signed their own
snuff warrant. I'll do the dirty work if and
when it needs to be done. But I don't want
anyone else doing it. They might be discriminatory
and/or not as responsible as me.

So you're safe as far as I'm concerned.

Re the exchange betwixt you and the Tyler excrement:

> >That's pretty fucking obvious given the shit you post.
>
> Why do you read it if you don't enjoy it? Sheesh!

He enjoys it. He even gets orgasmic when someone
calls him names and stomps him. He likes pain.
You know the kind..... That's why he acts like
a little peckerwood out here in public....so as

to entice people to molest him.

> [massive snippage]
>
> Here's another free clue: Learn to edit.

He's an idiot savant.....not capable of learning.
He and that more prolific nitwit were born Siamese
twins with a shared brain. They were separated
with the brain going to the other nincompoop, but
that brain died. Yet both bodies lived.

They put a trap-door in Tyler's skull cavity
for him to keep extra snotrags and nerve pills in.

It's considered a miracle in the annals of medical history.

Se la vi.

Toodle-loo.....

Don't take any wooden nickels. Watch your topknot.

Hello all,
Can anyone give me some insite into the 9000 XLT? I'm looking fo a continous coverage scanner. This looks pretty good. Uniden has got my business before with their CTCSS boards for scanners,which I need in the heavy transmitter area I'm in. Can't believe that more scanner makers don't add CTCSS to their scanners.

Also does the 9000 XLT have the computer connection/programming features of the 895 XLT? Don't see any mention of it in the material I have in front of me.

Any help would be greatly accepted.

Frank,
If you install a OS456 into your cellular capable scanner,
you will still recieve cellular.
The 456 uses the scanners CPU.Unlike the
OS535 that uses the CPU that is onboard the 535.
Hope this clears things up.

There's an empty connector originally intended for a extended frequency
converter. It is not shown on the schematic. If you ground pin 14, the
readout will program from 0 to 999 MHz.

I hooked a 6.8K resistor from UHF1 to UHF2 on the band unit. This enables the
existing front end
to run in the 905-999 frequency range.
Mine worked up to 925 before the oscillator went out of lock. I expect you
could tweek the insides
of the front-end module to shift the range up to get to 950.

If you want lower frequencies, the radio is set up to tune 0-20, 20-40 and
40-60 MHz. with a 73 MHz
first IF. All you need is three VCOs, a couple of mixers and an oscillator to
mix the 73 down to 10.7.
If anyone has implemented this board, I'd be interesteed in the results.

DISCLAIMER: I HAVE NO INSIDE INFORMATION. ALL THIS WAS DETERMINED FROM
REVERSE-ENGINEERING ONE UNIT. MY DESCRIPTION MAY CONTAIN ERRORS. YOUR
MILEAGE MAY VARY. PROCEED AT YOUR OWN RISK. I AM NOT RESPONSIBLE
FOR YOUR BROKEN RADIO.

...
> because Disney World is not a governmental entity.
Uhhh, believe it or not Disney World IS a governmental entity.

The city of Lake Buena Vista Florida (AKA the various Disney Properties) is
a city recognized as any other city in the state of Florida. This was in
the news several years ago when Lake Buena Vista was the only city to apply
for, and receive, state grant money for public works projects. Tax payers
were a little POd when the found that their sales tax money was going for
infrastructure improvements at Disney World.

I doubt many amusement parks enjoy this unique arrangement.

> hobbyist.

That's the whole point of why I wrote the article. I've always been amused
at why people are so afraid of using a TV antenna for scanners. The antenna
is metal, resonant, and, after remounting, possesses the correct
polarization. It's not like the 160 MHz radio wave comes flying past your
modified TV antenna and says to itself, "Oops, that's a TV antenna, I
can't go there." The radio wave doesn't know the difference.

The present controversy reminds me of the controversy about TV antennas
in the early 1960s. The early antennas used clear anodizing coating and
had a silver color. When color television broadcasting began, the
manufacturers switched to gold anodizing and sold them as "color
antennas." At least in Phoenix in those days, there were a few stations
transmitting in black and white for a while. Again, how did the television
signal know if you had a color or black and white antenna? Same thing with
scanner use. It's metal, resonant, and correctly polarized. Use it!

> Again, good piece, good ammo for the often asked TV antenna questions.
> Maybe it is time you started the R.R.S. T.V. to Scanner Antenna FAQ. :-)

Thanks for the nice feedback. I'll periodically repost the article for
others to use.

Hi colin,

I have been working today on a version that will automatically resize to the desktop size. I will post the new version as soon as I get it working. It's been very hard to get that part of the program working due to my lack of programing knowledge. I have not programed in 10 years and just got back into it. Don't worry... the newer versions will support all the screen resolutions. I have also added a maxhold function that will keep the max peaks stored in a trace. This is useful if you leave the program running overnight to check propagation beacons etc. I also plan on adding dataloging. Right now the main objective is getting the program to support all the screen resolutions.

> What about 25 to 50 MHz?

I've never measured a TV antenna for the 25 to 50 MHz band (one of these days :-)), but it will work. Objectively, I don't know how *well* it would work, but it's metal and will have a little directivity at those frequencies. Subjectively, put it up and use it! It's going to work at least as good as a discone and you might get a little directivity to boot.

In my personal opinion:
I would prefer a 465.***MHZ radio over a 800 MHZ system... While they are both line of site systems...the hieght of the antennas and line of site really affect performance...I have found 465.***MHZ to be a bit better in my personal experience and the area my business works in. Our company has actually dropped both systems and gone to a NEXTEL system using Motorola/NEXTEL units, these are more like cellular phones than repeater radio systems...With them we have unit to unit (truck to truck) (Truck to base) vs versa, every radio logs into the network, you can also go into phone mode and use the radio like a cell phone, we also have email, so our dispatch can send jobs and messages to an individual or a group of people. We also can access voice mail, we have alert features, so if one of your guys is not by his radio when you call him, he will see your name or unit number on his display, send him an alert and his radio beeps every few seconds until he calls you back. Email also has a mail alert tone. Since

the radio works in Cells, and the cell intrastructure for Nextel in our area is very good, it is by far the best business system we have ever used.

If you can not go to this system, I would go with the 465.*** MHZ system, though this may have dead zones in low areas...it may not be as bad as the dead zones you can get on a higher frequency system. Of course this all depends on the area you are in and the location of the tower(s). In my personal opinion we had more problems with the 800Mhz system where we used them...The 465.***Mhz system we were on seemed to have less dead zones, but anyone with a scanner could monitor us, and we had a few dead zones down by the river. the best system by far is the Nextel/Motorola system we are now on. I have only seen the network go down 3 times when fiber optic lines connecting the network was cut. If the network goes down, your communications are dead on this system, not even truck to truck. With a 465.*** repeater system, if the repeater goes down, you still maybe able to talk direct between units (Simplex)...
They all have their pros and cons.

All this is just my personal opinion. I have worked in the service industry for 16 years and have used these 3 systems. I am also a HAM radio operator and have a good bit of experience and understanding of RF. I am just telling you what I think. What may actually work best for you may differ from my experience. All 3 systems when they are working work well. Also, I might add, I am assuming the 400 MHZ system you were talking about was a repeater system and not a trunked 400 Mhz system. But even if it were, I would go with the lower frequency, unless they have one really good 800 MHZ antenna/tower set up that gives you excellent covereage.

What would be great would be if they would let you test out the system before you buy.:)

Good luck

5938. relm handheld scanner?

Newsgroup: rec.radio.scanner
Date: 1998-02-23 00:00:00 UTC
From: gary.saffer@channel1.com
Message-ID: <40.84015.2433@channel1.com>
Source record: 169470

S>I was wondering if anyone owned the relm handheld unit that did had
S>I CTCSS/DPL? could use a handheld with these capabilities and this
S>seems to be the only one made that has the PL. Regency has always
S>been a good company, but I'm not sure if Relm has followed. Any
S>information would be greatly appreciated. Thanks in advance.

The HS200 is a great scanner. I am attaching a review that I did when I first got mine, in November of 1996. It's not perfect, but it is very, very, good.

Gary

I've lived with a RELM HS-200 for several months, and thought I would share some of my observations, since this seems there seems to be a bit of interest in reviews of the radio.

The Relm is the best handheld scanner that I have ever owned, and I have owned lots of them over the past 20 years. This includes HX 1000/1200/1500 radios, two BC 200XLTs, and numerous crystal handhelds. In addition to a very sensitive and selective receiver, it has lots of user friendly features.

The radio has 200 channels in 10 banks of 20 channels. The display is fairly large, and relatively easy to read. Programming is pretty easy, even without the manual. The scanner is fairly small in size, but has keys that are easy to see and use, with good spacing between them. Despite it's small size, the scanner has a solid feel, not cheap or toy like. The top controls are easy to use, and their are three of them, volume, squelch, and channel. The channel selector can be used to stop scanning, step to a channel, and program in the CTCSS or DCTCSS. This is useful if you know a particular tone frequency, but don't have the manual with the conversion chart. The radio has pretty good volume for a portable, and can drive an ear phone or external speaker quite easily. External power and speaker jacks are on the side so you can lay the radio down, or stand it up to use it without a cord getting in the way. The radio uses regular AA batteries or NiCads and can be recharged while it is running. Battery life seems good, again, as a subjective measure. It will also work from a cigarette lighter cord. To my ear sensitivity and selectivity are excellent. The stock rubber duck works well, and seems to be pretty rugged. Add an external antenna either in a car or at home, and the range is terrific.

There are a few of things that I don't like about the radio, some minor, some more important. Here they are.

1) You can't turn off the damned beep. Come on RELM, this is silly.

2) There is no way to put the display light on for more than three seconds. Again, a silly oversight.

3) The delay, following long established Regency/RELM practice, is all or nothing, not selectable by channel. In a radio of this type, this is almost inexcusable. No, it is inexcusable. After all, every other scanner manufacturer has this feature, why has Regency/RELM never done it?

4) No trunk following. Okay, who knew Uniden was going to do that? Maybe RELM will license the technology for future versions. That's if Uniden will sell it.

5) Perhaps the most annoying. No way to search for CTCSS or DCTCSS. You can search for frequency, but you can't search for tone. That makes no sense, especially when you consider that it is harder to find tone information than it is to find frequency information.

6) Display could be bigger.

7) Computer programming would be nice. And while we are at it, an Alpha display would be nice. At my advanced age, it's tough to remember almost 200 frequency assignments.

8) The channel selector knob tends to fall off, and should have a set screw instead of pressure fit. (RELM has revised this, and if you have a problem you can call them and they will send out a new one.)

None of these would make me not buy the radio. At the relatively cheap price of about $250.00, it's a heck of a scanner.

> able to follow these trunked transmissions clearly?

They sure are! As long as they're a Motorola, 800MHz, analog system.

> And, can I still
> program and scan other non-trunked frequencies, (i.e. airports, misc.
> transportation, private security, etc...) at all

Sure can.

> or at the same as I scan the trunked ones?

Can't do that. You are either in trunking mode or not. And if
you're in trunking mode, you can only monitor one trunked system
at a time.

> Are these two BC scanners the only trunked
> trackers available - or are there other brands?

There are two others offered by Radio Shack but they are
made by Uniden and are copies of the BC235XLT. There is
the PRO-90(handheld) and the PRO-2050(base).

> And finially, what are
> approx. costs of these 'new' trunk tracker units, and where can they be
> purchased?

The handhelds can run around $250 while the base stations are
about $330. If you want a handheld, the BC235XLT is a good bet.
For a base unit, go with the BC895XLT. An excellent unit, even
if you don't consider its TrunkTracking abilities.

As for dealers, there are several and it will be up to you
to do some price shopping for the best deal. You can go with
Communications Electronics, Lentini, Advanced Digital Systems,
Grove and Scanner World are all good places to start with.
See my Scanner Dealers FAQ for more info

http://www.qsl.net/n2mca/DEALERS.HTM

> I'm assuming that this 'upgrade' would be necessary, if I want to be
> able to scan my new city??

Depends on how big it is...how many channels, how many agencies, etc.
For small systems, you can get by with a regular scanner but it is
inefficient as the conversation hops around on different physical
frequencies. If the system is any bigger, it's nearly impossible
to follow.

Best of luck in your decision and feel free to e-mail me if I
can help answer anything else.

Strong signals,

>every time I'm there.

The pay scale is either hourly or commssion. You are "guaranteed" to make at least the minimum wage, but if you sell over a certain quantity per hour, you get commission on the total sales for the day. (I think you have to sell $90 per hour to get commission).

5942. Re: Tone Code Question!

First, we need to determine which 'Tone Code' you are referring to,
because that will change the answer to your question.

The Relm HS-200 supports four 'tone code' options. PL CTSS DPL DCS.

The most common is probably PL(Private Line) that consists of about 32-38
(depending on whose implementation) subaudible tones that are transmitted
along with the signal. These tones range from around 67.0 to 250.3(I
believe) hertz.

Is this what you're talking about? Which Motorola system?

: program for CTCSS. I have already done the necessary modifications for
: CTCSS. Any help would be appreciated.

: Thanks,
: Wes

I assume that you have installed the CTCSS board that is sold by Uniden.
If so, here are the instructions.

- Enable CTCSS so that CTCSS displays in lower portion of display.

- Enter desired frequency and press [E] key to enter it.

- Enter CTCSS code and press [E] key to enter it.

The display should now alternate between the monitored frequency and
the CTCSS tone code entered.

Ref: Icom PCR-1000 issues..

Having used the PCR1000 for about two months, I can give
you the following experiences:

1. The ICOM is the latest technology, i.e. certain 8500 components,
and is, a very sensitive radio. When connected to an amp/speaker
combination it's audio is definitely superior to any shortwave radio
I've had...and I'm ole and retired!!

2. I had a Kenwood R-5000, which was a excellent, solid workhorse
type of radio...and is still considered an excellent radio. However,
the Icom is superior in almost all parameters. The only area that the
Icom came up short was in the IF shift area where you might be
fighting a heterodyne situation...there was more flexibility with the
Kenwood. However, with the upcoming DSP option on the Icom,
I suspect this minor drawback will be removed.

3. Sensitivity across the complete frequency spectrum is outstanding.
It is strong in the AM band...has that type of deep sensitivity
that pull out am stations from afar...and great audio! Seems just
like the fairly recent GE radio that was so great on am! I have an
old GE portable assembled by Mitsushita for GE that was the fore-
runner of the more recent GE radio...(no longer available). The
Am on the Icom is of the same "cut"....particularly with a 50ohm
antenna such as the Alpha Delta SWL 60 footer! In fact the
full frequency spectrum of the ICOM is great on this antenna! Quite
a surprise to me! From Am up through the 800/900 mhz bands.

4. The selectivity issue on the Icom will be addressed with the DSP
addition, I would think. The fact that Icom made the receiver
external to the PC environment was a great move!

Now! After all these glowing remarks...there are some fundamental
steps one must make prior to installing a radio near your computer
system. I've worked on this for years and here are a few hints that
you need to adhere to before sitting any radio in or near a computer.

A. First, get you a computer power supply that is fully compliant with
the FCC regulation in regard to EMI/RFI emissions! If you don't do
this...forget it! You'll never enjoy the radio! Along with this
factor, you need to look very closely at getting one of the newer
motherboards that also adhere to FCC regs regarding emissions
and noise. Abit, Shuttle Hot, are among some boards that pay
attention to this issue. I'm currently using the Shuttle Hot 569...
a very quiet board. There are others that pay attention to this

kind of detail out there! Some video and sound cards are noisy...some cheaper sound cards with inexpensive ad/da converters will emit noise on certain frequencies. The same applies to some video cards...this all has to do with shielding and design of the card itself. I've found that Turtle Beach cards are well designed and engineered in regard to sound cards. I've had good experience with Diamond video cards. I would suspect most of the top sellers are fairly quiet.

B. In regards to the EMI/RFI issue...I went to an Enlight case... it has an extremely quiet power supply and is a joy to use if you build your own PC. It is a quiet case...has some EMI/RFI options you can purchase if you have some noisy cards internally. You probably won't need the little option.

C. Also, a couple of years ago I went to an NEC 17inch monitor. A noisy monitor is probably as bad as a noisy power suppy...or even worse!! NEC has been shielding their CRT's for quite a number of years...the monitor is shielded in a cage...I've had a R-5000 sitting next to mine for years as well as a RS PRO-2035 scanner...dead quiet! Even down in the am portion of the band on the Kenwood R-5000. So, in your process of getting a quiet system surrounding your radio...do give a lot of attention to the crt! Most of the cheaper crt's will whine and scream with RFI.

You might ask, why go to all this trouble? Upcoming, there will be TV and radio functions in all PC's...the issues discussed above will have to be addressed before this can become an enjoyable reality. None of the MMX and Mpeg stuff will be worth a dime if the noise (emi/rfi) issues are not addressed.

Also, at RS there are little Ferrite loops, etc...in the PC parts section, that can be added to filter out heavy RFI a bit from other sources...they just snap around your leads to and from the cables from the PC to the Icom. They did not help my situation, however, other people have said they did help. The better power supplies have these ferrite components built in!! They tend to act like "sponges" in regard to RFI/EMI radiation.

And, a final warning...if you have florescent lights around...it is likely that they will radiate noise in the frequency ranges you'll be tuning! They tend to come and go...making the situation a mystery...they radiate a long ways also, even if you're downstairs and the lights are upstairs...they will still get you! Coffee pots or anything with thermostats...will click and pop you to death!!

I have my PC connected to a "cheapo" Pioneer SX-205 receiver and a pair of RS Optimus PRO-LX5 speakers. There was a "war" between Circuit City and Best Buys last year on the SX-205 ...was selling for $99 at Circuit city!! I bought it...excellent for the money! Also, the little Optimus PRO-LX5 speakers are a steal at the current half price sale at RS. They add to the

intelligibility...and make some of the Short Wave stuff sound quite
good, audio wise! This all works really well with the PCR-1000.

Enough...I've meandered all over the place...hope this helps some
of you thinking about the PCR-1000. For the money, it is outstanding..
probably not yet as good as the 8500...but with a few upgrades
in the future...who knows?

Leonard...

P.S. A final blurb...you can mount the Icom under the edge of your
table or desk (upside down) with Velcro...works quite well on
my table...under the ledge..out of the way, but still puts the
power switch in position and leaves the little speaker open if
you use it! RS has some black plastic tubing to cover all the
wires if want to look neat and professional!

Help, I have an AR 160 and would greatly appreciate any assistance if anyone has or has had one. If you have a operation manual I will gladly pay for copying. I have a FAX if that could be used to send me the info. Lastly, if you have a schematic I would also like to have a copy. I am fairly sure the receiver is working as it will work in the "search" mode and will verify frequency. It doesn't have a numerical display only a line of 16 led's and some indicators silk screened on the face panel.

Thank you very kindly,

Roger

To my knowledge LA County uses a system that uses Low band in the
vehicles and High Band for the Bases 9i may have that backwards.

THe tone you are hearing is on the Base Frequency. This indicates to
other stations that another unit is transmitting (Frequency is busy)
The units in the care Can't hear the other unit Talk.

5953. Bearcat 800XLT IC CHIP Questions

Newsgroup: rec.radio.scanner
Date: 1998-02-23 00:00:00 UTC
From: Tim Havens <thavens@hps-inc.com>
Message-ID: <6cs5pd$9pg$1@usenet87.supernews.com>
Source record: 169500

Does anyone know the main IC for this rig? What it's part number is?
Perhaps a pinout of the chip? I'm trying to get some info for a friend. We
are looking
for something like AGC voltage points, or ALC, or RSS points to try to
create an
analog signal meter.

Help is greatly appreciated. Even if it's just the IC part number...I can
search the Web
for Pinouts after that.

Tim

5954. AOR-8000 from cananda?

Source record: 169501

hi,

How hard is it to get the AOR8000 in canada and ship it to the US?

Or i am looking for a used one.

Also how does this compare with the IC-R1 and IC-R10

What are the used prices?

Is the RS pro-?? (26 I think or 46) pretty good. I want continuous coverage up to 1.3GHz

If say a person is listening to his/her scanner and hear someone talking about a crime they are going to commit. Do you think it is that persons responsiblity to call the police? However if they do turn them in they could get in trouble themselves for listening to freqs that aren't supposed to be listen to.

Is this a Moderated Group??? No, therefore no Censorship

It is my own understanding that in the past Bill Cheek was the moderator of another group, A MODERATED group where it is the moderators decision on the content that is allowed through, that is not censorship in my opinion , that is 1 person doing what he is supposed to do, i.e. Moderate the group. I suspect the only people who had a problem with that are those that got booted from that group.

This group is NOT moderated so who ever is cancelling these posts needs to be found and shut down. But then again you I see work FOR the government who are well known for there attempt to censor the masses when it suits there needs.

Source record: 169526

When you are programming a channel, you hit
enter to save the freq, then enter the CTCSS
frequency in Hz, then enter again I believe.
You know you have it right when the display
toggles between the freq. and the PL freq.
Also make sure your PL is switched on of course.
I forget if you can add PL to a channel w/o
reprogramming the channel. Maybe you just press
enter on a channel to do so, and go through the
same process. Good luck.

> supposed to be listen to.
Frist of all take your first sentence the answere is in it. If you
simply hear
some TWO people talking about something that has not happened then there
has been no crime committed. If the police agency have a legal warrent
to evesdrop/wiretap and determine that there is a conspirecy to commit
a crime then they may want to act.
Next you are quite correct in the last sentence. One crime does not
permit
another crime. Even hearing a private conversation on frequencys other
than phone
frequencys and repeating that conversation CAN/MAY be illegal. :NOTE: I
said CAN/MAY
be. That is so you purest CAN/MAY look it up for yourselves. :NOTE: I
said CAN/MAY.

the point is that lots of people's messages are being cancelled and not just the people you're out to get, but also the people you often defend.

I recently picked up a used pro-51, and was wondering whether anyone might know the specific frequencies for this radio that would pick up images of cell phone frequencies.

I'd like to be sure to lock them out.

Honest.

Thanks.

5987. What is 114?

Message-ID: <34F1E93A.555A@pacbell.net>
Source record: 169534

Last week's discussion of "What does KMA stand for?" raised a question in my mind. LAPD Metro Division headquarters is called 114 on the air. Why? Is it a room at Parker Center? Is it a room someplace else that was Metro's headquarters in the Jack Webb days? Just curious.

The scanner is sending you an "error" message. This is because the frquency you are trying to program is out of the bands covered by that scanner. The Uniden Bearcat 55xlt does not cover the aircraft band 108-136mhz.

Si, esiste il suo convertitore che va fino a 1.4 GHz non costa molto e va
anche discretamente. Io lo pagai 100.000 lire.

Why not just use an external speaker which will bypass the internal
one? Try using an earplug speaker or headphones. You can set
the volume lower and your batteries will last longer between charges.

There was a guy that posted a while back that had a shipment from
Bandercom disappear in transit and Bandercom promptly shipped him
another unit which arrived safely. Apparently they do deliver as
promised.

I didn't say anything about censoring the guy. I went to Penn State where a bunch of N.O.W. babes in combat boots stole hundreds of copies of a small college newspaper that they didn't agree with. WHAT THE HELL IS THIS? RUSSIA?

Then they were bitching and moaning when they were brought before a judge and he threw the book at them.

I just said it couldn't have happened to a "nicer" guy.

453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex
453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.500 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Pennsylvania Department of Transportation (PennDOT)

PennDOT used an old half-duplex (base/mobile) system similar to PSP, but
recently acquired several new frequencies and seems to be using simplex on
them. The list below represents all frequencies assigned to PennDOT.

Listed below is the old system plan. An

47.300B/47.380M 146.2 F-1 Dist. 1,3,6,7,9,11
47.040B/47.200M 136.5 F-? Dist. 2,5,12
47.060B/47.080M 156.7 F-? Dist. 4,8,10

47.280 Simplex 167.9 F-2 Eastern Dist.3,4,5,6,7 & 8
47.140 Simplex F-2 Western Dist.1,2,9,10,11 & 12
47.160 Simplex F-?
47.180 Simplex F-?

151.010 Simplex 110.9 Penn DOT Motor Carrier Enforcement
151.100
159.195

PennDOT Districts

1 - Crawford, Erie, Forest, Mercer, Venago, Warren
2 - Cameron, Centre, Clearfield, Clinton, Elk, Juniata, Potter, Mckean,Mifflin
3 - Bradford, Columbia, Lycoming, Montour, Northumberland, Snyder,
Sullivan,Tioga, Union

Just what are you referring to? Are you suggesting that they
are the ones who are forge-cancelling posts in this news group?
If so, show the proof.

How much of the path is it possible to forge? This looks like it
was routed all over Europe but the logbridge.uoregon.edu might be
useful *if* not forged. Maybe the Postmaster at uoregon.edu(University
of Oregon, Eugene OR)can give some assistance.

The RELM MS200 is made in USA.

See my review in the upcoming March 1998 Monitoring Times.

>port lines!
<mucho snippo>

Paul's info is right on; I just want to add a bit. There are a couple more reasons they all use the serial port connector:
1. They use and critically depend on the ability of the UART to generate an interrupt when the incoming DSR signal changes, on both rising and falling edge. No LPT line has the ability to do that without a more complex interface circuit. Many LPT ports have undependable interrupts altogether.
2. They take advantage of both positive and negative signals on the spare RS-232 pins on the port to provide power to run the opamp in the interface circuit.

As for Windows: Running under MS-DOS, the program has a direct connection to the hardware interrupt. The hardware generates an interrupt request and the program gets notified immediately. In each higher level version of Windows there is more and more system software between that interrupt and an application level program. In WIN32 an application cannot even connect itself to an interrupt in the good old-fashioned way that MDT, Trunker, et al. do.

The data decoding algorithm common to these programs depends on at least consistent times between when the interrupt happens and when they get notified, from one interrupt to another. In a lightly loaded system the delays are small enough that they have been known to work; however, there is no guarantee and you should expect some loss of data compared to running without Windows. This only gets worse when going to Windows 98 or NT.

In Windows 95, the proper solution would be to write a windows virtual device driver (*.VXD) to do the interrupt handling, then modify the application program to call the device driver. That's noticeably more complicated than running a DOS app under 16-bit emulation, and if anybody has written it they are keeping it proprietary.

Considering the FROM Headers, maybe these three cancels
were just a little tit-for-tat. Forging is bad, forge-canceling
is worse but how bad is forge-canceling a forged post?

>How much of the path is it possible to forge?

Honestly? Any and all of it. I'm hoping someone else has copies
with paths different enough to rule out some of the sites. BTW,
this nnpt posting host made several appearances in Andrew Gierth's
cancel analysis since the 13 Feb.

>This looks like it
>was routed all over Europe but the logbridge.uoregon.edu might be
>useful *if* not forged.

All over Europe, TWICE... but that's not all that rare in and of
itself.

>Maybe the Postmaster at uoregon.edu(University
>of Oregon, Eugene OR)can give some assistance.

I'm gambling that it is a true path, all the way to the end, and have
notified some postmasters at the end of the path.

BTW, Joe Greco's summary includes linux.itam.cas.cz as a 138.8 BI poster
in one of his summaries today.

AFAIK, the part of the "From: " line in quotes does not need to match
the original post for the cancel to work. At most site, the address
portion must match however.

I didn't know if this was a cancel of a forged message or not. I have
not seen any posts from Mackey using the parg.org address, but he does
include a parg.org URL in his headers of his postings. I figure that
it is possible that he tried posting from parg.org being that someone
was cancelling his posts made from usa.net.

If it was a cancellation of a forged posting on the grounds of morality,
then 1) why didn't the issuer of the cancel identify it as such; and 2)
the "this post cancelled my mozilla" matches the text of the cancels
out of Tamu-commerce. (Not to say that Netscape is rare, but it's
one additional item to add to the data)

Obviously you haven't noticed the number of pages you're not decoding when Win95 does something as routine as accessing the hard drive. But why would you when you most likely don't even have POC32 running on your machine which most likely isn't a pentium100?

The point still is: For the kind of application in question, DOS programs running in DOS mode are still more reliable than anything running under Windows, even for things as slow as 512 baud.

If the Pro-2005/6 has been modified to recv cell, then then OS456 has
the same capabilites. If you have not modified your scanner for the
extra frequency range, then the OS456 will not cover them either.

The OS535 is a whole different ballgame though.

You can go to http://support.tandy.com/support_electronics/2849.htm
and get a list of parts for the Pro-60. You then can call
1-800-THE-SHACK to order parts, etc. From the looks of things, you
might just take it into Radio Shack and have them repair it for you.
It does take someone who knows what is going on to replace the
CPU/Logic board on this unit.

Bullshit. None of these things are dependent on EDACS.

>Communication System. Ericsson / GE pioneered and implimented many of the
>electronic communication systems that we take for granted today: telephones,
>televisions, FM radios, and cellular phones. Ericsson can run data

Chuckle. Telephones? Ma Bell will love that. FM radio? Nah.
Cellular phones? Guess who had the first Cellular system on the air,

in conjunction with Bell labs?

>communications and voice on the same channels and don't require data-only
>and voice-only channels. Also, one radio is used for voice and data. Wide

What gives you the idea that Ericsson has a lock on that? Welcome to
the Astro line, Spectra, MTS, ...From Motorola.

>supposed to correct. Any failure in an EDACS only breaks part of the system
>and the rest keeps working. The end used would never notice a failure.

ROFL!!!

Tell that to KC MO!!!!

Now, a caveat... Ericsson does not have a lock on systems that don't
work, Motorola has their share also. But this post is so full of half
lies, and mistruths.....

>Only the communications staff knows of the failure. Not many people know
>that an EDACS system can go to conventonal mode in a catastropic failure but
>in the system's 10 year existance no one has ever relied on this function.

Again, tell it to KC mo, and numerous other locations. KC, has sued
Ericsson, wondering when the system will finally work. Ericsson says
it will, after they install ANOTHER site, but they will not install
it, until they get paid for a system that does not work....

>conversations. EDACS will run analog voice, data, digital voice, encripted
>voice for high security, and telephone calls all in one system. Users can

So will Motorola.

>also signal for distress with a push of a button. E.F. Johnson's LTR or
>Logic Trunked Radio is a less expensive but a highly efficent and reliable
>system. It can have up to 20 channels and does not have a control channel.
>All data to the radios is transmitted subaudibly while the user is talking.

Have a listing for Oakland Center; 122.0 for Flight Watch control station, and
135.7 for High Altitude outlet. These are Enroute Flight Advisory stations.
Also show a listing for Oakland Center under Mt. Tamapais. 125.85, 127.8,
323.0, 353.5 . All Low Altitude Air Route Traffic Control.
Here's another. Priest, CA. 126.9,128.7,343.8, 307.0 Low Altitude ARTC. 132.8,
133.7, 134.55, 319.1,285.4, 290.5 High Altitude ARTC.
One more. Red Bluff, CA. 132.2, 281.4 Low Altitude ARTC. 133.375, 134.975,
290.3, 269.1 High Altitude ARTC.
Hope this helps.

6026. WinRadio or Icom PCR-1000 ?

Newsgroup: rec.radio.scanner
Date: 1998-02-23 00:00:00 UTC
From: jwj@no-spam.dde.dk
Message-ID: <kbwovtidBXRj-pn2-LPe81lGqWMn5@jwj-lan34>
Source record: 169670
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner

I own a Uniden Bearcat 3000 hand held scanner and am quite content
with it.

This scanner has no option for remote control, channel programming
from a PC or frequency coverage below 245 MHZ.

So I have been looking into what is on the market that can be remote
controlled, has coverage for the HF bands and could be usefull.

My eyes have fallen on WinRadio a plugin card for the PC, a concept I
have reservations to, the inards of a PC are not exactly a HF quiet
place. And the Icom PCR-1000.

Both are only usefull in combination with a PC, but how do they
compare ?
How much is the PC involved in scanning once the scanning parameters
are set ?
Do they do CTCSS decoding and conditional stop ?(I dont like to listen
to the nonsense hiss of encrypted police conversation)
Do they have DSP options ?
How do they handle intermodulation and strong signals ?

I know that they may not compare favorably to a single band receiver,
but are they any good for HF ?
(I dont have any HF receivers, I am a licenced HAM but my license does
not cover frequencies below 50 MHz. (I hate Morse :-)).

If you can point me towards reviews of the two products or want to
sugest alternatives, feel free to reply.

The entire path is legit. There is no peering between the vszbr.cz server and other servers but one in CZ. All other CZ news takes the path from the main CESNET news server to ECRC. From that point, it's fastest come, first served, and I pride myself on fast servers, which is why vszbr.cz and Tele Danmark appear frequently.

I was wrong in my previous post. The canceller is apparently adding
the part of the "From" line that is in quotes.

I just did a check in DejaNews of my posts to rec.radio.scanner
(geovet@ix.netcom.com) and 7 of them have been cancelled.
The Mozilla line was there and there were comments in quotes
in the "From" line similar to the headers that you posted. I'm not
very good at this :(

Hi Jesper,

I don't think the PCR-1000 has been the success that Icom hoped
for when it was introduced.

People are complaining about slow scan-speeds and bad software.
Icom has not made any third-part software-vendors welcome either,
because they do not want to released any code , etc...

The WinRadio is getting better after each revision, but as you
say; The interiors of a PC is not exactly the most welcoming
place to a scanner....

The AOR-8000 is a great little scanner that has a PC-interface
(even though it is a bit complicated to operate). It can also
be used in conjunction with an Optoelectronics Scout "sniffer".

Other good alternatives would be compatible base-scanners from
Realistic (Pro-2005/Pro-2006/Pro-2035/Pro-2042) together with
a separate computerinterface from Optoelectronics. The Realistic
setup would also allow for use together with the Scout, and has
several other advanced features also.

Please check with the mailing-list [DK-scan], and you can pick
up new and used gear nearer to your own "shack"..

Regards,
Knut

Optoelectronics does have a spec for their protocol and it is quite
complete. Nothing secret since they rely on third-party vendors to
generate the software to use for their boards. I have used this
spec to write my own programs for it so everything is there one
would need. Two thumbs up for Opto, two thumbs down for Uniden
and iCOM.

A BI is an index. An index of 20 is a reasonable threshold level above
which postings are most likely spam. IIRC, this address had something
like 45 similar posts crossposted to enough newsgroups (more than 138)
which when run through the formula, gives it the index level of 138.8.

Hi.I currently have no scanner and I am thinking of getting one.I currently monitor LAPD on my Astro Saber 3 450-512MHz portable.I would like to get a base scanner that is good but not too expensive.I used to have a AOR5000 full coverage but ran into money problems and was forced to sell it.I am leaning
to a Pro2006.Heard that is a good base scanner.I would appericiate your expert advise.

Thanks.

You dumb fuck. Don't open your mouth when you don't have a clue. I can find thousands of cmsg's every day, just like you can. They don't mean SHIT!

The fact remains that over 80% of the usenet servers in the world do NOT ACCEPT these cmsg's anymore for this very reason.

Get a clue, asswipe.

wrote:

>I found an unusual transmitter while cleaning house and wonder if anyone can help identify its frequency or how it works. It is a remote ï¿½panic buttonï¿½ designed to be worn around oneï¿½s neck and transmits to the house alarm system when activated. A silent alarm is then triggered and the appropriate law enforcement authorities respond. The device is as follows:
>about 1.75x1.25x0.5 inches, tan plastic housing with red LED and white round button, battery compartment door labeled ï¿½Linear,ï¿½ sticker on bottom reads ï¿½FCC ID: EF479 SNT00055 Linear Corp., Carlsbad, CA Made in Hong Kongï¿½, inside batt compartment are eight dip switches labeled 1-8 going right to left. Unit is operational.
>I believe this came with a Ademco alarm system about ten years ago and I would appreciate any info.

You've identified it pretty well already.
ABout the only thing I could add is they usually operated on 315.8
mhz, or there about.
Range was 300 feet to the companion reciever.
Reciever took 12 volts power and had a set of dry contacts on it.
They're still made today.....

Hi Jim...

The Sportcat cannot be modified to pick up cell. However, you can probably pick up cell calls (ghosts?) by searching around the 860, 890mhz range.

What would the clue be WILLY?....You think we all canceled these posts
as part of some conspiracy?...I have not cancelled one of my posts
this year. SO WHO DID?....
The fact remains that the AUTHORS of these posts are complaining about
a rogue canceller, who is cancelling posts other than his.

LOL....then you've seen what I've seen and you're still not clued in.
Guess I'm the lucky one with four ISP's all belonging to the 20% that
do. Ok, maybe 3 ISP's....I don't like to use AOL's newsreader so I
don't know whether it or any of the upstream servers are accepting the
cancels or not.

Besides 80% is not equal to 100%. I'll admit I'm no USENET expert,
but by your own statement one is led to believe that cancels are
happening somewhere.

BTW: I've read much more creative language then your shoddy examples
below.

Kenwood uses the EF Johnson LTR system. It's not as good as any of
Motorola's systems - IMO. But it is certainly adequate. Any LTR
compatible radio will work on the "Kenwood" system.

I work for a company that supplies radios to dealers. Us and a couple
of our dealers locally, and probably most, have what we call
"breadboards". This is a radio mounted to a wooden board. You plug it
into your cigarette lighter adapter, loop the seatbelt through it, and
toss a mag-mount antenna on the roof of your vehicle. Ask if they will
allow you to try them out for a few days.

It would be a good comparison to A-B your current system with the
competition.

400MHz will almost always offer better mobile coverage than 800MHz.

All for sale, all unblocked, all top dollar. Make offers
If you need to ask questions about what it does, how it works, what it's for, then you don't need or want it

I'd like to sell to interested party in CA (Bay Area) where I am located, so the "game" of COD, $$ 1st, try to beat the seller, etc., does not come into play.

All this stuff is orig, perfecto, and loads of fun. Other pressing issues, needs, health, job, life, etc., is consideration for sale, ONLY at the right price. Make offers, don't ask, what I want. If you know what you will have, then you know what it is worth.

For sale:

AOR AR8000, unmodified, but can be, with the DSP8000
speech inversion board installed. Includes the original
nicads which were never used, leather case, power supply,
original box, & manuals. Also included is an extra rubber
duck antenna, another 40 dollar value. Unit is 1.5 years
old purchased from EEB, & is in absolutely perfect condition.
Reason for selling: never use it. It has been sitting in my
desk draw for 6 months. Asking $475 shipped to your door via
insured UPS or Priority mail. Can provide many references if
requested. This is NOT the newer 'B' version.

Email all response please,
Thank you,
Gary...

FWIW, WDW in FL is in fact a governmental entity, it is a
quirky situation and someone who is more familiar with FL
laws can give a better accounting but WDW is in a place
called the REEDY CREEK IMPROVEMENT DISTRICT. this district
acts very much like a regular municipality. They have their
own taxing authority and provide their own emergency
services. There are a few residents (all WDW employees) and
they form their own town council. So while WDW isn't a state
yet they do act in a governmental situation

If I were to be in your car or your home or even in
your yard, would I not be subject to your "bullshit"?

You were subject to my "bullshit" on Fido's SCANRADIO
echo simply because you wanted to use that forum as
an attack base. You didn't want to talk scanners and
scanning. Instead you wanted to attack me for my
advice on using TV antennas as scanner beams.....

With a 20-year history and loads of empirical data on
how well TV antennas do work as scanner beams, your
attacks were declared OFF-TOPIC. And you were advised
that you'd be evicted if you persisted.

THAT....and only that was the "bullshit" to which
you were "subjected".

Your "victimization" wasn't all that complicated. And
you did comply, if memory serves, and you were not
booted. So what's the problem?

At least tell the truth, please. *THE* truth, please.

6094. Help identify this transmitter

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <6cv5jt$lg6@sjx-ixn8.ix.netcom.com>
Source record: 169359

I found an unusual transmitter while cleaning house and wonder if anyone can help identify its frequency or how it works. It is a remote "panic button" designed to be worn around one's neck and transmits to the house alarm system when activated. A silent alarm is then triggered and the appropriate law enforcement authorities respond. The device is as follows:
about 1.75x1.25x0.5 inches, tan plastic housing with red LED and white round button, battery compartment door labeled "Linear," sticker on bottom reads "FCC ID: EF479 SNT00055 Linear Corp., Carlsbad, CA Made in Hong Kong", inside batt compartment are eight dip switches labeled 1-8 going right to left. Unit is operational.
I believe this came with a Ademco alarm system about ten years ago and I would appreciate any info.

> about selectivity!

Ordinarily, the better the selectivity, the better the
sensitivity, since as you narrow the bandwidth, noise
decreases and gain increases, resulting in a better
signal-to-noise ratio.

So what issues faced you such that you got contrary
results? Maybe there is a solution if we dig deeper?

I usually find noise to limit my sensitivity
improvements....that and bandwidth. I mean, yeah,
you can crank up the sensitivity on VHL-Lo, fer
instance, but all hell could break loose up on
1 GHz, if the adjuster didn't know what he was
doing. I know that doesn't imply you...but the
principle is sound....boost the sensitivity and
narrow the bandwidth....or vice-versa.

That's partly why scanner synthesizers are noisy;
they have to be fairly broadbanded. Noise reduction
techniques get expensive, so there's a point where
the manufacturers wrap it up and go to market, despite
room for improvement.

6097. Trade scanner for Drake crystals

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: steven.e.huss@tek.com
Message-ID: <steven.e.huss.164.05DAFBDC@tek.com>
Source record: 169362

I have an old Bearcat 210. It must be late 70's production. It's a base scanner with LED readout and frequencies are synthesized. It has 10 memories and one range search.
Limited coverage; 30-50, 146-174, 416-512 MHz.

I would like to trade this scanner for some crystals to expand band coverage for my Drake 4B receiver. Let me know what you have.

Checkout this website it's Tandy Corps. You can find information from there on where you should send it. Or you can just send an email to support@tandy.com They send a response pretty fast. You also might goto http://www.grove.net/~grove/ I know they service the Radio Shack scanners they sale but don't know about anyothers.

>please help! shadowman@oaktree.net - thanks, mary

In addition to the Airman's Information Manual (AIM), I suggest
purchasing a copy of a local VFR Sectional Chart. If you're really
interested, get the Instrument charts and approach plates too. These
charts have the VOR and NDB names, frequencies, and intersection
names. Otherwise, the "lingo" you hear won't make much sense.

All these reference materials are available from most airports which
have flight training facilities. You also might try asking a pilot
for some out of date charts or even an out of date AIM. They don't
change that much for your purposes, though a pilot might run in to
trouble if s/he doesn't have the latest charts available...

>What is intermod? Is it the awfull "chirp squawk" noise I get on my
>Uniden BC7?

Maybe. Maybe not. The "chirp squawk" you hear may be a real paging transmitter operating on a proper frequency. Or it may be the result of Intermod.

"Intermod" is slang for Inter-Modulation Distortion (abbreviated IMD). In your situation, IMD results from having too many strong signals enter your receiver. This causes bogus stations to appear where they ought not to be. It can also cause interference on top of other stations you are trying to hear.

That's the short answer. The study of IMD is something many electrical engineers spend careers on. If you want more detailed answers, feel free to e-mail me.

Drop by a local Radio Shack and have them send it off to one of their repair facilities. I recently came across a free 2004 which has severe power circuit problems. None of the local CB repair shops could figure it all out. Finally I took it back to Radio Shack and their repair center is in the process of repairing it. It won't be cheap at $150 in repairs, but at least they say it will work again.

Why is this so hard to comprehend? You're at least the second person to say this, without having the slightest idea of what is going on, it seems. There have been many, many cancelled posts and not just B.C.'s. In fact, it appears that almost every post with Mackey or Cheek in the subject line has been cancelled. It is quite easy to determine this. Go to www.dejanews.com and search on Mackey's (one of several) e-mail address, for example. If your newserver has control.cancel and you have the time to wade through a zillion cancel messages, you see several others.

Will, you need to wise up. Cheek may be paranoid, but just because
you don't know how to find cancelled messages doesn't mean that it
didn't happen. Check out DN, learn how to do a search, then come back
and roast Cheek, Mackey, and the gang if you still feel like it.

Nah, you are comparing apples to oranges.

FIDO, and SCANRADIO is a moderated system. You know that going in,
and you play by the rules.

These newsgroups however, are not moderated, and you know that going
in.

Most people can see the difference.

6131. Bearcats or Radio Shack trunktrackers??? Advice?

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: JC <j.c.w.@ix.netcom.com>
Message-ID: <34F2595A.B06603CA@ix.netcom.com>
Source record: 169396
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi,

First - thank you to all who sent me info on trunktracker options, it has been very helpful, I've looked at both the BCs and the Radio Shack models, which appear to be Uniden (?), price seems to be close on both hand-helds and base units.

So, what is the general opinion on which to purchase, and pros or cons I don't yet know about? I think I will go with a base unit first, but I'm not totally sure on that yet either. Are there any PC interfaces or other goodies that would 'tip the scales' in one direction or the other? How about if the backlight will light when squelch is broken (this is a major frustration with the older BC200XLT
I am still using for mobile).

Again, any and all information would be very welcomed!! Since this trunking is new to me, I'm trying to make an informed purchase.

Much thanks,

JC Woodard

again - if you wish, email me privately at j.c.w.@ix.netcom.com

Of course not, you horse's ass. Do you suffer
consequences for booting jerks and idiots off
your property for non-compliance with your rules
and codes?

> It was a high point in his life when he could silence others.

There you go straying from the truth again, fecal breath.

> He will even brag about his past censorhip activity.

Brag? Hardly. I certainly do remind Mackey that he got
a Size #13EE crosswise on the seat of his pants for his
failure to abide the rules of that forum. He forgets
all the time. Mackey has very poor cognitive and recall
functions.

> But like all cowards and bullies, he cries when he gets
> the same treatment,

You're straying from the narrow and righteous path, wingnut.

> and he wants to get up a posse to track down the
> culpable party. So it goes.

Ummmmm, Mackey got "censored" a lot more than I did.
I wouldn't censor Mackey in a free forum and said so.
I wouldn't even censor you. You're funny. Kind of
like the monkeys in a zoo. Entertaining. Free, too.

The thing is, numbnuts, Mackey tried to exert his brand
of bullshit in a moderated forum of which *I* was the
moderator. That forum was *my* property, same as your
home is your property. Mackey had no choice and was
given no choice but to abide the rules or get a Size #13EE
crosswise planted up his grump stump.

Mackey failed to make the correct choice. But there
was no censorship whatsoever, so long as the topic stayed
on SCANNERS AND SCANNING. But your little sweetie-pie
Mackey wanted to talk about things other than scanners and
scanning.......just like he does here......and he kind of
figured (stupidly) that I couldn't evict him. So he
tested me.

I passed.

Mackey failed.

Simple as that. He lost. And he's a sore loser. Just
like you, Sterno. You're a low-life loser from approximately
nine months before you were born when you were conceived
from a moldy egg fertilized by an illegitimate rat.

Rave on, zitface. Rave on.

PS: I hear you and your sweetie Mackey went shopping
for furniture last weekend.

Tsk.....tsk....tsk.

It depends upon the newsgroup's charter. In the case of moderated groups where the charter allows a moderator total editorial control over the newsgroup, then while it may be defined in the broadest sense as censorship, it is no different than a newspaper editor not publishing your letter to the editor.

In this situation though, where someone who has not been appointed as a moderator, in a newsgroup where the charter does not allow a moderator, it is no different than that person who didn't get their letter to the editor published, cleaning out every newstand of that paper by theft so that no one could read opionions not to his liking.

Namely?

I don't see where Bill is preventing anyone from speaking here.

If you are refering to some Fidonet forum which he might have moderated,
didn't Fido allow you to create your own echos. What was to keep you
from starting your own echo in competition to Bill's?

Heck, why use Fido? If their rules weren't suitable for you, there
was always WWIV Net... must have been dozens of scanner groups on
that network.

I doubt it. The history of $cientologist's on the net would NEVER allow
for Bill's calling attention to the cancelling of Mackey posts, nor would
it allow him to stand up for Mackey's right to not have his posts cancelled.

With the stance Bill has taken on this case, I'd expect him to join the
Net side of the group were he to post in the ARS newsgroup.

Was he preventing you from starting your own scanner forum? I don't
see the New York Post complaining because the Washington Post won't
let them write articles in their paper... No. They have their own
forum.

The innards of a modern PC aren't all that noisy
anymore. Even if they were, WiNRADiO is superbly
shielded and filtered at all entry points. So long
as you can install the antenna somewhat remote from
the PC location, and especially away from the monitor,
there is no problem with PC noise.

I occasionally use a "back of set" whip antenna on my
WiNRADiOs without any undue noise.

> Both are only usefull in combination with a PC, but how do they
> compare ?

The ICOM is slower than molasses in a winter blizzard,
and it uses more resources of the PC than does WiNRADiO.

> How much is the PC involved in scanning once the scanning parameters
> are set ?

With WiNRADiO, hardly any PC resources are used in normal
operations. The new "Digital Suite" set of decoder apps
for FAX, CTCSS, DTMF, Packet, etc, are consumptive of
resources, but it's obvious as to why.....lots of decoding
going on there. But again, normal operations are down
near the flatline in terms of CPU resources.

> Do they do CTCSS decoding and conditional stop ?(I dont like to listen
> to the nonsense hiss of encrypted police conversation)
> Do they have DSP options ?
> How do they handle intermodulation and strong signals ?

I don't know about the Icom....but WiNRADiO can do all
that and I don't see anything unusual in terms of intermod
and strong signal overload.

> I know that they may not compare favorably to a single band receiver,
> but are they any good for HF ?

The WiNRADiO WR-1000i is a superb VHF-UHF receiver, and
an adequate HF receiver. It won't lay claims to greatness
on HF, but it sure does work there well enough.

WiNRADiO won Product of the Year award from R&D Magazine
last year. It has been extensively reviewed and covered
in Popular Communications and Monitoring Times magazines.

When you consider that a Moderator *owns* the forum,
no, it isn't "censorship"......not like the government
kind, and not like the kind that is happening on this
free and unowned newsgroup.

I'd boot your ass in a heartbeat. Mackey's, too.
And then suggest you try to do something about it.

But that's moot since this is an open forum,
and I support total non-censorship, even for the
likes of your sorry ass.

I think you're a great example of how the government
wastes tax dollars. So it's good you have you up
here in this honorable forum as a classic textbook
example of a government employee posting pure waste
on taxpayer time.

That.....and your cowardly fake identity and
bogus e-mail address......

Yeah, you're something else. But it is *good*
to have you here. Examples are always good.....

Hmmmmmmm. No offense, but lacking contribution of any
substance, how would you rate the value of your opinion?

> There has been a running feud in this newsgroup for a long time. I
> don't CARE who is right, who is wrong, and what the history is.

There's your first mistake. First of all, it isn't a feud.

Secondly, you *do* need to care about right and wrong.
Suppose, ferinstance, YOU had been wronged....say incapacitated
by a hit & run jerk. How would you feel if people said they
didn't care who was right and wrong?

Thirdly, history is very important. Those who don't learn
it are doomed to repeat it.

> Our hobby has been under attack for a few years now.

Right. About 90 "few" years to be close......

> It doesn't matter that we believe that we have a right to our hobby,

Right. Hobby is subsidiary to the real thing.

> If we don't stick together, we WILL loose our right to own scanners.

Gun owners and advocates say that, too.

> Heck, the second
> amendment says the right to keep and bear arms shall not be abridged,
> but society has decided they want gun control, and they got it.

Yes, I see you do understand........

> If they want to ban our scanners THEY WILL, unless we stick together.

They will whether we stick together or not. We are outnumbered
10,000 to 1. Or worse.

> This newsgroup is public. Our foes can read it. They probably do.

Maybe. There are over 30,000 newsgroups, though. Our little
"sandbox" isn't any different from the rest.........

> It makes us, as a group, look like a bunch of spoiled brat children.
> Half the posts are people arguing, most of the rest are "How do I
> modify my scanner to pick up cell phones?" - If you told someone how
> to make a M-16 (full auto) out of an AR-15 (semi-auto), you'd end up
> in jail. They have made new rules, and we have to live by them,
> and/or fight them as a group. Fighting among ourselves doesn't help.

Perhaps not. But newsgroups don't work in the same fashion as
clubs and organizations. You can't just hop up on a stump here
and get anyone to pay attention. Some will agree with you and
leave it to you to fund an initiative. Some will disagree with
you and attack the hell outa you. And since the squeaking wheels
can be louder than the good wheels, you'll wear down and go away.

Or.....you might come out teeth bared, spitting vinegar and blowing
fire out your nose and take off some snotball's head and shit down
his neck.

In either case, it just won't matter. Newsgroups are not suited for
stumping and starting "million man marches"....... and since every
participant is *immune* to the ravages of others, you just CAN'T
"hurt" anyone. Of course, they can *choose* to be hurt, but that's
their choice; not yours. An utter wimp can hurt people who choose
to be hurt. On the other hand, a bad-ass can't hurt the wimpiest
of the wimps who don't want to be hurt.

> I don't really expect this to make any difference.

It won't, believe me. Your efforts and intents are slightly
misdirected.

> I don't know if
> this will get canceled (Censorship _IS_ wrong). But I have to say my
> piece. I _DO_ know that this has started to turn me off to the hobby.
> I'm sitting in front of my scanner as I type this, and guess what?
> It's off, and hasn't been on in a week.

I don't understand that. What relationship is there of a scanner and
what goes on *there* to this newsgroup and what goes on *here* ? None
that I can see.....

> We're turning people off - our potential allies in this fight, and
> we're giving out foes lots of ammo. For the good of the hobby, think
> about what you say and do here
>
> Soapbox mode off, asbestos pants on

You're not likely to get any flames. Mostly people will just ignore
you. I mean, you talk a good story and it's almost possible to see
the beads of sweat breaking out on your brow and the veins down your
neck popping out. But you just can't "reach out and touch someone"

here like you can at a club meeting or even up on a real stump. People will nod their heads and mutter, "Yeah.....right." And that's about as far as it will go unless you trip some sicko's trigger, in which case you'll get barked at and sent whining.....

Me....I don't give a hoot except to say that I kind of agree but this is the wrong forum for your agenda. This is a virtual forum where most participants operate under a pseudonym and/or a bogus e-mail address. This isn't a real "place" and it's just not suited to promote real action. It is populated by a mix of stalwarts and some very real sickos, though, the latter of whom are a fact of Life that you have just got to accept.

Next, you have to learn how to harness the power of your computer to make it do what you WANT it to do. If you want to be a victim of this "feud", as you put it, then you're free to be victimized. Just don't whine and complain about it. But if you don't want to be a victim, then use your computer to create the FORCE to protect you. You don't have to participate in the "feuds". You don't have to read them. And you don't have to even be aware of their existence, if you don't want. Such is the power of your computer.........

Newgroups are a "place" where you can do what you want to do and even BE who you want to be.....so long as you understand virtuality, and can be content with "virtual results". I mean, if you want to be a stumping politician,.........hell, you can. But you can't expect real results.

About all you can realistically expect is to get a bit of relatively free information about scanners and scanning. If you do nothing more than lurk, then you've no right to complain at all. But even if you are a contributor, you'll have to freely give up your right to complain, simply because you are entitled to what you pay for.... and this forum is FREE. It doen't convey any entitlements.

That's about it, pal. Come in here all you want. Take a little; leave a little; but don't expect this place to resemble "reality". If you can get over that hurdle, then you should find some value and contentment.

If it's a "million man march" you want to start, well.....more power to ya, but you're wasting your time *here*. You'd be better off doing some talk shows; rent some newspaper space; put up a Web site; run for Congress, etc........

IMHO......

Gomer clearly states:::

I do not use a real email address for reason #1 "creatures like you" who are on some kind of macho fascists power trip. A psychopath like you would probably not hesitate to spam someone to death with good will toward pigs messages. Now maybe in your area of LA the cops are honest and helpful to the local. If this is the case that's great but keep in mind that where I live a lot of them are either harassing people this includes whites too, or they will not enforce a damn thing and their still drawing a check. This my final statement on this matter!

Ciao Alessandro, si lo puoi modificare, con un paio di jump abiliti l'immissione di frequenze da 0 a 999 e la ricezione da circa 40 MHz fino a circa 940 MHZ, riallineando poi lo stadio di front-end puoi alzare questa finestra fino a circa 960 MHZ (dipende dalle tolleranze del tuo FRG).
Ho gli schemini ed un programmino a casa, quindi nessun problema nell'inviartelo, tieni solo presente che l'FRG e' gia` sordo di natura e, che a quelle frequenze il difettucci si nota oltremodo...comunque qualcosina ...
Lascia perdere gli UP e DOWN converter ... ho preso quello da 0:60MHZ e, a meno che tu non voglia ascoltare solo broadcasting sono davvero penosi. Si, si sente qualcosa, ma non riesci a decodificare un segnale in RTTY nemmeno se gli urli le frequenze dentro !

Hear jou Later.

AAA. I Apologize if this message is only in Italian laguage, I have cutted the x-post to only that groups directly intesested at.

No, Bill happens to be a duly ordained minister of The Universal Life
Church. Do you suffer from ADD (Attention Deficit Disorder)? You
seem to have a problem with going off on tangents.

Why don't you post your real name and e-mail address? You seem to be
going to a lot of trouble to hide them. Are you afraid ?

Hi there,

I'll be in Washington for a while, and I'd like to buy a scanner - I'm thinking of Bearcat.

Can you give me the details of places that will give me the best prices?

Many thanks.

Pls reply direct to my email: stevem@yebo.co.za

not hard, I buy all my stuff from Atlantic scanners in Canada and bandercom
in Europe, but the buyer does take responsibility if equipment is "not
delivered". I have the ar8000 and love it --well worth the money. I think
a lot more people own the 8000 than the icom r10 from what I see in the
newsgroups. if you can afford it -= get the Scout from optoelectronics --
even used. paired with the 8000 you'll have a hell of time.

If I'm think right I think the Uniden Bearcat UBC3000XLT covers 25 -
1300 including cellular. Listening to Cellular, Cordless phone, and
using a scanner for personal gain or aid in a crime is highly illegal.
However I don't know what the penality is. The UBC3000XLT cost $279.00
from www.bander.com I must warn you that importing an exported type of
good can be confiscated in US costums. Some of the older Radio Shack
scanners can be modified to hear cell. Just about all scanners can hear
cordless phones. You can sometimes hear cell on an image. Personally I
don't like listening to cell because it is boring. I do like the fact
you can get the extra frequencys. Good Luck.

Uniden I think has the BC895XLT trucktracker base/mobile unit I hear it
is really good. It has just about everything possible on it. A good site
to checkout. Really nice writing review by Rich Wells!!!

I concur. I picked up the BC9000XLT and my friend picked up the BC890.
The boxes look the same, but the 9000 picks up signals that others can't
hear whereas the 890 picks up signals that aren't really there! 8-)

> There is a chance that the 2032 is misaligned or
> faulty in some area, but knowing nothing more at
> the moment, I'll stand on the BC-890 picking up
> stuff that really isn't there.

I've engineered a number of Rx sensitivity improvements. You can
usually net about -4dBm improvement - but always at a cost. The
synthesizers in scanners are rather noisey and this reduces the amount
of sensitivity improvement you can achieve. This is particularly true
of turbo-scan models.

I did get one scanner to do -125dBm for 12dB SINAD once - but forget
about selectivity!

6168. Re: OPTO Scout Problem

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <6cum3h$1q3@usenet.srv.cis.pitt.edu>

I'd be interested in hearing some comments on this question. I frequently use my opto scout like 2 inches from a 5 watt HT. Would this be detrimental or are we talking much high ranges of power?

I haven't noticed any reduced range or deafness.

One thing I have noticed is that the counter will register frequencies in the range of 180 - 230 when there is no real activity in that area.

Keith

6170. Icom PCR-1000 & ScanCat SE

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: gregg@plains.nodak.edu
Message-ID: <6cunsm$n7a$1@node2.nodak.edu>
Source record: 169435

I just got my copy of ScanCat Gold SE for windows and thought I'd post a few observations after 4 hours of tinkering.

The PCR-1000 is a neat little radio that covers dc to blue light(almost) and all modes. I grabbed the latest software off the Icom site and installed it, but it only fixes one little bug, so isn't much of an "upgrade." Most of you already know the basic capabilities of the 1000, so I won't go into it here.

ScanCat Gold SE is a Windows based rig control program from Jim Springer at Computer Aided Technologies in Shreveport La. If you call them, Jim answers the phone and is a very knowledgeable guy who can answer all your questions. Anyway, ScanCat controls many different radios and scanners, including the PCR-1000. It does NOT support the bandscope feature, thanks to Icom's refusal to release the control protocols. It supports all other functions, though.

The program is easy to install, typical of Windows programs. I'm running Windows95 release B. I had no problems with the install, and accepted the default values for everything.

When I booted the software and selected the PCR-1000 from the list of radio, it told me to choose 9600 baud. Hmm, I thought the 1000 talked to the computer at 38.8! Jim at ScanCats says the rig switches to 38.8 after the initial handshake at 9.6. Once into the software, everything starts to work, and works well. The software presents a "virtual radio" type interface that is simple to understand and operate, but is much more stylized than the virtual radios in the Icom software.

ScanCat gives you a couple of slider bars on the bottom of the virtual radio display which allows you to fine tune the timing of the radio/computer interface. This is where you can really make a difference in how your radio performs. Icom just picks a generic setting for all computers in their software. One slider is dwell and the other is timing.

Dwell is amount of time the software waits on each freq before going to the next freq, exclusive of other delay parameters. Timing is the speed at which the computer sends commands to the radio. Each of these adjustments directly impact the channels per second (cps) or scanning rate. The shorter the dwell, the faster the scanning. A short timing time can make the scanner go really fast, but skip past active freqs, and a long timing can slow things down to almost nothing. Each radio and computer combination will be different. My 1000 will go over 90cps, but won't stop on an active freq at this speed. I've found that about 30-35cps is best with my gear. If I kick it up to about 50cps it will only stop on really strong signals. ScanCat gives you some extra settings to help it detect sigs better and to go back one or more channels if it is stopping beyond the desired channel, but I found those solutions to be not as effective as just slowing things down a little.

ScanCat will allow you to get away from the 100 channels at a time limit of the Icom software and gives tremendous flexibility in how you set up your scanning, both memories and number of memories, banks, search, search and store, you name it. I can't do a complete review of ScanCat SE here, but suffice it to say, it is a VERY complete package that will really open up the capabilities of the PCR-1000.

This is getting a bit long for UseNet. If there is interest in more, I'll do a second posting later. I can compare the PCR1000 to an Icom 7100 and RS Pro2006/opto, and I can do a more in depth report on ScanCat Gold SE.

I have no relationship to ScanCat, or anyone/anything else mentioned here other than as a scanner/software user and interested person.

6171. BC800XLT repair (resistor replaced?)

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: chuckiex@ibm.net
Message-ID: <Loyunz0gstF5-pn2-zTBvdHBQJTYf@slip-32-100-186-189.tx.us.ibm.net>
Source record: 169436

Having just received my BC800XLT back from Uniden repair services, I noticed on their Service and Repair Report that a part was replaced.

The part is a VR501 and when I inquired they suggested is was a resistor, but no further information was available.

Does anyone have an inkling of an idea what part this is that was replaced?

Thanks.

Charles

I did some checking and logbridge.uoregon.edu is one of dozens of
servers at University of Oregon, Eugene. I would bet that it allows
anonymous posting and is but one of many such known and used by
the culprit. I have a gut feeling that, at least, these three posts
originated there.

6173. Icom PCR1000 Web Sites?

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: kf5oj@iamerica.net
Message-ID: <34f219a2.1306998@news.iamerica.net>
Source record: 169473

Can anyone recommend any web sites devoted to the PCR1000? Preferably some that have mod data and a command list. There are many pages out there, but with little technical info other then the Icom provided stuff. Mostly sales poop.

Clifton KF5OJ

Not likely.

Since linux.itam.cas.cz is a notorious open proxy, the chances of the
post in question having been forged from elsewhere are virtually nil.
Please also note the post from Barry Bouwsma which explains some of the
oddities of news propagaion in .cz.

6175. Re: comparison of most trunked radio systems

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: dpems500@aol.com
Message-ID: <19980224013300.UAA17826@ladder02.news.aol.com>
Source record: 169475

>That home channel "feature" sounds like it would make it much >easier for a person to monitor traffic using a scanner

That is very true. I monitored a private ambulance company in my old home town (Dallas, Tx) that used an LTR system. I was able to easily capture the *vast* majority of thier radio traffic by scanning only the "home" frequency.

6178. How is the Uniden 9000 XLT?/895 XLT?

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: someone@where.com
Message-ID: <34f2295e.19215549@nntp.ix.netcom.com>
Source record: 169478

Hello all,
Can anyone give me some insite into the 9000 XLT? I'm looking fo a continous coverage scanner. This looks pretty good. Uniden has got my business before with their CTCSS boards for scanners,which I need in the heavy transmitter area I'm in. Can't believe that more scanner makers don't add CTCSS to their scanners.

Also does the 9000 XLT have the computer connection/programming features of the 895 XLT? Don't see any mention of it in the material I have in front of me.

Any help would be greatly accepted.

I Know that most newer radio shack scanners are rally made by uniden(my pro66 &pro67 are) and ive found a bearcat that is exactly like mine, with the same exact features, just externally(cosmetically) different....so, both of my uniden made RS scanners can be reset, memory erased by truning the unit off, holding keys 2 , 9 , and switching it back on....email me if that doesnt work....

You can also get 3. to 5 miles on these phones.......
Buy the booster,,,,, and get 30 miles........
But if you did ????? what would you do with the
money,,you give the cell phone people????

Boy,,,,,the things the FCC doesn't want you to have....
I wonder who buys them off????

If it's the dispatcher saying it, it's most likely because they tire of using the whole call sign "KMA 367" and just identify the channel as "KMA"...it happens fairly often in Northern California PD's, anyway.

6186. The Fued, The future of scanners, and us

Newsgroup: rec.radio.scanner
Date: 1998-02-24 00:00:00 UTC
From: cgallo@spacelab.net
Message-ID: <34f239a0.7240501@news.mxol.com>
Source record: 169486

Hi,
I've been reading this newsgroup for a year now, but haven't
made many posts, but it's time that I weigh in with an opinion

There has been a running feud in this newsgroup for a long time. I
don't CARE who is right, who is wrong, and what the history is. Our
hobby has been under attack for a few years now. It doesn't matter
that we believe that we have a right to our hobby, If we don't stick
together, we WILL loose our right to own scanners. Heck, the second
amendment says the right to keep and bear arms shall not be abridged,
but society has decided they want gun control, and they got it. If
they want to ban our scanners THEY WILL, unless we stick together.
This newsgroup is public. Our foes can read it. They probably do.
It makes us, as a group, look like a bunch of spoiled brat children.
Half the posts are people arguing, most of the rest are "How do I
modify my scanner to pick up cell phones?" - If you told someone how
to make a M-16 (full auto) out of an AR-15 (semi-auto), you'd end up
in jail. They have made new rules, and we have to live by them,
and/or fight them as a group. Fighting among ourselves doesn't help.

I don't really expect this to make any difference. I don't know if
this will get canceled (Censorship _IS_ wrong). But I have to say my
piece. I _DO_ know that this has started to turn me off to the hobby.
I'm sitting in front of my scanner as I type this, and guess what?
It's off, and hasn't been on in a week.

We're turning people off - our potential allies in this fight, and
we're giving out foes lots of ammo. For the good of the hobby, think
about what you say and do here

Soapbox mode off, asbestos pants on

For Sale,

Pro 43 scanner with cellular band modification, service manual, carrying case, both the stock and a telescoping antennas, users manual and original box. This radio is in good condition, never dropped or otherwise abused. I have been very happy with the radio but I must sell it to pay off some debts. 200 o.b.o.

> Thanks in advance!

NO You can't get cell phones. Very few if any scanners being sold new
now can be modified. I got myself a Pro-26 and even it can't be modified
anymore. The only way your going to get cell is if you buy a scanner
from a mail order store out of the US.

Listening to cell, cordless phone, using the scanner to convey in a
felony or other crime, using the information to make a gain or profit is
against the law proseed with caution!!!

PAGE ONE -- CHP Officers' Muddy Tomb
Highway collapses -- car plunges into river
Michael Taylor, Chronicle Staff Writer Wednesday, February 25, 1998

It was the kind of routine call that any cop might get in the middle of the night during this rainy season -- road ``totally washed away down the hill.'' Go check it out.

And then, over the next 12 hours, it turned into a tragedy.

California Highway Patrol officers Rick Stovall and Britt Irvine responded to the call, radioing in three times over the next 80 minutes. Then silence. Their bodies were recovered nearly 10 hours later, still strapped in their mud-filled patrol car in the Cuyama River near Santa Maria in San Luis Obispo County.

The river tore out more than 100 yards of state Highway 166, sending the patrol car and the two officers plunging 40 feet down a mountain and into the river. CHP spokesman Steve Kohler said their car was found ``upside down in the middle of the river, on its roof, buried up to its wheels in a sandbar.''

Stovall, 39, had been a CHP officer for 17 years. Irvine, 40, had been an officer for 13 years. Both men were residents of Santa Maria.

The officers were among the latest victims of the state's deadliest El Nino storm this year. At least seven people died in Southern California, including two 19- year-old Pomona College students who were crushed when a tree fell on their car in Claremont.

A 25-year-old man was killed and as many as 10 people were hurt when mud flattened a mobile home in Laguna Canyon.

Two people were killed when the driver of a tank truck lost control of his rig on icy Highway 395 near Susanville.

One man drowned and three were missing after they tried to drive across a flooded stream in Tijuana, Mexican authorities reported.

From late Monday to yesterday, it rained for nearly 18 straight hours in Southern California, destroying homes, turning rivers into waterfalls and

chewing through highways.

In San Luis Obispo County, the disintegrating roadway that killed the two CHP officers also sent a tractor-trailer rig, a pickup and possibly four more vehicles cascading into the river.

One driver, Steve Miller, remembered the window breaking as his car slammed into the river. ``Water immediately came into the car,'' he told reporters from his hospital bed. ``I went, `I'm going to die.' ''

He was one of two men rescued from the river by helicopter and treated for hypothermia.

Rescuers searched for other motorists who might have fallen in the muddy Cuyama River and last night reported that only the driver of the pickup truck was unaccounted for.

A nearly minute-by-minute account detailed the Highway 166 tragedy on the CHP's Web site on the Internet.

CHP dispatchers in San Luis Obispo talked by radio to officers in the field, typing messages into a computer that transmitted them to the Web site (http://cad.chp.ca.gov/), Kohler said.

The first call came in at 2:30 a.m., caller unknown, saying that Highway 166 was washed out.

The dispatcher radioed CHP officer Jim Garcia, who said, ``(Unit) 5-422 should be out. . . . If they cannot handle it, call me back.'' Car 5-422 was apparently Irvine and Stovall's.

At 3:08 a.m., car 5-422 reported that ``the rig is a tanker, gas/oil, safely off the road.'' Then, 33 minutes later, the car radioed that a big rig was blocking westbound Highway 166. ``He is not stuck, but needs to turn around.''

Suddenly, at 3:52 a.m., a frantic call: ``5-422 emergency (radio) traffic. Lost entire road here -- ''

Silence. Then the dispatch message: ``broke off,'' meaning no more contact with 5-422.

In the next eight minutes, the dispatcher talked to Garcia, then said more patrol cars and an ambulance were on the way. ``Huge injury t/c (traffic collision),'' the dispatcher said at 4:01 a.m.

Over the next nine hours, the anonymous dispatcher's messages described the disaster.

At 4:28 a.m: ``Two units (cars) hanging off edge, one big rig on its side, two fire department units (are on the scene).''

At 4:30 a.m., a police scanner radio message: ``Large sinkhole, need helicopter.''

At 4:36 a.m., the dispatcher said the CHP's Bakersfield office, more than 100 miles east, ``will try to get as many units as possible, but bad on their end, too.''

At 4:40 a.m., the patrol got word from the Santa Barbara County sheriff that ``swift river water rescue (units) are en route. Road undermined, we cannot even walk on the shoulder.''

At 5:49 a.m., the dispatcher noted, ``there are multiple vehicles in the river.''

At 12:14 p.m., nearly 10 hours after the incident started, there was a message, ``Officer Irvine's wife back in area,'' with the request that an officer get in touch with her.

Rescuers brought in a 90-ton capacity crane, and they restricted the air space over the accident scene.

At 12:46 p.m.: ``Peer (counseling) group with the family members now.''

> > >>is best - because it isn't!
> > >

Tell Kansas City MO how wonderful Ericsson is. They spent the bucks and
they have had problem after problem. There are even some KCMO PD
officers that have started lawuits against Ericsson because they were
left high and dry when the system went down (again) and they got shot
because they could not call in for a backup. The KC system's computers
shoot craps about once a week. Some firefighters were in a burning
building, and command said it looked like it was going to collapse, so
they got on their wonderful Ericsson radios to tell them to evacuate,
and guess what...the computer had gone to sleep and they had to send
more firefighters in the building to tell the others to get out.

We have 2 Motorla systems in the KC metro area, and they work nearly
flawlessly. (Not perfect, but a heck of a lot better than the KC
Ericsson system.)

Hi.

My problem with IC-706:
- 2m TX not working properly (power output)
- 2m RX is too low
- All other amateur bands are working properly

The antenna is working properly. I tried with two antennas. I could use it for HTX-242 so the antenna shouldn't be a problem. Now, it must be somewhere inside, but I can't figure it out. (the cables are connected properly...)

Thanks for your help.

6199. Best handheld scanner?

Newsgroup: rec.radio.scanner
Date: 1998-02-25 00:00:00 UTC
From: dcs4.NOSPAM@psu.edu
Message-ID: <dcs4.NOSPAM-ya023580002502981815450001@news.psu.edu>
Source record: 169099

Hi folks:

For a long time, I've kept a handheld scanner in my car. I sometimes use it out of the car as well (thus handheld rather than mobile) but the primary function of the scanner has been for use in the vehicle. (I have an 80-mile round trip commute to work each day, with the scanner I can keep in touch with what is going on around me.)

I can remember not all that long ago when I had a Bearcat 20-channel scanner. (At the time, I thought it was something--but at the time, I was using an Apple IIe and thought it was something, too!) I replaced the 20-channel with a BC100-XLT. Then a local police agency went to an 800 mhz trunked system, and I upgraded to a BC200-XLT, which is what I have now. (I still have a 100 yet, too.)

Many fire companies and other sources in my region are still lo-band, so I have a need for a unit that will receive a broad spectrum of signals, from vhf lo though 800 mhz. I've been pleased with the reception I get with the Bearcat units, espcially since I use them in the car without an external antenna. But I have seen scanners with much faster scan rates than the XLTs, as one criticism.

I've thought recently that I might consider selling both bearcats to pick up a little newer technology, but I'm not sure what the XLTs are really worth these days...and I'm not sure what alternative products are out there that would be an improvement over what I have...and how much of an improvement is possible.

If you have any opinions on those thoughts, please share them. I really don't want to start a battle here over the answer, though. If anybody has any suggestions, drop me a note or post to the newsgroup and let me know your choice and reasoning. People have a right to different opinions, too, so lets be tolerant. ;-)

Thanks!

- Dave

Modified for what? In general, no, that is not true.
But there never was a cellular mod for the PRO-26,
if that's what you're getting at.

But only those frequencies that corespond with the preprogrammed step size -- ie. where the frequencies are 30 or 10 MHz (KHz ?) apart, you are only going to receive the ones that coincide with the 12.5 MHz (KHz ?) step size.

From: stoli126@aol.com
Message-ID: <19980225212900.QAA22374@ladder03.news.aol.com>
Source record: 169149

I reside in Albany, NY and just purchased a Trunk Tracker. I have followed the instructions for programming the Trunk Tracker and it seems to be working fin but I am a little confused about some things. Perhaps someone in or near Albany is reading this and can help. First the steps I have taken were programming in the 14 frequencies that Albany Uses. Then I hit search and get Albany PD Albany Fire Etc. Next day comes and I turn the scanner on and do the same thing and I am only gettting the Albany Street Department Plows etc no more Police until programming the 14 into another bank and then hitting search and then its fine again Why is it that some days I am only hearing the street department Do things change from day to day or am I doing something wrong. Do I have to program the frequencies in every day. Many thanks either E Mail me or post to group Greatly appreciated

How sad, Bill immediately starts attacking this guy. Very typical
of Cheek! :(

> Thirdly, history is very important. Those who don't learn
> it are doomed to repeat it.

Bill, you are VERY correct here. That is RARE for you &
I to agree!

An example of your statement is that YOU have never learned from
the history of YOUR mistakes, so you keep having & causing
the same old problems over & over & over. :(

> That's about it, pal.

I couldn't have said it better myself!

I agree with the first statement, this is not a feud but, rather cyberlands attempt to imitate the Yale Debating Society......Case in point Secondly, Thirdly.....Typical engineering analysis of a specimen....

After 15 years of cyberland it has become clear no one is right nor is wrong.....just "technically" flawed in delivery, analysis, conclusion or some other mote point of order.

I have been trying to verify the working frequency for the DeSoto
County, Florida Sheriff's Office.

I know it is listed as 46.020 MHz in all directories.

Is there anybody who can either confirm that this is correct ,or that
can give me the correct frequency.

Thank you in advance.

Regardless of what Bill Cheek says, which is a matter of opinion, the SC-150 is an excellent scanner for what it was intended for. I've owned one for over 2 yrs, it has been dropped onto concrete on more than one occasion (by accident of course) and the battery is enough to even impress the Energizer Bunny. It works just as well as it did when I first bought it, and only has 2 scratches.

I am planning on buying a handheld scanner this weekend, and after checking around, I have come down to either buying the Pro-51 or the Pro-64. The Radio Shack not to far from me has the Pro-51 on sale at $170, and another Radio Shack a few miles away has the Pro-64 on sale for $180. Is their any advantage that the Pro-51 has over the Pro-64? I'm pretty sure that I will buy the Pro-64, but I figured that I should check what you folks had to say first.

The BC55xlt will not receive in AM, the mode used by aircraft transcievers, thus it's frequency coverage does not extend into the aircraft allocations (below 137 mhz). What do you mean "piece of @#$% ?. The BC55 does what it was made to do, reliably. I have better scanners, but the BC55 is about the best cheap 'beater' scanner you can get for less than 20 bucks, then leave lying around without worry. I leave mine in my company truck all the time, just to monitor the local cops.

PH> I have a question regarding the pro-26 virtual down conversion mod.
PH> Exactly what frequencies are down converted by this mod and is only
PH> the cellular region down converted. I was just wondering what other
PH> frequencies this mod would affect. Thanks.
--
The frequencies downconverted are from 819.8000 MHz to 1020.8000 MHz,
which can be picked up from 311 MHz to 512 MHz. The search mode in
5kHz steps is 300 ch/sec, so the equivalent search speed for cellular
30 kHz steps (NFM mode) is 50 channels per sec, which is quite fast,
and reception quality is identical to unmodified 800 MHz frequencies.

Well, that's nice and all......but you're not
going to find that sort of thing here. It's
a lot more than "turning" something.

In other words, there are no simple ways of
telling you how to improve the sensitivity
of your scanner. And in most cases, the scanner
is as good as it's going to get.

Sorry.

> E-Mail to Miteel@hotmail.com

In the simplest explanation, just peek inside
the battery compartment where you will see
three contacts.

Now look at the business-end of your battery
pack where you'll see two contacts.

The trick is to add some surface area to
the right-most contact, so that it can touch
not only the middle one inside the scanner,
but also the one closest to the side wall.

Like this:

A B C
O O O <---inside compartment

O O <---your battery

So do this:

O O O <---inside compartment

O Oxxx <---your battery

where "xxx" is an extension of that contact
so that it can touch B and C inside the
compartment.

That is hardly the whole story.

>Your "victimization" wasn't all that complicated. And
>you did comply, if memory serves, and you were not
>booted. So what's the problem?

The problem has already been addressed here in the past, and I'm not
going to go through it again. Anyone who was around already knows it,
and those who weren't can peruse the archives.

The fact is that you abused your power, so I obeyed "your rules," even
though you and your cronies did not. I bided my time, and when we met
here where you did not have any advantage, I got my side of the story
presented, much to your chagrin and frustration. Once it was over, I
let it drop; I'm not a vindictive person. The only time I jump on
your case is when you do something outrageous. The rest of the time I
just sit quietly and let you dig yourself deeper into the muck with
your own words.

>At least tell the truth, please. *THE* truth, please.

I always tell the truth as I see it, Mr. Cheek. I try to do it in a civilized manner in forums like this where flaming is not welcome. I'm sorry if this upsets you, but that's not really my problem.

And I support free speech even for those who disagree with me and don't suck up to me, unlike you on "your" precious FIDO echo.

Now go ahead and take your customary cheap shots at me. I can handle anything you can dish out, and far more than you can even imagine. As a flamer, sir, you are a lightweight. And that's the TRVTH.

Sorry, I have no interest in forcing a free forum into
tyranny.

> Interesting that you "support total
> non-censorship" and at the same time express the threat of expulsion under
> your, ah ... stewardship.

You posed a hypothetical "what if". Well, if this forum
were moderated and if I were the moderator, I'd kick
your ass from here to next Tuesday,....for cause, I might add.

That doesn't mean I'd support changing this forum to be
able to do that. You just asked "what if". So I told
the truth. And since you and Mackey are "attached",
he'd have to go, too......by default.

That's like I am totally against capital punishment.
Yet, I'd be the first to "execute" a violator of my
inner sanctum.

There is neither disparity nor confusion there. I
simply would not like someone else kicking you out
of here. I'd want to do it myself. And then salute
you with middle finger held high....

> I wonder how your champion Reverend Tweek views this discussion?

Why don't you ask HIM?

But in a vain attempt to speak for Tweek, I'd venture to submit that you and he would have to go to the hospital on three legs to get his right foot extricated from the depths of your exhaust pipes.

And that would be terrible.....not for the sake of the Athlete's Foot of the arse that you'd get; rather for the gangrene, AIDS, chanquer, crabbes, and clappe that would eat off poor Tweek's foot.

Gawd.....makes me cringe to think about it.

But.....you asked.

Nothing.

An elected moderator of a free forum would
be rather powerless. And you can't just up and
change a free forum to a moderated one.

Anyway...no need to test me. *IF* I had the
power to evict you, I would do it. Not to censor
you......just for the sake of nailing a totally
useless member of society to improve the genetics
of the species.

But tests not needed. I told you what I'd do.

Call from a pay phone and tell them you mr smith.
Tell them you heard it on the scanner and hang up.
You never can tell, you might have prevented a murder.

Never call from your home and the 800 numbers are even worse to call.
They know who you are right away. Use the pay phone.

I've never been one to go all out for looks.
Appearances are deceiving. If I look like
Krusty....and you don't like it, you'll have
to take that up with my hairdresser and
Cosmic Maker.

Which shows how easily sidetracked and unfocused
you are. My problems may be physical....but
yours are mental.....

Big difference.

I am a sheriff dispatcher in Yellowstone county in Montana and VERY soon we'll be switching from a conventional vhf high band system to a Johnson trunked system citywide in Billings, Montana. Can anyone tell me what we can expect in the form of problems initially with the system??? The powers that be so far have left us all in the dark and we'll be up and running supposedly by summer. Please advise me if possible. Thanks, much.

He does have that bureaucratic, jack booted style but I don't
think that he really works for the government. I think maybe he
just stole a little access to an open server that happens to belong
to the government. His posting path isn't consistent. He's just
another low-life forger. The longer he posts, the greater the chance
that he gets caught and exposed.

regrettably, about everything in your area, including OSU PD uses 800
Mhz. Public Safety in Franklin County is more often than not in the 800
band. You need a Trunktracker to survive here :(

Just finished playing with the new Radio Shack PRO-2048
and have posted my first impressions of it. For all
who are interested, point your web browsers to my home
page below, follow the radio monitoring link and catch
the link in the Latest News and Updates section.

Happy reading and monitoring!

Strong signals,
Rich Wells N2MCA http://www.qsl.net/n2mca/

SUBJECT: Free, CoCo III, NYC area
If you or anyone you know could use a Tandy (Radio Shack) Color
Computer model III, it's yours for the asking.

1 CoCo III
1 CM-8 color monitor
1 502 externa disk drive (5 1/4")
1 DMP-106 dot matrix printer
1 3-slot adapter *
1 RS-232 pack *
1 Direct connect modem pack
1 Deluxe joystick
+ all the cables to make it work.

* Three slot adapter or the 232 pack might need a new chip.

This old system is just collecting dust around here. I offered it to the
local high school and they politely turned it down. I really don't want
to throw it away so I'm hoping someone out there could use it. I used
to use it as a packet station and it worked pretty good.

It's all boxed up and ready for pick up or shipping. You pay shipping.
Conus only.

Contact: Barry, N2NYD, Brooklyn, NY
E-mail: ewuq77a@prodigy.com

On the contrary - you're just an idiot when it comes
to facing facts on how cmsg posts propogate (or don't in
this case). But that's ok. I'll just assume you
enjoy spouting off and pretending to know otherwise.

>Talk about not having a clue? YOU'RE running

Most of the police and fire use 800 mhz. However, I know some railroad
freq's that are somewhat interesting. They are:

Conrail 160.800, 161.070
CSX RR 160.230,160.32
NS RR 161.190

I don't understand what you mean there. Your posting
frequency in this forum goes up and down like a yo-yo,
but you *never* post on-topic, and you are *never*
friendly and sociable. You are always *on* someone's
case - *never* on the subject of scanners and scanning.

Is THAT fair?

> > Re TV Antennas for scanners......

> >THAT....and only that was the "bullshit" to which
> >you were "subjected".
>
> That is hardly the whole story.

It is the whole story as far as YOU were concerned.
You galloped in out of nowhere to attack me for my
stand on using TV antennas for scanner beams. There
were no other issues betwixt thee and me.

> >Your "victimization" wasn't all that complicated. And
> >you did comply, if memory serves, and you were not
> >booted. So what's the problem?
>
> The problem has already been addressed here in the past, and I'm not

> and those who weren't can peruse the archives.

You haven't addressed it with me, and I don't recall
seeing you tell anyone else. You don't hold conversations
with people. You just snipe and potshoot here.

However, I do have a record of yours and my interchanges
on Fido.....and the TV Antenna Issue was it. And only it.
And you got personal from the opening shot....it was
obvious you weren't there to discuss scanners and scanning,
same as you're not here to discuss scanners and scanning.

> The fact is that you abused your power, so I obeyed "your rules,"

It wasn't a matter of power. You were MY guest there.

> I bided my time, and when we met
> here where you did not have any advantage, I got my side of the story
> presented, much to your chagrin and frustration.

HA ha ha ha ha ha..... Well if that is true, then present
it again so that I will be even more frustrated and chagrined.

> Once it was over, I let it drop; I'm not a vindictive person.
> The only time I jump on your case is when you do something outrageous.

Oh. I see. Hmmmmm, your track record says different. But
who cares. I had you on my Shit List for a long time. Maybe
I missed something. You sure continue to take your snipes and
pot shots nowadays, though.

> I always tell the truth as I see it, Mr. Cheek.

No no no no.....I'm not talking about OPINIONS, man. Not
those things that have "color" depending on the eyes. I was
talking about YOU and ME on FidoNet and the TV Antenna issue.
There is no "as we see it" there. Just truth.

Like here. You do not discuss scanners and scanning. You
participate in slams and off-topic hullabaloos to the exclusion
of everything else. These are TRUTHS......

Like......how TV antennas make great scanner beams. THAT is
a truth. It isn't an opinion.

I don't care if you believe in a 3-headed deity of some sort.

Author: Daniel WCC, 9V1ZV
Date: 4 February 1994
Subject: Band extension mod for FRG-9600/965

Foreword

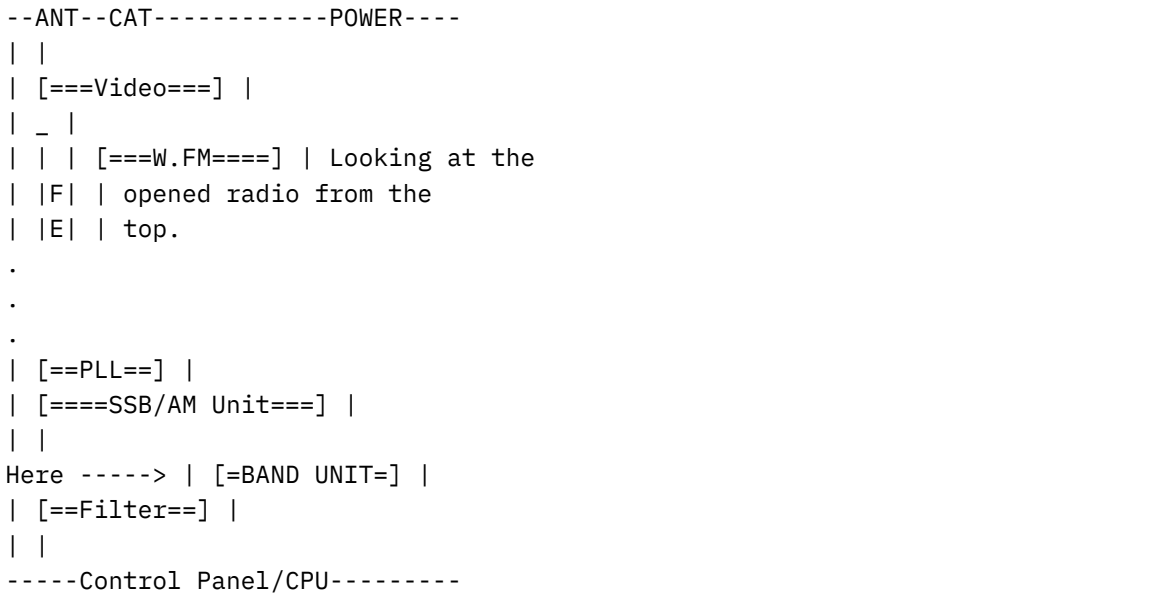
Since I bought my second hand FRG-9600, I have been fervently looking for mods for the radio. I have seen mods for so many other scanners, I could not believe there was not even one for the FRG-9600. This was quite disappointing as I liked the idea of making mods to radio. Recently I received my service manual for the radio and the result of which is this simple mod. All you FRG-9600 people out there, use your creativity. I am not sure if opening up the radio and performing the mod will void your warranty so you may want to check it out first. I can only say that this mod works perfectly for me but will not accept responsibility if you destroy your radio by your own mistakes.

Description

The original range of the FRG-9600/965 was from 60 mHz to 905 mHz. Looking at the circuit, however, revealed that YAESU had originally designed the radio to cover HF as well. Not only that, it also had coverage up to 950 mHz. I suspect that there had originally been intended a module for HF frequencies which is supposed to fit into the empty slot (J8001/J9001) next to the VHF/UHF front-end unit. For some reason, this option never materialized, maybe for commercial reasons! Anyway, it seems that some provision had been made on the Band Unit module to go ahead and make use of these bands anyway without the dedicated HF front-end. Thus, we can now enable reception from 20 mHz to 950 mHz with no gaps in between. Unfortunately, the sensitivity is not fantastic at the fringe frequencies but nevertheless signals can still be received. If you have a computer on, the RF emmission from the PC is likely to drown out most of the 30 mHz band anyways so you may want to go manual on these bands. The 905-950 band is more acceptable and works fine pulling in cellular on those channels. You will probably hear some of the RFI generated by the radio's on-borad CPU here and there also.

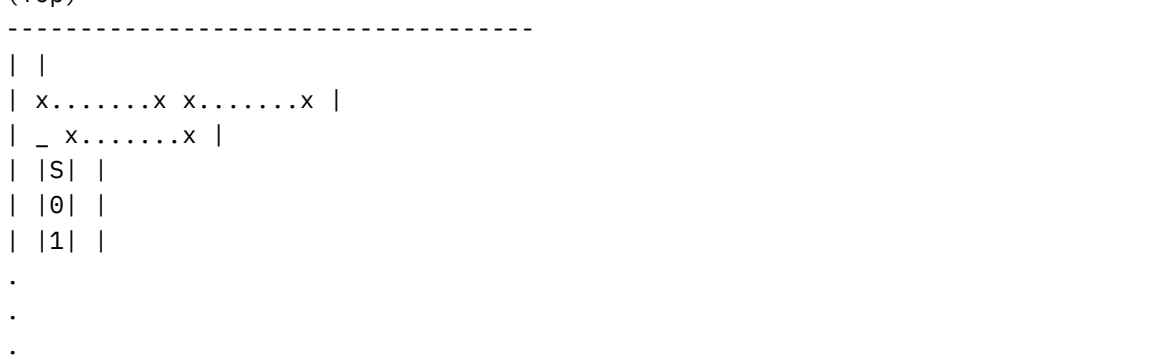
Modification

The mod itself involves soldering in 3 jumper wires onto the Band-Unit.
The Band-Unit is the closest module to you on the left. Carefully remove the cover of the radio by unscrewing the 4 screws holding down the top cover. In order to remove the cover, you need to push it back about 15 mm before lifting it so be sure not to apply undue force. Be sure to remove the power supply before beginning.



This gives you the idea of where the Band Unit module is located. The actual module names are printed on the main PCB so take a closer peek and you will see which one is which easily.

Now that you have identified the module, look carefully at it. You should
see that there are some holes near the top which are drilled but unoccupied.



The above diagram shows the component side of the Band Unit which is what you should see looking at it from the front of your radio. Note that the slot marked S01 is unoccupied. If your's has a switch on it, make sure it's open because it disables the 450-950 mHz bands if closed. If your radio does not have these bands, check this switch and also check to see if it has been hard-wired in the closed position.

The "x" indicated where the unoccupied holes are and the "........" indicates the jumpers you must make. If the jumper is already there, then you need not do anything to the radio. The jumper on the top left is to enable 905-950 mHz. The one on the top right is to enable the top right enables the 30-60 mHz range and finally the bottom right jumper enables the 20-30 mHz range. Note, I am not too sure if the mid HF transition is at 30 mHz, could be something else too. You can try for yourself, it is not critical since I put in all three jumpers for my radio. The holes are covered by solder already so you cannot easily insert your jumper wires. Ideally, use a solder-sucker or a solder-wick to remove excess solder from the holes to uncover it first. Do not apply too much heat as the surface mounted transistor nearby may melt or be destroyed. Once you have cleared the hole, slowly insert the pre-bent jumper wires into the holes starting with the one at the bottom right. Remember to clip off excess wire and do not let the wire drop into the radio and possibly short something. Use thin solder and do not apply too much. Make sure that your jumper wires are clean so that the solder will adhere to it easily.

The circuit of the Band Unit suggests that it is actually possible to enable a range even lower that 20 mHz. This is quite pointless however since the front-end is really not suitable for such low frequencies and it is unlike that you can hear anything useful even if enable. If you are interested however, contact me by e-mail. I'll give you more details.

Conclusion

Replace the cover after making sure that no bits of wire or solder are left inside the radio. Now you are ready for fun (provided you did it right). Try tuning from 19.999 (no sound) upwards and see if you get anything interesting. Usually you'll just get RFI. But when you reach about 40 mHz, you may be picking up cordless phones and walky-talkies. Once you are satisfied that works, try tuning from 905 mHz up and see if you get any cellular. Have fun while I study the circuits for more possible mods. I have received news that some FRG-9600s will not permit you to tune manually or by frequency entry, out-of-band frequencies. These frequencies can be accessed using the CAT controller program SCANNER.COM (or SCAN88.COM for XTs) with the very easy to construct interface. Meanwhile I will look into enabling tuning using the dial and keypad. This should be the next mod if its possible.

If you own one of these radios, you may want to check out my controller program and interface (easy construction) for the CAT control of the radio. The program brings FRG-9600 back into competition with the newest scanners.

I've received feedback that although the above mod allowed the radio to tune the entire range, the dial seems restricted. This restriction can be overcome by using the interface for tuning. Alternatively, you might try to reset the machine by turning off the battery for a couple of minutes to see if upon restarting, the MPU recognizes the new bands. This can be done by switching off the internal battery using the switch at the top right hand side of the front panel, under the top cover. There is a tiny slide switch there.

Have fun.

No, you Moron...but claiming that these posts were not cancelled is
asinine.
Sure, just searching for cancelled post generically doesn't prove a
thing, but when several AUTHORS of these posts complain what do YOU
think is going on?....
Yeah, I know...you're worried about the Black Helicopters full of men
with Purple Helmets....
Crawl back under your rock.

Not really.

With a lot of work, you might be able to turn the
last injection oscillator into a variable L.O.
that could be manually tuned over a small range,
but that's not what you're getting at.

So, no.... in a word. Steps are functions of the
CPU's firmware that cannot be accessed.

Gosh you can't buy this kind of reading anywhere else! This is some very good stuff sometimes! Great grammar most times, articulate, well thought out,, humorous to the point of chuckles and down right entertaining!!! This is one of my favorite news groups and has been for over 3 years! Mr Cheek, you are the king of eloquence though, for your responses to the serious and yet silly material on here....:)

If you don't like what Bill Cheek says or writes, why do you read his messages? You must be total MORONS if you think that a flame war will change anyone's opinion. Do you not know how to go on to the next message or, better yet, not retrieve a message at all? My reader lets me choose the messages I wish to retrieve. I also have filtering options so I can filter out spam and idiots. I read and enjoy Bill's stuff. I may or may not agree with all his political opinions, BUT SO WHAT???? Most of you people must be those "tolerant" liberals who are so quick to force your opinions on the rest of us, but want to shut down anyone who disagrees with you, just like you accuse conservatives of doing. A POX ON ALL OF YOU! NOW GROW UP!

Get ahold of Gerry at G&G Communications in LeRoy NY.

He fixed my for a flat $35 labor fee plus parts.

They are on the web but I dont have the URL.

Ed

Way Cool Post Leonard. Please DO ramble on as we have found
the same things out here (over many years) in regard to RFI/EMI
from computers and monitors.

Might I mention the subject of Grounding to keep you going...

Scan speed is related to switching speed
of PLL's, VCO's, bandpass filters, etc.
The faster the switching, the more noise
is generated.

That may not be the only reason, but it
is a part of it.

Motorola To Integrate Computer-Aided Dispatch Solution for Cobb County Cobb County, Georgia has awarded the Land Mobile Products Sector (LMPS) a $1.5 million contract to serve as the prime systems integrator for the county's new Tiburon 2000 Computer-Aided Dispatch (CAD) system. The CAD system is designed to assist 911 call takers, dispatchers and supervisors in handling an average of 275, 000 police, fire and EMS incidents per year in the county.

Cobb County's new CAD system will support approximately 1,500 Fire, EMS and police officers and link to Windows NT(R) workstations and run on Stratus Series 422 computers. LMPS plans to have Cobb County's CAD system fully integrated by June 1998.

Cobb County, which comprises part of the Atlanta metropolitan area and

City of Marietta, will use the CAD system for furnishing dispatch recommendations based on incident details, allowing dispatchers to assess and send units to an incident in a more expedient manner.

In a typical situation, a 911 call taker confirms the incident location and details and records them in the computer. Based on this information, the CAD system recommends the number of units and which ones are best able to be dispatched to the incident. The call taker sends the CAD recommendation to the dispatcher who considers it and then decides which units to send. The dispatcher can choose to accept the recommendation or override it, depending on the situation. Using the voice system, the dispatcher notifies units about the incident. The entire CAD process usually takes less than a minute.

>C>error? Any Ideas/thoughts? I would appreciate them!
>
>Maybe the scanner doesn't cover the aircraft band.

Gary,
You are correct--the BC55XLT doesn't cover the aircraft band.
But it's still a great little scanner for the money. I paid $100 for my
BC55XLT at a local discount store about 5 years ago, and I've never had a
problem with it. Still works great despite having been dropped several times.
By the way, the "e" which appears on the screen does mean "error." That's
the message you'll get when you try and enter any frequency which a scanner
doesn't have the capability to receive.

It's not quite in the open. Cathy DeViney's description of this mod is in the instructions for her Excel frequency loader, which is on my page. I believe there's also a description at Bob Hruska's page, which is linked.

Bill Cheek's description here is really nice. When I have a few minutes, I'm going to pirate it and add it to my page.

I have recently updated my Phoenix, AZ scanner information page. This page contains frequencies for fire and EMS operations in the Phoenix metro area as well as (unofficial) information about units, asignment types, etc.

In addition, the page includes a gallery of fire and EMS apparatus photos from the Phoenix area. 24 new photos have been added to the page bringing the total to over 50.

If you live in the Phoenix area, will be travelling to the Phoenix area, or are just interested in seeing how things are done here, take a look at:

We have operated E.F. Johnson LTR trunked radio systems for 5 years, we currently have 13 channels in operation, two five channel systems and one three channel system. They NEVER fail unless there is a power outage which one of the systems has a battery plant to prevent. In my opinion it is an extremely cost effective and uncomplicated system.

What is the IRIDIUM System?

The Iridium System is a satellite-based, wireless personal
communications
network designed to permit any type of TELEPHONE transmission--
Voice, Data, Fax, or Paging, to reach its destination--
Anywhere on Earth!

The Iridium constellation will consist of 66 interconected satellites
orbiting 420 nautical miles above the earth.

We had this discussion going on Scan-Mass-East. I hear them on Troop C's channels and once on statewide admin. Others report they may talk on their own 400 band freqs. On SPD channels they usually say "Good Sam" or the call will start with the number five.

The Kansas City (Missouri) fire department nearly lost two firefighters a couple of months ago when their radios failed to operate inside a burning house. Also recently, two KC police officers sued the radio company after they were shot while not being able to call on their radios. There are dead spots all over the city. It's obvious someone got sold a bill of goods and it cost us taxpayers $12 million for a "new, modern up-to-date Communications Center."

Rather than making comments such as this, and seeing as your
original post was laid to waste, full of halftruths, lies, and
inconsistancies., would you care to discuss the points
mentioned, or just make rude uninformed sniping attacks?

6356. LAPD Tactical Freqs

Newsgroup: rec.radio.scanner
Date: 1998-02-26 00:00:00 UTC
From: fmulder@bigfoot.com
Message-ID: <34f4f2b0.50678459@news.pacbell.net>
Source record: 169109

Recently LAPD has revamped their system of tactical (TAC) frequencies. Where there used to be only one channel per (TAC 7 for example), now they refer to TAC 7 Channel 189 (for example). Does anybody know the freqs for these 'new' tactical channels? Any input would be appreciated.

Thanx,

John W Mullen

IMHO, sarcasm like Bill can dish out, is very destructive of relationships. It doesn't matter if they are the personal or business type. And wether he agrees or not, a NG is a relationship of sorts.

Yeah. Bill does give out "clean" posts once in a while. I saw one today even.

But putting up with the sarcasm (and profanity), waiting for a useful post is too much to bear. I would bet that a shrink would say that the people who have left this group for these reasons, are much more healthy than the ones who stay. Kind of like the co-dependent of an alcholic.

Bill has placed some great posts, but I couldn't put up with him at the helm.

Let's not trash this "place", with anymore garbage (ie sarcasm) than we have to.

>>
>> Are ALL bearcat scanners this shitty or what?

Some of the Uniden made scanners that Radio Shack sold were
unfortunately cheaper quality dual conversion scanners. You basically
got what you paid for. Taking the antenna off to check out birdies
isn't going to going to always get you birdies. When repairing some
scanners, I have turned them on and gotten the local PD, sheriff, etc.
and the BNC connector wasn't even soldered onto the RF board on
Pro-43s. Unless you consider the local PD and the local cell tower
(both over 4 miles away) birdies....then I think there are other
things that are adding to your birdie list.
I wouldn't ever buy a RS scanner that was made by Uniden, I would
save the $$ and get the equivalent Bearcat model. I would then tend to
get a triple conversion at that (i.e. BC3000xlt, BC895xlt, BC235xlt).

>> I have a pro-2004 with an hb 232 interface and this is about the
>> best scanner I have seen!

There is quite a bit of difference between the Pro-2004 (triple
conversion scanner made by GRE for Radio Shack) and the Pro-2036 (dual
conversion scanner made by Uniden).

>I think you just seem to have a batch of lemons. I have a couple Bearcat
>scanners and have had no problems with them. I did have a Pro-46 once
>and wasn't very happy with that, but thats a Radio Shack scanner not
>Uniden.

Sorry to say, but that Pro-46 is a Uniden make with a Radio Shack or Realistic tag on it. When looking at a Radio Shack handheld, if it goes display, keypad, speaker, then it is usually a Uniden make. If it goes display, speaker, keypad, then it is usually a GRE made scanner. Uniden has greatly improved their scanners in the last few years. The newer models are fast, triple conversion, trunktracking and starting to see some computer interfaces.

I have to the first of the month to remome my outdoor anttena. If not my rent will go up $50.00 a month. It's a small Radio shack antena mounted to my meata storage shed in the back yard. We own our mobile home but do rent the land where it's parked. We pay school, hame and other taxes. My question is do the property owners have the right to demand the removal of this antena? An indoor tv antena doesn't work because the outside of the house is metal. The only other way I can go is local cable or Dss. Can the owners do this? Email me. Thanks.

My brother is a Utah Highway Patrolman, and the other day he was in the area and stopped by to show me his new state-issued computer. This is a laptop running Windows95 (which I thought was pretty scary) with some kind of wireless modem. It is mounted in his patrol car and when he logs in he has access, through a custom program, to state drivers license, motor vehicle, court, probation, and other information, as well as out-of-state motor vehicle and drivers license information, and NCIC. This is integrated with a program he uses to write citations. He selects the violation from a menu and the court from another menu, as well as some information about road conditions, etc. and then prints out the citation on a small bubble jet printer mounted just behind and between the two front seats. I believe that the citation information is automatically transmitted to the main office or to the court.

He can also send e-mail within the state system. He is behind a firewall, and for now he can't access the internet, but he says internet access, or at least internet e-mail, may be added in the near future.

This system eliminates a lot of paperwork for the patrolmen and speeds up the work a bit. It also reduces the amount of radio traffic, allowing the patrolman to see, for example, the entire drivers license record for a person without having to radio in for each bit of information. This frees up the dispatchers more.

It occurred to me that this system and others like it will reduce the amount of radio traffic. I'm not so sure this is bad since much of the information now transmitted to the computer made up the more boring radio traffic, leaving only the chases and similar action for the scannist to pick up. However, with trunked systems, encryption, and other technologies coming down the pipe, I wonder if perhaps the days of listening in on police action with a simple, cheap scanner are numbered.

If it's a television antenna, recent federal law prevents them from
making you remove it. However, it doesn't look like they are forcing
you to remove it, just requiring you to pay for having it up. At this
point my legal knowledge is exausted (IANAL) but I would bet it
depends heavily on what's in your lease. It may well be that imposing
a fee is contrary to the spirit of the federal law relating to
television antennas but I think you will need a lawyer to sort it all
out. If you can somehow get it to small calims court maybe the judge
will tell both you and the landlord the relevant law.

I've owned both. The only advantage the Pro 51 has over the Pro 64 is the backlight.
The 51 is an Image Magnet. If you like images, and love squelch tail, buy the 51.
I think the 64 is a fine scanner......excellent search tool.
For better performance, but fewer features, consider the Relm HS200 @ $179 through mail order.

Sure.

Hit MANUAL, punch in the frequency, open the squelch, hit one of the arrows.
That will put you in Direct Search mode, paused on the frequency. Closing
the squelch will start a search from that point. You then can hit the UP or
DOWN arrows to change direction.

Geezus......is the SC-150 a diminutive part of your
anatomy, by some chance? Sounds like it. Did I offend
you? Do you think every scanner should be touted as
a great scanner? Do you think I should lie?

What if I answered in the affirmative to every question
ever asked of me? What would spew from your cavernous
jaws, then? Perhaps you'd say that I was afraid to
tell it like it is?

Take it or leave it....but the Sportcat is a yuppie
sizzler.....slick and wicked looking, but rather
impotent on the inside where the steak ought to be.
No lugnuts. Hairless. Milquetoast.......

My professional opinions of various and sundry scanners
have nothing to do with peddling books. If you'd prefer
that I not write any more books, perhaps I can
accommodate you.

People like you are utterly disgusting....and I'll tell
you right up front that your money's no good to me.

I don't want it....so make like your diminutive member
and beat it.

Comprende?

Oh....and by the way, Thunder Mug Jaws, cellular mods were only a very tiny part of the contents of my books. Cell mods never were the focus. There is a hell of a lot more that can be done to scanners than cellular mods. But idiots like you don't have a clue.......and I'm not about to enlighten you.

You can receive the rest inbetwixt channels. The
PRO-43 has a 15 kHz IF bandwidth, more than ample.

What about YOUR sarcasm? That's okay, I suppose.
(It always is.....)

> Yeah. Bill does give out "clean" posts once in a while. I saw one today even.

You'd see more if there were a higher ratio of decent
people to assholes here.

> But putting up with the sarcasm (and profanity), waiting for a useful post is
> too much to bear. I would bet that a shrink would say that the people who have
> left this group for these reasons, are much more healthy than the ones who
> stay. Kind of like the co-dependent of an alcholic.

So where does this leave you?

> Bill has placed some great posts, but I couldn't put up with him at the helm.

You wouldn't. You'd be gone with a Size #13EE crosswise
over the seat of your britches. You and Smacksie could
cry in your beers and fingerpaint together in the puddles
on the bar. And console each other. And conspire to
start a newsgroup to cuss and discuss that Billy Bad Ass.
Ummmm hummmm. I've seen it all.

> Let's not trash this "place", with anymore garbage (ie sarcasm)
> than we have to.

But.......YOU.....just "had to", huh?

I get it. You're different. Things are okay for you that are not okay for others. You're probably even a preacher out there in real life, huh? Help people with their problems and tell 'em what to do to make their lives right?

Ri--ght.

I have successfully connected in to the discriminator output of my Bearcat 580 XLT but I'm not having any luck doing the same on my AR1000.

I believe that the connection to use is pin 9 on chip TA 7787 AF. I have tried this but get nothing. The chip I am connecting to is facing you when you remove the back cover. Is there another similar chip somewhere else on one of the other boards?

Any advice would be greatly appreciated;

Peter.

6384. Orange County, CA 800Mhz Public Safety Radio System

Newsgroup: rec.radio.scanner
Date: 1998-02-26 00:00:00 UTC
From: Lost Soul <"Lost Soul"@home.net>
Message-ID: <34F547FD.76FC@home.net>
Source record: 169187

The NEW 800 Mhz (866-868 Mhz) Trunked Radio System is assigned the
callsigns of: WNSS311, WNSS312, WNSS313, WNSS314.

This radio system is RUMORED to include EVERY county agency that is
currently not on 800 Mhz. This means that the dog catcher and the
street maintenance workers will be on the same frequencies with
the sheriff deputies.

The county GSA radio technicians should be testing this system soon.

It is unknown at this time wether it will be a Motorola, Ericson/GE
or maybe Harris system.
Click this icon here ---> http://www.rfcomm.com/index.htm .

Go to the PerCon frequency database page,
http://www.perconcorp.com/db_srch.htm
search these callsigns, wnss311, wnss312, wnss313, and wnss314.
Next, load the freq's into your radio.

The Orange County Fire Authority (OCFA) has the callsign of wqz938,
with freq's in the 856, 857, 858, 859, & 860 Mhz range.

Does your Trunk Tracker work properly with the OCFA radio system?

Here is the next question.

Are the Uniden Bearcat Trunk Trackers compatible with the new
866-868 Mhz Orange County Trunked Public Safety Radio System?

-- Lost Soul --

6385. None Standard Trunks Buzzing

Message-ID: <34f54aa6.18775823@news.cybrtyme.com>
Source record: 169188

Hi, I was wondering if anyone had come up with a circuit to cut off or filter out the load 'humm' that comes about every five minutes on all the 'non control' channels of out new local police trunking systems. I don't know what type trunk it is, but I do know that is is not a Motorola and the 'trunk tracking' radios will not follow them. I've heard that they were signals that told the police radios what channels to change to. We have 10 audio channels, and it starts with the lowest frequency and 'buzzes' loud for about 10 seconds, then goes to the next frequency and repeats until all 10 are 'buzzed'. It's no problem picking them up but that d*~n buzzing gets on your nerves. I have a RS Pro 43 & 60, and looked at a bearcat with the trunk following feature, but the salesman was honest enough to tell me it wouldn't work here and I'd still have to put up with the humming. I've looked at the signal coming out of the speaker and it is a PCM looking signal, and I'm thinking about building a 555 timer to detect the short pulses and put the circuit in a separate speaker enclosue and plug it in the earphone jack, then I thought maybe someone on here had come up with a better solution. Ideally, I'd like it to end up internal to the PRO 60 and just press the 'scan' button when the signal is detected so I wouldn't miss other action. Many thanks in advance..... Bill ... Just a buzzing.... ;>(

> >I'm pretty sure that I will buy the Pro-64, but I figured that I should
> >check what you folks had to say first.

Your best bet is the PRO-64. Triple conversion and good interference
rejection for urban/suburban users. Lots of channels and features
including auto-store and computer frequency download.

PRO-51 is a nice, fast radio but is only double conversion and gets
lots of images and interference in strong signal areas. Squelch
tail is very annoying too, as John implies above.

The RELM HS200 is a very nice radio. A bit big though. Very
sensitive and good intereference rejection. Comes with a good
antenna, great audio, well made, CTCSS/DCS, S-meter and keypad
backlight. Very fast too. Doesn't have the "high-end" features
of the PRO-64 but is a very worthy candidate nonetheless.

I have reviews of the PRO-64 and HS200 at my web site if you'd
care to read them over. If interested, go to my home page
below, follow the radio monitoring link and then page down to
find my table of receivers. Take it from there.

Happy reading and good luck with the decision!

Source record: 169191

Yaesu50R wrote:
> Hi experts! I read recent posting about Opto Scouts and Explorers. What does
> the scout really do in practical terms or experiences?

They are frequency counters. While designed to be used as test
instruments
for testing the accuracy of transmitters and such, the market is now
catering
to scanner enthusiasts...especially Optoelectronics with the Cub, Scout,
R10,
R11, Xplorer and so on.

Designed to sweep a VERY large frequency range in a VERY short period of time and display the frequency of the strongest signal found. They can be used simply to monitor for errant signals or, as is usually the case, they are used to ferret out the unknown frequency of a particular agency whom you've been unable to locate by conventional means(FCC records, databases, local lists, etc).

> Are they worth it to work with an R10?

They are if you have the need to use them often enough and take the time and patience to use them effectively. Most users are under the false impression that they are some form of magical device that will capture exactly what they want and when they want it. Far from it. It requires knowing some basic theory, signal strengths involved, the local area RFI, tuned antennas, transmitter power, filters and so on.

The Reaction Tune designed by Opto can be used on the AR8000, AR2700, R10 and their Opto boards for the PRO-2005/2006/2035/2042.

This month's Monitoring Times(Mar '98) has a good article that should be read about counters and using them for intelligence gathering.

> What is their reputation about durability?

Opto's counters are well made and should hold up as well as
any other electronic device. I have only had experience with
the Scout I own, but it is built well and performs nicely.

> Are the scouts blocked?

Not the Scout or Cub since they only display a frequency. But the R11 and Xplorers are since they also demodulate the displayed frequency signal thereby allowing you to hear it. Thus the need to block the cell freqs on such models.

I believe all of them only work on FM signals. No AM.

> Who has best price?

Price is pretty much fixed by Opto from all the prices I have seen which are all at $150(Cub)/$400(Scout)/$900(Xplorer) these days I think.

They also have a new micro model(TechToyz) which has gotten pretty good reviews and is about the size of a pager.

> > > >now.

Yes, it is a common problem - probably the best way to avoid the problem
is to use a different antenna on the unit, rather than the one that came
with it...

RS's telescoping whip seems to work well on my scanner, and I don't have
to worry about the pin breaking off in the radio...

I find it easier to use one of the search limits for a pseudo-VFO.
Simply press PROG, then LIMIT. Use either limit to try out a new
frequency. Note, this is for listening, not for searching around
as is accomplished by the method John describes above.

The earlier model 706 have an inherent defect in the 2 meter module. If
you go to the Icom webpage and go to the tech help section, there is a
fix that involves replacing several components. One of the additional
benefits is that your RX will improve 100%.

Relm WSH 150 For Sale
It comes with plug in charger, antenna, belt clip
and battery. It also has full instructions. It is in excellent condition.
one of the best parts about it is how easy it is to program. All you have
to do is switch a switch inside and use the front keypad.

I am asking $300 plus shipping(probably less that ten dollars depending on
where you live including a COD charge.)

148-174MHZ
5 watts
16 channels
synthesized
battery saver
time out timer
1 and 5 watts switcheable
15.5 ounces
(H*W*D) 6.4in*2.45in*1.3in
dtmf keypad
dtmf encode/decode
scan
priority
ctcss encode/decode built in
programable ani

It is in excellent condition.
thanks

What kind of problems do I have, Smacksie?
How is it a problem to slap a booger out of
your schnoz and feed it to you?

I don't have any problems, Smacksie.

Excuses? You're stupid. I didn't need any excuses.
Do you need excuses to evict someone from your
property? No. Likewise, I just gave you a resounding
kick after several warnings for you to shape up or
ship out.

You flew out. You flew through the air with the greatest
of ease...just like the man on the flying trapeze....

> Actually, Bill, I FAIL TO UNDERSTAND WHY you are bringing
> up this Fidonet issue again. CHRIST, this was nearly
> 2 years ago, CAN'T you let anything go?

No, you let it go. I am the winner. You are the loser.

<snickering & cackling>

It's the losers who are supposed to have a good cry; then
pick themselves up; dust themselves off; and "let it go".

Me....I don't mention it much anymore except when others bring it up.....or when I know you are watching.

It stick in your craw so bad.....which gives me great delight, Smacksie-baby.

YOU let it go, wimp. :-))

When the CVS Samaritan was doing the traffic reports for WGY here in the Albany area, they would use 450.1125 which was WGY's remote broadcast frequency. When WGY started using another service, the Samaritan started doing traffic reports for another station and as far as I know was using a cell phone to call it in.

Our local "Samaritan" was a licensed ham so he could often be heard on a local 2 meter repeater or on CB channel 9.

My best guess is to look on the frequency used by the local radio and/or TV station that utilizes the Samaritan's service.

Joe

>things that are adding to your birdie list.
I realize that a few of these birdies could have been form
something else but they were the ones in the 800-900 range all the
ones in the 29-512 range I listened to and they were birdies not some
local transmission, I realize that some of them were so close that
it was more than likely just one birdie but so strong that it was very
wide .

ANyways the reason I bought it was because it had the tone board in
it.

Also can anyone tell me if the mod to restore the cell phone int he
890xlt will work in the 2036?

> I wouldn't ever buy a RS scanner that was made by Uniden, I would

Rich,

Where might I view these freq counters, if that is what they are?

I had occasion the other day to want to listen in on a radio transmission from a public works truck back to his base unit concerning the replacement of one of my sewer pipes. I suppose the Opto units you were discussing could have made it possible for me to have determined the freq they were talking on and been able to tune it in on my scanner, right?

Thanks.

Charles

Ken,

Did he have his credit card swipe unit and cash register with him,
too? <G>

Soon enough I suspect most states will do away with citations all
together and just allow the officer in the field to collect for the
violation(s) charged on the spot. No trial, jury or administrative
hearing. Isn't it going to be wonderful when this scenario plays out?

Charles

Thanks for the info, I modified my pro-26, although mine was one of
the epoxy jobs. I just tapped the circuit traces further out of the
board and added a small switch in the batt compartment. I can now
switch between the mod on and off on the fly.

Cheek admitted he was looking for a flame war when he took Mackey OUT of his kill file a few months ago. Guess he's got nothing else to do. It was nice and civil here for about 7-8 months.

Mackey, on the other hand, doesn't need to admit it. That's ALL he does. It would be a cold day in hell the day he posts something of relevance.

Both of these tards could just plunk each other in their filters and be done with it. BUT, you notice that hasn't happened. <---(Open door for classic Cheek ranting)

Hey, uh, Bill. Psssst. Comere. *slap*!!

You CAN'T cancel someone else's posts under your own name........

You have to forge lots of headers to even create a valid cmsg in the first place. Then, you have to figure out a small obstacle. Like, how do you force a server to accept cmsg when they don't? Answer - you don't.

How many times does it need to be spelled out for you "snotball" ? (I do like that name!)

I am looking at buying the MFJ1828 antenna for a VHF Lo band receive and 6 meter trans antenna. In the ad it claims that it works as a 'resonant 1/4 wave on 30-50 mhz'; the question is, is it? And has anyone tried it on 6 meters?

Please reply to ka3jjz@erols.com. 73s Mike

Hi Ken,

Scanstar by Signal Intelligence has an add on audio logger as a companion to their Scanstar program for the Opto 456/Pro-2006. It writes directly to the hard drive and works pretty good. Although the last time that I requested technical help I didn't even get an " I dunno.. " from them. The Scanstar package works pretty well overall but has a few glitches.. It was worth the money spent in my opinion... Best wishes.. Mike K8MB

The ReCall audio logging program works really well as a standalone
program and can be tried out for free. It is avaulable on the net as
shareware and seemed to work quite well when I tested it.

Steve

That's the idea, all right. But tell me how interested
in scanning are Mackey, Boe, IWSTIRN, and spammers? I
can't imagine knitting and crocheting freaks being a
helluva lot different. Nicer maybe. Definitely nicer.

I didn't miss his point. Trouble is....such a place does
not exist....EXCEPT in private mail lists and moderated
forums like on FidoNet where there they call it 'censorship'.

You can't have it both ways. You got a free forum like
this one where you takes the salt and the pepper together,
or like a mail list or Fido where you get your ass kicked
off if the Moderator doesn't like you or if you break the
rules, whatever they are.

> > Those who don't and won't contribute have the

> > especially about a FREE enterprise..... Sure,
> > there are always lurkers, and that's fine.
>
> Says who?

Says who what? That lurkers are fine? I do. I don't
care if people lurk and don't post. But if the only
time they post is to whine, snivel, and complain, then
I sure ain't going to attach much value to it. I'll
listen if the guy is decent about it. But hey....
get real. If they guy doesn't contribute, I sure as
heck don't owe him anything. Some of 'em complain like
this newsgroup owes them full dollar value. Sheeeesh!
That is kind of ballsy, if you ask me.

> > But if they don't post except to snivel and blow great

I know. I admitted that. So I went on to elaborate
in my last post. Just for you, pal. :-)

> > Anybody with an asshole for an eye can *see* that I can

> > that, else the actions of one just go to waste.
>
> Ah, a quest to save he USENET world?

Not me. Do I look like I'm trying to bring salvation to
the Usenet? It's the preachers and snot-bubble-blowers who
seem to be calling for a messiah to descend down a cloudy
stairway........ and if that's what everyone wants, then
I stated it would require a collective effort. I didn't
suggest that I could do any "saving". I have hard enough

time saving myself, much less anyone else.

> > By that, I mean - so I filter out the Mackey's, the Boe's,

>
> The Hansen's eh? Oh, I get it.

Good. I hoped you would. :-)

> >It doesn't help the Cause, though.

> Cause? What cause? Does this cause have a name?

I don't know. You seemed to be alluding to some sort of
a grandiose salvation and life here-ever-after. I'll go
along with you only to the extent of me not having to be
some lightning-bolt throwing messiah. I chucked a lightning
bolt up Smacksie's patooty a couple of years ago and he's
still here, alive and well. So we don't need me being a
Saviour or anything like that.

Otherwise, "the Cause" *seems* to be scanners and scanning.
I thought that was the topical drift of this forum, though
admittedly it is hard to tell sometimes. When I say "the
Cause", I mean scanners and scanning anyway.

> Nope.

Somehow, I didn't think so. But thought I'd ask.

Anyways.....what's your point? Me, I have no problem
popping snot-bubbles with my left hand and typing about
scanners and scanning with the right hand. Some people
are into scanners and scanning and I chat with them.

Some are into flinging dirt and road apples, so I
chuck 'em back. Who cares? What's the tiff? What's
your position in all this? You and Smacksie seem to
have a considerable history of peeing together, so
I'm relatively certain YOU aren't out to "save" the
newsgroups. Or HIM.

But I'm not sure WHAT exactly you're out for, so help
me overcome my nescience, please. You know THAT word,
now don't YOU? Remember when I laid it on you on the
SHORTWAVE forum over in Fido about 7-8 years ago?

Heh heh heh........

:-)

Ordinarily you don't get "halfway decent" scanners
for under $300....but Radio Shack has a closeout
on the PRO-64 and PRO-2041 for $150, I hear. Now
those are "mamma jamma" scanners, but the price
is right.

You ain't gonna beat it, anyway.

I haven't seen any mod's or keypad tricks posted for the SC150. I do know that you can check your battery charge level by holding down the W/X key and L/O key at the same time and turn on the scanner. The level indicated gives you the battery charge remaining in the scanner. about 1.7 is fully charged, anything below 1.5 is getting close to recharging time. JJ

Source record: 168947

Yeah I found a few.

When doing a 2VFO scan, if you go up instead of down on the search, it will not scan the last frequency.

Don't try to tune below 100KHz, it will lock up the radio! Even "turning the unit off" will not blank the display, you have to remove the batteries!

Manually entering a frequency when your current settings include a 1/2 step offset, the unit will "correct" your frequency to the full offset instead (i.e. your spacing is 200KHz, 1/2 step offset, so you should be able to enter 101.5 MHz. It will change the 101.5 to 101.6 when you hit enter! (Using the VFO dial after entry will correct)

The ARRL handbook has a schematic for one. Remember also that the R7000 needs to provide a hardware unsquelch indication back to the computer (ICOM appears to have "forgotten" to include an unsquelch opcode in this radio). The tape recoder relay output is usually used. This isn't shown on some of the schematics. This is usually done using RI or DCD depending on the software that you are using. The MAX232 chip has an extra line driver output that can be used for this. The Optolynx also provides this capability.

The most recent example was last December, in your unprovoked attack
on KUT7BH.

This post is also a pretty good example. I read what this fellow said
to Cheek, and it was hardly a personal attack. It was more an
expression of sadness that someone whose writing and advice he admired
had turned out to have feet of clay. Cheek, of course, could have
addressed the comments in a rational manner, but instead chose to make
a massive escalation with a long, sophomoric personal attack, complete
with many crude anatomical references.

>You got the jaws....now let's see if you have a brain.

[balance of typical lengthy crude personal attacks by Cheek snipped]

Seeing as you also have a pro-26 scanner, may I pose a few questions to
you as to how this scanner operates?
I think the pro-26 is a fairly good scanner, but it's audio capacity
sucks! it's not very loud, and sometimes in a moderately noisy room I
practically have to hold it to my ear to hear the transmissions. Do you
know of anything I can do to help amplify it?

Also, I have a base unit as well, a Realistic pro-2036, which gets cell
phones. However the pro-26 doesn.t Do you know of anything I can do to
modify it to receive cell phones? Do I have to go under-the-table to
get it modified, or is it something I can just do myself?

From: NOSPAMmikek@deltanet.com
Message-ID: <34f7505d.14703960@news.deltanet.com>
Source record: 168954

Orange County's new 800MHz. system is a Motorola type II digitial trunked system. Astro Sabers and STX-3000's will be the portables and Astro Spectas will be the mobiles. The system is very 'cellular' in design and no radio will need more that 7 watts RF output to make it.
Most systems will be digital and render scanners useless - even trunktrackers.
You are correct that the dog catcher will be there, as well as all city police and fire and county agencies.

Sgt. Mike Krueger - KC6ZSF
Orange County Sheriff Communications/RACES

From: Charlie Dwenger <cdwenger@hsonline.net>
Message-ID: <01bd43df$f92ebe00$LocalHost@default>
Source record: 168955

Mr. D.
Hummmm, Would I take advice from John Mackey? he he, hah hah ha , <
roaring laughter>
That`s a good one !< snif, snicker> Let me think. OK, here goes, This is
some thoughts about Mackey Mouse,
1) He is a legend in his own mind
2) Always has to have the last word
3) Never has anything to say, but takes up the most band width saying it
anyway
4) has only 2 friends (1 of them is his mother, who don`t like `em either,
but does have state custody on vacations from his *rubber room* at Hotel
Happy)
5) has only a guy named "irswirn" , or something like that, to share a nice
NEW bed with
6) Walks in circles mumbeling *Cheek and his #$@!**& metal screwdriver did
this to me*
7) When not smoking crayolas, think he can build a nuclear reactor from an
old coffee can and a box of macaroni & cheese
8) Never lets the FACTS interfere with his opinion

He is good for a couple of things, so he`s not a total waste. I`ll let you
figure them out. Do let us know if you do find them, OK?

Don`t be surprised if he try`s to give you the *hot seat*, his only legal
pass-time is flaming people. His shrink said it has something to do with a
small weenee and a big ego.

Well, any way Tyrone,(?) Welcome to rec.radio.scanner. Feel free to ask
questions, give answers or just shoot the bull, but please, talk about
scanners every now `n again, OK? This is a good place to find freq`s. &
other info like mods for your type of scanner. For the mods, I highly
recommend talking to Bill Cheek. Best in the biz.

Again, welcome, Have fun & Happy Scanning,
Charlie

Ray
Might read up on a WINRADIO. From what I`ve read it`s a plug-in board
with soft ware that really is nice. The post I`ve read are mostly on the
good side but I did read one that said that it was as deaf as a post below
30mhz, but I don`t have first hand knowledge of that.
Now if you want to listen to police & fire from other places like LA or
NY, you can go to http://www.policescanner.com and listen to alot of
action. Hope this helps,
Good Luck & Happy Scanning,
Charlie

Does anyone in VA have the frequencies for Langely high school in McLean? I live near here and would like to know what they talk about on these radios for curiosity's sake. Sorry if anybody is reading this a second time but I can't find it when I log on to this NG. (ignore the newbie part please this is not my computer)

I had read your review, and it was one of the reasons that I was strongly for buying the Pro-64 over the Pro-51. I'm going to be at the Radio Shack when it opens, as it has been rough at work the last few days having to listen to the regular radio when I could be keeping up with the more interesting happings.

Even though I don't plan on "USING" most of the extra features, I
think that it would be to my advantage in the long run to have them
anyways.
For some reason, with certain items I try to avoid going the MAIL ORDER
route unless I have to. I think that it's the thing of being able to
deal with someone "face-to-face" when it comes to spending my money. I
don't buy anything over the Internet, or through Mail Order.

> cheap scanner are numbered.

Don't hold your breath. In-the-clear radio transmissions will stay with
us for a long time. #1 reason being officer safety. I don't trust
encryption only because if something goes wrong with one of the radios,
the message simply ain't gonna go thru. Up here, they have an MDT
system in place. The dispatcher sends out the call (nature, address,
other pertinent info to keep the officer's eyes on the road, etc...)
over the radio, and the details from the 911 operator are on the MTD.
This eliminates 90% of the boring garbage (license/warrant checks) and
keeps the air open for more exciting things. Most confidential matters
before the MDT's were conveyed via cell phone or conventional landline
anyway, so we're really haven't missed out on much.

Exactly the Sportcat 150 is NOT mentioned in any of your books and you seem to have a certain dislike for the scanner. I think I might be on to something here but no modifications for the scanner so you discourage anyone from purchasing it...

> But you sure felt beholden to issue your cute little

Well where do I get off spouting my "brand of bullshit" basicly just denouncing your own brand of bullshit which is nothing more than than that. Seems that the problem is you just cant take a critic. Somebody disagrees with you and its an all out war. Personally I know I have seen plenty of the BS postings here and think its time that we all realized what we are subscribed to this newsgroup for.

Title says it all ...

Anyone care to comment on the relative plusses / minuses of these 2 combos
for computer aided scanning ?

Radio Shack Pro2042 with Opto535 board installed

vs

ICOM R8500 with the Opto DC440

Other than the ICOM costs a lot more :-)

Software most likely is ScanStar Industrial. Usage is managing channels
and understanding the surrounding spectrum in an industrial mfg site.

Thanks

Hello to all;
Thanks for taking the time to read and respond.
I have for sale an AOR-3000A wide range receiver.
100 Khz to 2.036 Ghz without gaps.
Narrow FM, Wide FM, Am, USB, LSB, and CW.
400 memory channels in four banks, 20 channels per second.
Frequency increments are selectable in 50 Hz steps from 50 Hz to 100 Khz.
Computer control possible with built in communications port.
All manuals, A.C./D.C. adapters, software for computer control included.
Receiver is in very good condition.

********** BEST OFFER **********

And i'll toss in a little something extra !!!!!
SERIOUS inquiries only please, no gee will you sell the software or whatever
buy it's self? NO, the whole thing is a package deal!
Leave me a message .....

Regards Fulton

> what? When they speak, they usually have something they feel is
> important to say.

I'm sure everyone who says something feels it is important.

My question was more philosophical in the sense that if
you don't CONTRIBUTE, then what's the opinion worth? You
didn't address that, though the balance of your reply
certainly had its merits.

> The opinion I gave is just that, an opinion on a NON technical
> subject, but one on human nature.

Oh. I see. Well, I don't really have anything to say
to that. I don't like to argue or even discuss opinions
as much as knowledge and facts. If you think I ought to
wear green, that's fine....but checking my birth certificate,
I don't see any requirements of that nature, so I do hereby
beg off from participating in any interaction that's designed
to alter my course through the Cosmos.

> So here I sit, in front of the PC with two scanners, about to crawl
> back under my rock

Oh. Bummer. I figure folks who are so quick to
fire off an opinion would also be quick to pitch
their hat into the ring to do something demonstrable
about whatever elicits that opinion.

But anyway, I'll repost that message of mine that
got cancelled so that you get to see it.

Hmmmmmmm. No offense, but lacking contribution of any
substance, how would you rate the value of your opinion?

> There has been a running feud in this newsgroup for a long time. I
> don't CARE who is right, who is wrong, and what the history is.

There's your first mistake. First of all, it isn't a feud.

Secondly, you *do* need to care about right and wrong.
Suppose, ferinstance, YOU had been wronged....say incapacitated
by a hit & run jerk. How would you feel if people said they
didn't care who was right and wrong?

Thirdly, history is very important. Those who don't learn
it are doomed to repeat it.

> Our hobby has been under attack for a few years now.

Right. About 90 "few" years to be close......

> It doesn't matter that we believe that we have a right to our hobby,

Right. Hobby is subsidiary to the real thing.

> If we don't stick together, we WILL loose our right to own scanners.

Gun owners and advocates say that, too.

> Heck, the second
> amendment says the right to keep and bear arms shall not be abridged,
> but society has decided they want gun control, and they got it.

Yes, I see you do understand........

> If they want to ban our scanners THEY WILL, unless we stick together.

They will whether we stick together or not. We are outnumbered
10,000 to 1. Or worse.

> This newsgroup is public. Our foes can read it. They probably do.

Maybe. There are over 30,000 newsgroups, though. Our little
"sandbox" isn't any different from the rest.........

> It makes us, as a group, look like a bunch of spoiled brat children.
> Half the posts are people arguing, most of the rest are "How do I

> modify my scanner to pick up cell phones?" - If you told someone how
> to make a M-16 (full auto) out of an AR-15 (semi-auto), you'd end up
> in jail. They have made new rules, and we have to live by them,
> and/or fight them as a group. Fighting among ourselves doesn't help.

Perhaps not. But newsgroups don't work in the same fashion as
clubs and organizations. You can't just hop up on a stump here
and get anyone to pay attention. Some will agree with you and
leave it to you to fund an initiative. Some will disagree with
you and attack the hell outa you. And since the squeaking wheels
can be louder than the good wheels, you'll wear down and go away.

Or.....you might come out teeth bared, spitting vinegar and blowing
fire out your nose and take off some snotball's head and shit down
his neck.

In either case, it just won't matter. Newsgroups are not suited for
stumping and starting "million man marches"..... and since every
participant is *immune* to the ravages of others, you just CAN'T
"hurt" anyone. Of course, they can *choose* to be hurt, but that's
their choice; not yours. An utter wimp can hurt people who choose
to be hurt. On the other hand, a bad-ass can't hurt the wimpiest
of the wimps who don't want to be hurt.

> I don't really expect this to make any difference.

It won't, believe me. Your efforts and intents are slightly
misdirected.

> I don't know if
> this will get canceled (Censorship _IS_ wrong). But I have to say my
> piece. I _DO_ know that this has started to turn me off to the hobby.
> I'm sitting in front of my scanner as I type this, and guess what?
> It's off, and hasn't been on in a week.

I don't understand that. What relationship is there of a scanner and
what goes on *there* to this newsgroup and what goes on *here* ? None
that I can see.....

> We're turning people off - our potential allies in this fight, and
> we're giving out foes lots of ammo. For the good of the hobby, think
> about what you say and do here
>
> Soapbox mode off, asbestos pants on

You're not likely to get any flames. Mostly people will just ignore
you. I mean, you talk a good story and it's almost possible to see
the beads of sweat breaking out on your brow and the veins down your
neck popping out. But you just can't "reach out and touch someone"
here like you can at a club meeting or even up on a real stump. People
will nod their heads and mutter, "Yeah.....right." And that's about
as far as it will go unless you trip some sicko's trigger, in which
case you'll get barked at and sent whining.....

Me....I don't give a hoot except to say that I kind of agree but this is the wrong forum for your agenda. This is a virtual forum where most participants operate under a pseudonym and/or a bogus e-mail address. This isn't a real "place" and it's just not suited to promote real action. It is populated by a mix of stalwarts and some very real sickos, though, the latter of whom are a fact of Life that you have just got to accept.

Next, you have to learn how to harness the power of your computer to make it do what you WANT it to do. If you want to be a victim of this "feud", as you put it, then you're free to be victimized. Just don't whine and complain about it. But if you don't want to be a victim, then use your computer to create the FORCE to protect you. You don't have to participate in the "feuds". You don't have to read them. And you don't have to even be aware of their existence, if you don't want. Such is the power of your computer.........

Newgroups are a "place" where you can do what you want to do and even BE who you want to be.....so long as you understand virtuality, and can be content with "virtual results". I mean, if you want to be a stumping politician,.........hell, you can. But you can't expect real results.

About all you can realistically expect is to get a bit of relatively free information about scanners and scanning. If you do nothing more than lurk, then you've no right to complain at all. But even if you are a contributor, you'll have to freely give up your right to complain, simply because you are entitled to what you pay for.... and this forum is FREE. It doen't convey any entitlements.

That's about it, pal. Come in here all you want. Take a little; leave a little; but don't expect this place to resemble "reality". If you can get over that hurdle, then you should find some value and contentment.

If it's a "million man march" you want to start, well.....more power to ya, but you're wasting your time *here*. You'd be better off doing some talk shows; rent some newspaper space; put up a Web site; run for Congress, etc........

IMHO......

Quite often you will hear the CVS Samaritans on the State Police 800 MHz Trunking System. Most of the vehicles are number 5260 through 5280.

Good luck.

yes this is a great scanner. i just bought one for myself. A trunked system is one using a computer to control a vast amount of radios(police, fire) to change freqs every now and then.. In the case of the radios Dade County uses, the system changes freq. everytime a radio is keyed up. And no trunktrackers currently follow the ericsson Ge system

The antenna that comes with this scanner isn't bad. But as any scanning anything will tell you, the antenna makes or breaks your fun. I have an RH77CA from Diamond Antenna on my Pro26, It is about 12inches long, but it works very well. It costs about 70 dollars or so...

What system do they use? I use the GE Ericsson trunked system in Dade County, and GE or Ericsson, whomever actually still owns the rights to the system here, is have great troubles getting it to work, and have not yet made their codes available....this from one of the radio techs working on the system. So if the locals in your area use the same, your SOL...sorry

> in this hobby then why drive them away with these crude and rude insults.

Okay, I just don't get it. Where have you seen
me insult ANYONE.....who didn't shoot at me first?
You got the jaws....now let's see if you have a brain.

> Maybe some of us work hard and have to scrape and save for EVERY penny we can
> until we have the money to get a scanner, and if the SC-150 is the first one
> then so be it,

You betcha. But DON'T ask me about it, if you
can't stand the truth as I see it. You didn't
ask....but the other guy did....the first poster
to this thread.

> if the person has true interested they will later see that it
> is a great scanner, however; to go farther into this hobby they will learn
> that they need a better one.

You just don't get it. The SC-150 is not a great
scanner....not by any technical standards of
measurement. It definitely has a lot of "sizzle",
and if you like more sizzle and less steak, then
it is THE scanner for you. So what. Some guys
like sizzle. I ain't judging sizzle. But I happen
to like steak. You don't. That's cool.

Telling the truth about scanners is not insulting
to the poor sap who is about to buy one..... it's only
telling it as I see it. You expect me to lie about it
just to give you a warm fuzzy? What if the guy I was
answering wanted the damn truth? HE ASKED. You didn't.

> Notice they will learn, not be harassed by some
> rambling on of someone who I (along ith many others I am sure) have lost all
> respect and dignity for,

So go find it if you lost it. I didn't insult you. I
didn't do anything to you. But since you felt fit to unload
on me for telling the truth, you will surely understand
when I invite you to eat my shorts. Do you prefer boxers
or briefs, and BVD's or Fruit of the Looms?

If you think I'm going to dance and jig for your "respect",
you can observe the mistletoe attached to my shirttail and
act accordingly. Pucker up, Bunky.

> due to his ill, and obnoxious attitude to everyone
> that even makes a statement/question that THEY want a REAL answer.

Huh? The original poster asked: "Are these radios a good buy?"
to which I replied: "If you like a lot of sizzle and not much
steak....sure. Otherwise, no."

So what the hell do you see so bad about that?
The guy asked. I answered. And I didn't insult him.

But then comes along an imbecilic idiot, who just HAS to say:

>> Ahhh, I see Mr Cheek does not approve of the Sportcat 150, must be
>> becouse there aren't any cellular mods for it and thus cannot profit
>> from it in anyway by selling more books.

So yeah, I hosed the jerk. He opened fire. He
had no call to show his butt like that. But he did
it anyway. So I hosed 'im. So what? He hadn't oughta
be shooting off his mouth like that.

> And before you start, no my sc-150 is not attached to me at all,

Cool. I was thinking maybe it was attached, the way you hyped
yourself up into a big ol' snit. You act like of like it is
a part of your anatomy that you can't help bein born with.

> but obviously your attitude and ideas have changed drastically
> from the ones I read in a book so few years ago.

Not at all. You must not have read the book all the
way through.......just like you must not have read this
thread all the way through. Or....can you not read?

> It is sad that someone MIGHT have actually thought that B. Cheek
> could give sound advice,

Okay, so I can't give YOU sound advice.....especially
if liver-lipping the Uniden SportCat SC-150 is considered
to be "sound". I don't mince words, wingnut. Go find
yourself a baby-kissing, mush-mouthed politician if you
want blubber, froth, and goosh about your SportCat......

> and no I am not saying we ALL need to get one of these,

Cool. It is a good thing you're not saying that.
It was beginning to look like you had a little shrine
set up at home with your SportCat sitting betwixt two
candles under a picture of your preferred deity.

> but damn... if we treat everyone as mentally deficiant humans
> with no care for ANYONE then who the hell will want in the hobby PERIOD!

Who the hell treated "everyone as mentally deficiant humans".
Where do you come up with spew like that? Geezus H. Kriste,
NumbNuts, the guy asked if the friggin SportCat was a good
buy and I gave him a straight answer. Simple, sweet, succinct,
and to the point. Are you an idiot or an escapee from a
looney tunes hospital somewhere?

Is English NOT your native language? If not, ask me
to spell it out for you. If it is, then go get yourself
some remedial reading and comprehension training.

Take a hike, Spike. Tinkle up a rope and nurse the wet end.
But whatever you do.....quit blowing snotbubbles outa
your oversized schnoz. That's sick.

A friend of mine is a cop in Lakeland, FL. His department issues Toshiba laptops and digital cameras. He can transmit snapshots of suspects and crime scenes and paperwork right from his car via a trunked system. It eliminates a lot of leg work and increases patrol time.

kenj@inquo.net (Ken Johnson) wrote:

> contribute. Huh?

Contributions are the mainstay of any worthwhile
enterprise. I mean SOMEBODY has to do it. And the
more, the merrier. I suppose an imbecile wouldn't
have anything to contribute, but most anyone else
sure could.....everyone knows something and has their
own specialized areas of expertise.

Those who don't and won't contribute have the
least entitlement to whine, snivel, and complain,
especially about a FREE enterprise..... Sure,
there are always lurkers, and that's fine. But
if they don't post except to snivel and blow great
big snot bubbles, they sure don't have a lot of
room to validate their positions.

> > Tell ya what, though....if you can figure out

> So why don't you filter out the leeches and slugs? They aren't on your
> back they are on your screen. Helpless or don't you want to ignore them?

Ooooooooohhhhhhhh.......getting right to the liver, are we?

Heh heh heh........ Well, for the sake of verbosity, or
the lack there of, I wasn't clear....and hoped people
would read between the lines. In retrospect, I see where
that's too much to expect.....there's no clue. So I will
be a little more verbose and explain..... bear with me.

Anybody with an asshole for an eye can *see* that I can
take the heat. THAT's not exactly the problem. See, it
doesn't friggin matter if *I* filter out the snotwads,
leeches, and slugs. It takes a collective effort to do
that, else the actions of one just go to waste.

By that, I mean - so I filter out the Mackey's, the Boe's,
the Hansen's, et al. No skin off my nose....and I do that'
from time to time. It doesn't help the Cause, though.

I had Mackey and Company filtered out for months on end....
but though the thick of it all, there YOU (and a dozen others)
were popping him in the poopy, right and left. I was the
odd guy out....totally clueless. But I could tell something
was going on........

Not to mention the flood of e-mail that told me everything
Mackey and Company were doing.....and again, here I am, odd
guy out....fat, happy, and clueless.

The point is...... for the greater Cause of scanners and
scanning, it's going to take more than just me to filter
out the twits, lids, snotballs, leeches, slugs, imbeciles,
idiots, fools, and dung beetles. If it's just me, then
after a while, overwhelming curiosity draws me back out
to see what's going on that's so hot.

So it ain't me and the load of leeches and slugs on my
back. You're right.....it must be that I like it. I
always did enjoy a good peeing contest, not to mention
a rowdy rumble now and again. But it can't be just me
to twit these jerks out. It has to be a collective

effort....else everyone gets distracted which eventually
distracts me. Vicious circle....a Mobias strip.

See? I didn't want to get this verbose when I said
what I said in so many words or less. But you asked.
And that's how it is...as I feel and see it. Been
there so many times it's not as if I'm ignorant of the
processes at work there.

> > I'll start a scanner forum that will stick to
> > scanners and scanning.
>
> Thought you did, what happened?

Awww sheeee-it. I was misled. It was a web site that
claimed to offer free mail lists......but it's a come-on
that I didn't learn all about until I had gone out on a
limb. Looks like I'm going to have to spring for ListServ
or MajorDomo in order to do it right. I'm still looking
into it and haven't said anything about it yet because
I ain't done looking and researching.

Speaking of which.....do you know of any good mail list
software for NT 4.0 Server....free or the cheaper, the
better. I was hoping to make it easy on myself with that
web site that hosts mail lists....but they're flaky.

You missed the man's point Bill. He expressed a desire (dream?) for a
group for real
scanning fans. No prerequisites required to express wishes as far as I
know. It could also be considered ones opinion.
```

> Those who don't and won't contribute have the

You have few rivals when it comes to your experience in this area Bill.
Yes you were right Bill. Little old me was just too dull and slow to
read all of the above in the previous statement you made. They still
look like two different concepts to me. What can I say?

#1
Is $319.95 an ok price for a BC895? This is through a dealer, not mail order.
#2
Anyone know GREAT AMERICA TOW CO. (Santa Clara, Ca.) "shop" frequencies? Some of their trucks are dispatched by AAA on one radio, but they also have another "shop" radio in the truck.
The "shop" radio looks to be 800mhz variety. (truncked??)
Anyone know "shop" freqs for Great America Tow? (driver only knew how to 'push to talk' on the radio..)

6485. FS: AOR AR8000 United Kingdom

Hello,

I bought an AR8000 scanner about 6 months ago. I haven't got the time or the inclination to learn how to use it - managed to pick up one side of an analogue mobile phone conversation and UHF TV channels before I got too frustrated to persevere. I suspect the configuration is UK not US.

Can anyone offer any simple advice on using it... or does anyone want to make me an offer?

Thanks
Mike McDonnell

First of all, are you sure the frequencies your trying to input are within the range of the scanner? You should be able to add freqs. as easily as hitting: manual, type in the freq. and hit enter. Be sure to put the . in the freq when typing it...hope this helps.

I don't know about the BID but the EMS freqs should be
unchanged, essentially all the FD takeover consisted of
bureaucratic management shuffling and a rebadging of the
equipment and uniforms.

If you have a web browser, stop by a page I have created to
help users pick a scanner/receiver

http://www.qsl.net/n2mca/PICKRECV.HTM

It will guide you through the decision which must be made
on type, price, performance, features, and so on. There
are also links to other pages to let you know who's in
the game these days and the models I consider good values.

Best of luck and feel free to write and I'll do my best
to help you out!

Hi Chuck,
The best place to go for specs and images would be the
Optoelectronics home page at http://www.optoelectronics.com/

> I had occasion the other day to want to listen in on a radio
> transmission from a public works truck back to his base unit
> concerning the replacement of one of my sewer pipes. I suppose the
> Opto units you were discussing could have made it possible for me to
> have determined the freq they were talking on and been able to tune it
> in on my scanner, right?

That's right. Provided you were close enough and using the
proper antenna to increase your chances of snaggin their
frequency.

As Mark mentioned in his post, if your radio was connected
up to an appropriate radio, as soon as it snags a freq,
the Scout sends instructions to the radio to have it tune
to that freq immediately. Kind of handy.

Be sure to look over the article I mentioned in this month's
MT to get a good overall picture of this activity.

We have operated E.F. Johnson LTR trunked radio systems for 5 years, we currently have 13 channels in operation, two five channel systems and one three channel system. They NEVER fail unless there is a power outage which one of the systems has a battery plant to prevent. In my opinion it is an extremely cost effective and uncomplicated system.

The people that i've spoken with (both system managers, dispatchers, and
LEOs) that use EF Johnson systems are quite happy with their systems.

If they had to do it all over again, they would still go with EFJ over
Motorola or Ericsson

Does anybody know how to modify one of these for 66-88Mhz rather than the default 30-54MHz?

I figure it'd be fairly similair to any other recent Uniden scanner, so if anybody has any information for any model, it'd be much appreciated..

Replies by email please, if anybody else is interested I'll post a response.

6521. Is John Mackey worth listening to???

Some of the myth, rather.
:
: I second that opinion. I used to work for a dealer that took care of
: a Motorola trunk system...junk! Been on an LTR system for about four
: years now, and NO problems.

Well, our company has been using a number of Motorola systems, for quite
a few years. They have been surprisingly trouble free. The one I personally
manage has had zero problems, in two years of operation.

The Motorola system has a couple of weaknesses - so does the Ericcson
system. LTR is not even in the running with either of them.

Bill,
I never saw your message to me (canceled?), but how would I value the opinion of someone who doesn't post much? Interesting question. I read this group every day or so. Over on Compuserve, where it IS possible to SEE who is reading a "forum" (Their equivalent of a usegroup), we have figured something out, for every active poster, there are between 9 and 10 REGULAR "lurkers", that never, or only rarely post anything, but who read the messages every day. Guess what? When they speak, they usually have something they feel is important to say.

Part of the reason people don't post much is either a)They don't have the knowledge to answer the question, or b)someone else has already answered it. When it comes to scanners, there are a lot of people out there who are a LOT more knowledgeable than I am. I post to help when I can. I other groups, I post more.

The opinion I gave is just that, an opinion on a NON technical subject, but one on human nature.

So here I sit, in front of the PC with two scanners, about to crawl back under my rock

Charles, It would not only be possible to capture the frequency but the Scout would instantly turne the scanner to their freq for you. If you are using an AR2700, AR8000 or Icom R10.
Mark

Charles McCallister <chuckiex@ibm.net> wrote in article <Loyunz0gstF5-pn2-ETLpJL533zJn@localhost>...
Rich,

Where might I view these freq counters, if that is what they are?

I had occasion the other day to want to listen in on a radio transmission from a public works truck back to his base unit concerning the replacement of one of my sewer pipes. I suppose the Opto units you were discussing could have made it possible for me to have determined the freq they were talking on and been able to tune it in on my scanner, right?

Thanks.

Charles

that's a given. Just remember where you
heard it first!

> and why do they insist on posting their garbage on
> this otherwise useful and informative newsgroup?

What makes you even notice? You must WANT some of it.
Else, you'd never give it any mind.

> They give our hobby a bad name.

No they don't. People like *you* do. You could just
leave it alone - betwixt TWO people. But nincompoops
like you have to jump in to make it 3...4....8....16....
32.......64......and in those numbers comes the bad name.
The bad name does NOT come from just two guys having
a good old fashioned peeing contest.

> Imagine how the people who are new to the hobby feel

Are you that much of a nincompoop that you can't
see where they'd catch on quick enough and leave
well enough alone? Or are you speaking for yourself?
Even newbies aren't infants, dummy.

> when they post a question or comment,

I *answer* lots of questions and comments and....

> then are butchered by one of them.

....I *never* butcher anyone unless they act like
adam-henries from the start. Well....like you, ferinstance.

> Please, if anyone new to the hobby, or to this newsgroup
> reads this. accept my apology on behalf of those pricks.

I do not authorize you to apologize for me. You may only apologize for yourself. Or take it up with Mackey if you want to apologize for him. He might let you.

But ask 'im first. If you don't, he will slap a booger outa your schnoz and feed it to you. And if you object, he will take off your head and holler down your neck.

Meanwhile, the ranks of the peeing contesters just grew by one....and YOU, pal, made the choice with a free and clear conscience. So don't be preaching and prancing around like some angelic, pompous, sanctimonious evangelist. You done CHOSE to stick your nose into a whole pile of steaming dung........

Obviously you like the smell........ Now don't be picking your nose for a while, y'hear?

<sniggling & cackling>

Pssssst....you done screwwwwwwwwed up, Bunky.

You just need a basic TTL<->RS232 level converter to convewrt between CIV (TTL) and a PC. It's only a few $$ worth of parts, certrinly a lot cheaper than what anybody wants for an interface!
I found a few different plans simply by doing a search for a TTL converter

If you do want to purchase an interface, get the Optoelectronics one, it's an awesome unit, and actually is worth the money they want for it if you use some of the features it has.

Ok, I just don't get it, I mean I have and absolutly admired the Bill Cheek that I know of writing The Ultimate Scanner. But, then I come here and read stuff like this. YES! I bought an SC-150 to start with because I got one at a price that I have NEVER seen ANY 800MHz scanner for to this very DAY! But, what I don't get is that if you want people to become interested in this hobby then why drive them away with these crude and rude insults. Maybe some of us work hard and have to scrape and save for EVERY penny we can until we have the money to get a scanner, and if the SC-150 is the first one then so be it, if the person has true interested they will later see that it is a great scanner, however; to go farther into this hobby they will learn that they need a better one. Notice they will learn, not be harassed by some rambling on of someone who I (along ith many others I am sure) have lost all respect and dignity for, due to his ill, and obnoxious attitude to everyone that even makes a statement/question that THEY want a REAL answer. And before you start, no my sc-150 is not attached to me at all, but obviously your attitude and ideas have changed drastically from the ones I read in a book so few years ago.

It is sad that someone MIGHT have actually thought that B. Cheek could give sound advice, and no I am not saying we ALL need to get one of these, but damn... if we treat everyone as mentally deficiant humans with no care for ANYONE then who the hell will want in the hobby PERIOD!

Yupiteru scanners are not legal to sell
or bring into the USA. Get one at your
own risk and then become a member of a very
small community that can never see the
light of day.

The underground is always that way. So long
as you understand what you're getting into,
the Yupiteru scanners are good pieces of
machinery. But they'll never go anywhere
and you can forget tech support, modifications,
and widespread channels of information about them.

IMHO.

I was a cop for 5 years, and you are right! No matter how any jurisdiction proports the old public safety story as the reason for issuance of speeding tickets, the bottom line is the bottom line. In fact the Mayor of my jurisdiction told us if we would spend more time ticketing out of towners, then we would have had a pay raise.

Well Mr. Cheek the only thing that appers to have a lot of sizzle and not much steak is you and your postings. At one point in time I felt that you were an icon of the scanning hobby and had made much progress in making the hobby in what it is today. Now I feel you are nothing more than an old sour man who has found nothing better in life than hate and discouragement. To continue in this newsgroup war would be as productive as spitting in the wind. My orriginal attempt to draw some common sense to the disagreemnet was not successful and seems to only have wasted my time. So insted of wasting anymore time in a battle of wits with someone who is only half qualified, I will choose to ignore your postings and continue on to something worth reading. If you choose to continue to bash me as you seem to like to do with everyone else, go right ahead, I just won't give you the honor of an arguement any longer. Hopefully when someone is seeking scanner advice, and you give it to them (God help them) they will seek more than just your advice.

Geez, that's too deep for me. I'm still struggling with figuring out why it is that you just won't:
(1) stop fixating on Cheek's sexual procivilties;
(2) say something about scanners every now and then; and
(3) learn how to use a newsreader and post responses to their original threads instead of creating new ones all of the time.

Back in 1987, in Hawaii, we were pulled over by the cops for speeding (I wasn't driving). And as a matter of fact, the officer had a credit card kit and we paid then and there.

Take it easy,

That was an inspired re-telling for our benefit of a terrible, terrible accident and tragedy...the story of the Highway Patrol car made page 1 in the Houston Chronicle and the horror of it is not something anyone will ever forget just reading about it...I can't imagine actually seeing it and being a part of it.

My sincere condolences to all parties involved and their families and friends who are left behind to grief.

--
Take care...

A radio engineer I work with is trying to fix my BC200xlt. It has the "audio loss/no dial light" problem. One of the components doesn't seem to be where it is supposed to be.

Is there any place we can get a schematic? I tried the Sams site but they don't have any Uniden products listed in their database.

Thanks,
Mike Smith

The problem is, we do but Bill Butt-cheek wants to bash everyone because
they don't agree with him.

6556. Virtual banks! PLEASE READ!

Newsgroup: rec.radio.scanner
Date: 1998-02-28 00:00:00 UTC
From: foxcat@mindspring.com
Message-ID: <foxcat-2802981712020001@ip216.philadelphia6.pa.pub-ip.psi.net>
Source record: 168851

The scanner manufacturers should add to scanners...

VIRTUAL BANKS.

Where the user could select the number of channels per bank. If the scanner had 1000 channel storage, the user could define bank 1 to hold 6 freqs., bank 2 to hold 15 freqs, bank 3 to hold 8 freqs., etc., until all storage was filled. More of an opimizing solution. So the possibility of entering bank 1000 could be possible. So... we need some new buttons.

<MANUAL> <PRGBank> <ENTER> 248 <ENT> 6 <ENT>

would create a new bank "248" with 6 freqs. slots available Then...

<PRGBank> 248 <ENTER> <MANUAL><MANUAL> 506.8175 <ENT>

would store 506.8175 into freq. slot 3 of bank 248.

This way we wouldn't waste banks with x channels of 0.0 (locked-out) freqs. Sort/Swap/Delete banks and Resize banks would be available.

Is this so difficult? It's a computer with ears, for god sake!

Of course, if I've thought of it, it's already been done. [sigh]. Whodunnit?

Take it easy,

Andy Burns

The Yaesu FRG-9600 was never built with any "blocked" frequency ranges.
A stock unit will receive 60 MHz to 905 MHz without any gaps.

As I read this the tears flowed...but thank you for relaying this story to us so we know all that happened that night. I live in Los Angeles area and never did hear the whole story from the news. Thank you again.

My prayers go out to the families and loved ones of these officers in their time of grief.

6567. A really stupid problem

Newsgroup: rec.radio.scanner
Date: 1998-02-28 00:00:00 UTC
From: PIDGE35@webtv.net
Message-ID: <6da5h0$ah6$1@newsd-161.iap.bryant.webtv.net>
Source record: 168862

Help! My daugher put silly putty on my scanner (to see if the numbers came off) and now it won't come off!! The bulk of it came off, but now the buttons are covered with orange silly putty! I know this sounds quite strange, but it's true (unfortunatly)

Does anyone have any ideas on how to get it off? Someone told me to stick the scanner in the fridge, but I don't think that's a good idea.

Thanks in advance, for your help.

Robyn

6568. Re: Pro-51 or Pro-64

Rich,
I just wanted to say THANKS to you and to the others who helped me out in deciding on which one to buy. I had read the stuff on your WEB page (and some other ones,) and even printed it out.
Earlier today I went out and bought the PRO-64, and am VERY happy with it so far, as I have found what you said about it was very accurate. The Radio Shack that I went into is located in a mall. I took a look to make sure that they still had it, then picked up the SALE catalogue and went out into the mall to take a look through. On page 2, they have a coupon for the scanner that took $30 off the price (down to $149.99). My original plan was to walk and and buy it, but I'm glad that I took the few extra minutes to look through the Sales promotion.

Well, it's time for me to get to putting more freqs in (so many channel, so many things to listen to.)

Thanks All

You have 48 hours to contact me, After that I will be reporting you to
the US Postal Inspectors, for mail fraud. I Have waited long enough for
either the radio, or a refund, or the insurance check.
There seems to be 2 people named Larry Murphy active on this newsgroup.
The one I am speaking to will know who he is. The one I am upset with
has recently disconnected his phone, and e-mail service.
I do have his Physical address, and will be sending some mail his way.

If anyone else has any suggestions, I am willing to hear them.

Thanks.

6570. NEXTEL use in law enforcement

Newsgroup: rec.radio.scanner
Date: 1998-02-28 00:00:00 UTC
From: Big Daddy <karldahlquist@vistagroupusa.com>
Message-ID: <6daffs$6lq@ecuador.earthlink.net>

We have been reading in various scanner publications about Federal agencies and other city agencies abandoning their radios systems and using digitally-encrypted NEXTEL radios. The following excerpt was a letter to the editor telling what was told to me from an unnamed officer with a large police department on the West Coast. I have deleted the city name to protect the officers from the ineffectual-middle management suckups.

---

with regard to your article on NEXTEL, I spoke at great length with a officer from *a SWAT TEAM of a large police department on the West Coast* and he said a NEXTEL representative gave
them a set of radios to use for a short period of time and they loved them. The City, however, made them give them back (NEXTEL then wanted to loan the whole team (30 officers) radios for a year) because of conflict of interest concerns....

The way it was relayed to me, was that even though the *large city* has moved to a county-wide, all encompassing, every agency-online, new trunked 800Mhz Motorola system, and the SWAT team has digital
encryption, it doesnt work reliably. He described situations where officers would be
standing next to each other, yet the radios couldnt connect, how in encrypted-mode, officers would have to key 2 1/2 seconds to get a clear channel, and that delay jeapordizes officer safety...especially when making felony no-knock entry into a house....

He also stated that their special units no longer send anything sensitive over their
pagers, because of the NYPD/news network pager case. That means on a callout, the station would have to page everyone, they would all have to call back to get the information....with 30 members, this could take a long time. Also, they are also forbidden to use analog cell phones phones for anything
sensitive, making them have to pull over and use a pay phone.

So, the city rents pagers, cell phones, and SABRE radios for the officers...this sum of these rentals has to be around the same as a NEXTEL rental, plus you get the digital, encryption and the built-in network, etc. No matter what you think about
digital encrypted signals, and your obvious scanner bias, the argument can be made (and is being made) to move toward these radios.

It would be much easier to have one radio, to page you at home in bed, and give you the call out information while you are rushing into the city (yes,

most the officers live outside of *this big city*, just like everywhere
else) Then
meet and deploy to confront the suspects. No worries about intercepted
msgs, etc.

Now, when disaster hits, and all the Nextel sites go down, or are
overwhelmed with users...it is not so clear what would happen.

Source record: 168871

I feel sorry for the future of this hobby. A fellow comes onto the newsgroup and asks a simple question about a Sportcat 150.

> > Are these radios a good buy?

He gets a response of.

> If you like a lot of sizzle and not much steak....sure.
> Otherwise, no.

What a magnificent statement! I am sure that answered all of his questions. If I was new to the hobby, what would that tell me? If you were new to scanning, (I have no idea if the person who asked the question is a "newbie" but lets just say he is) could you make a good decision based on that? How about "It is a good starter radio if you can get one cheap but here are some other alternatives." Doesn't that seem a bit more productive and constructive? Then a response about mods and it is off to the races. Flame after flame after flame. What good does that do? All this mess because some poor fellow made the mistake of asking a simple question and received a simple answer. If this person is a newbie, he would do better in another hobby then to get involved with the likes of us. With all of the talented people that are connected to this newsgroup, this could be the greatest place for info. All it resembles these days is a grade school playground.

Source record: 168872

Hey folks! Somebody please answer this one for me - a strange thing happens in my ham shack and I would like an expert's explanation/opinion...here is the situation..

I have several scanners, most of them hooked to external speakers. My new RS TrunkTracker base model Pro-2050 is hooked to an omnidirectional discone antenna on the roof, and I have it hooked to a RS amplified desk speaker. Sometimes I forget to turn off the speaker when I leave the shack and, although all of the scanners are OFF, there is output from the speaker...garbled transmissions that sound somewhat like digitally encrypted voices, etc....what is causing this??

Thanks in advance for any replies...

Robyn,
Anything that you can do to cool the putty will help. Try a icecube in a plastic bag for a min. or two. Then, take a toothbrush and wipe away the hard putty. (the heat from your hands will make it soft again)
Don`t be to hard on your daughter. At least she was trying to save a freq. for you.
Good Luck & Happy Scanning,
Charlie

6584. Kansas Column 0398

Newsgroup: rec.radio.scanner
Date: 1998-02-28 00:00:00 UTC
From: andy <andyb@qni.com>
Message-ID: <34F8D570.791B@qni.com>
Source record: 168879

Kansas Column 0398

1. Douglas/Leavenworth 800 MHz simplex stuff.
2. BPU/KCK update
3. Bonner Springs 800 conventional repeater
4. Dale's KHP centralized dispatch update
5. Topeka/Shawnee trunked talkgroups
6. Upcoming info about the Trunker programs

1. Last month we talked about some 800 MHz conventional repeaters and/or simplex systems that are used by the state, and that apparently put Bob from Tonganoxie into search mode. His findings will be a bit later in this section. First, we go back to 855.9625 which is a KHP car/car frequency. Bob has monitored KDOT around Leavenworth using it with the "follow me" truck that escorts drivers from one end of a construction area to the other County. The KDOT people (you know*the ones leaning on shovels at each end of the construction area) have portable radios on that frequency, and they coordinate traffic. KDOT employees should not take offense about the shovel leaning joke. It is simply tradition to joke about that, just like making fun of cops and donuts. Bob says that 855.9625 is the only frequency that checks out as a statewide simplex channel.
Now, on to Bob's discovery for the Douglas County area. Oops*wait. He had another comment about another frequency from last month*855.9875*which is reported as a Fire Mutual Aid channel. He said to try to punch that in to many Radio Shack scanners and you will find that it is too close to the forbidden cellular phone bands, and it won't go. Rats. I suppose that many Unidens might have the same problem, too, since they make some RS radios.
OK*before we get to Bob's findings, he had another morsel to offer about the KHP vans. Looks like 855.2735 is the portable repeater for them, not 855.7375 as he first suspected. He tends to agree with Dale that .7375 is probably KDOT.
As promised, here is what Bob found. He decided to let the scanner cook on 855.7375 and log what happened. Lo and behold, it sprang to life. The call sign is WPFT496 which is assigned to Douglas County, and all traffic has been the dispatcher in simplex mode. No mobiles have been heard, so he thinks they might be on the input frequency (810.7375) without a repeater. The listings show a different number of mobiles and is under the local government heading. He suspects it is the county government. One of the few transmissions heard consisted of "we'll have an eyeball route for you." Bob had no idea what they meant by that.
Here is where the pudding gets a little thicker. Soon after he sent the above information to me, more traffic was heard on 855.7375. This time the local constabulary (Lawrence PD) was heard in simplex car/car mode.

Units were talking about court appearances, etc. Bob said that if the units were not Lawrence PD, they would have to be KHP or the Sheriff's office. They were definitely law enforcement types. One would have to assume that it is available to all government agencies in the county. So, Bob, it sounds like you answered one question, but found a handful more that need answers. That is the beauty of this hobby. You never have it completely figured out.

You probably thought that was the last you would hear about 855.7375 in this column. Not so. Bob has pretty much confirmed that it is the Northeast Kansas regional Juvenile Detention Center in Lawrence by driving by the place on the way to/from work. He has heard the guards using portables as he cruised by. Bob still hears local law enforcement chit chat traffic on it. Last report is that some law enforcement mobiles have been monitored.

Last, Bob noted that Leavenworth County has 855.4875 assigned to them, with no base licenses*mobile (HTs) only. He speculates it is the Leavenworth County Jail which has used 458.6625 in the past, but may have migrated to 800 in order to be compatible with the Sheriff's Office. Thanks for digging for that information, Bob.

---

2. Another new addition to the roster of regular readers is Chuck. Well, I cannot say Chuck is "regular." He is as odd as I am. He has the latest on the progress of the BPU (Board of Public Utilities)/KCK merger. For those of you that are not aware, KCK and BPU both have Motorola trunked systems, and they are going to merge them into one big system. Chuck has the inside scoop. There are 17 voice repeaters that are ready to go, and are waiting for the end user radios to be installed. Three 150 watt simulcast sites are up, and three receive sites. The receive sites are at:

11th and Steele Road (18 and I-35)
110th and I-70
27th and Vernon (I-635 and Missouri River)

Chuck tell us that when someone transmits, all transmit sites repeat the traffic. All the synchronizing is done at 65th and I-70 (I assume this is a 4th transmit site*Andy.) It is set up so that 3 of the 4 sites can fail and the thing will not roll over and die. The ability to encrypt is planned, as well as a separate freq for mobile data terminals. Next is a list of the frequencies and their functions for the system once they throw the switch.

ch1 860.7625 Voice/control
ch2 859.7625 Voice/control
ch3 858.7625 Voice/control
ch4 857.7625 Voice/control
ch5 860.3125 Voice
ch6 858.9375 Voice
ch7 859.9375 Voice
ch8 858.3375 Voice
ch9 857.9375 Voice
ch10 860.9375 Voice

ch11 857.3375 Voice

Great information, Chuck. Correct me if I am wrong, but other than the fact that more frequencies will be added, we scanner listeners should not notice much of a change*is that right? My understanding is that the addition of frequencies and units will be gradual, rather than one big change all of a sudden. Obviously we will see some new TrunkTracker codes. I am going to put all 17 frequencies in my TrunkTracker so I will be ready when it happens.
---
3. Bob from Tonganoxie is still at it*hunting down frequencies like Clint Eastwood tracking down bad guys in "The Good, the Bad, and the Ugly." With a poncho over his shoulders, and a cigar clenched in his teeth, he closes in on the BC9000 and the music starts.
"Doodle-oodle-oo, wah WAH wah. Doodle-oodle-oo, wah wah WAH." He says Bonner Springs PD has a repeater on 855.9875, which is used a lot. Bonner Springs city has a repeater on 855.2375, according to the files. Bob has logged sporadic traffic on it, and guesses that it is their local government repeater. In the old days of VHF, the Bonner PD had their VHF local government channel in their radios, and used them mostly at night. It is quite likely that they have the same setup now, just on 800 MHz.
---
4. Dale's never ending, relentless pursuit of the centralized dispatch saga has brought us the following details. He heard that Troop C Dispatch (Salina) will move from the old training center to the new communications center by April 1st. (That would be a great day to play a prank on someone*like having all the troopers pretend they cannot hear dispatch. That would drive them nuts!) Troop E Dispatch (Garden City) will lose their midnight shift by then, too. It will be picked up by Salina, of course. Next to go is Olathe (Troop A) and then Norton (Troop D.)
He says the T1 circuit (telephone lines, kinda sorta*Andy) to Troop E (Garden City) is in. In fact, it is literally across the hall from his office.
Last month or so, he informed us about 2 800 MHz KDOT repeaters recently put up at Dighton and Bazine. They are apparently temporary, and will be removed as soon as they get phone circuits installed for remote dispatching. Dale thinks that the Syracuse KDOT office will be able to talk on the 2 towers, and it is possible that Dodge City KDOT will have access to some via remote circuits. He promises to keep us updated.
Your input is really appreciated, Dale. Thanks.

---
5. Some of us got together last month, and met at Overland Park Police
for a tour of their communications center. They have a 5 channel
Ericsson trunked system. They were very pleasant, and their facility is
equally nice. None of them were radio geeks like we are, so they did not
have a lot of technical information to offer, but I saw Kirk grilling
several of the dispatchers. (Our detectives would be envious of his
interrogation techniques.) He probably got some good poop that way.
Anyway, Bob and one of the other Bobs had a great list of talkgroups
for the Topeka/Shawnee County trunked system, and passed it on to me
while we were there. The list was a copy that was several generations
away from the original, so my Optical Character Recognition program on
the computer had a seizure when I ran it through with all those fuzzy
letters. I ended up typing the whole thing by hand. Sheesh*that was a
lot of typing and checking! The list is quite "tab intensive," and my
e-mail tends to screw up tabs, to I apologize for any columns that are
out of whack. I cannot claim to understand all of the numbers and codes
that are in the list either, but I did not want to leave out anything
that might be important later on. Here it is:

6. Rodger and I have been experimenting with the Trunker programs,
and have concluded
that they are the neatest thing since a pocket on a shirt. There is a
LOT of information
you can get from these programs other than just the frequencies. It is
kind of early to
try to put it on paper, so look for it in a KS column coming to a town
near you!

That is it for March. I think this column holds the record. It is 8 pages according to my computer.
As usual, my hat comes off to all of you for sending in the information. Keep it coming.

Andy the Barber

Yea Michael, this guy knows what he is talking about! He obviously has
been reading this group know what he does! You are obviously one of the
Cheek butt kissers!

ROLFMAO!! BAWAHAHAHAHAHAHAHAHAHA!

Yep Iwstirn, you certainly know this newsgroup well. You might ought to
be appointed the r.r.s. historian with those skills you are showing off!

BAWAHAHAHAHAHAHAHAHAHAA!

that is what they said in Seattle, until the officers couldnt talk to each other in Digital mode when they were five feet apart and the SWAT team went back to low power analog radios.....there are very serious limitations in a complete digital system.....

and Motorola fabulous "cellular" technology was just dumped by Sprint PCS ($800 million contract) in favor of Lucent Technologies, seems Motorola has lost is Six Sigma credo, and started selling solutions that dont work as advertised.....dont sell your scanner just yet.....

6591. FS: Two Bearcat handheld scanner radios for sale

Newsgroup: rec.radio.scanner
Date: 1998-02-28 00:00:00 UTC
From: MacUser@NOSPAM.Penn.com
Message-ID: <MacUser-ya023580002802981308280001@news2.penn.com>
Source record: 168886
Cross-posted to: alt.radio.scanner,pa.forsale,rec.radio.scanner

For Sale: Two Bearcat handheld scanner radios

1) BC 100XLT--Asking price $100
2) BC 200XLT--Asking price $175

1) Uniden Bearcat BC 100XLT programmable handheld scanner
100 channels (10 10 channel banks)
11 band coverage (crystal free) + weather
29mhz to 54mhz continuous
118mhz to 174mhz continuous
406mhz to 512mhz continuous
15 channels per second scanning
25 frequencies per second search
automatic search
priority channel
selective scan delay
illuminated liquid crystal display
automatic lockout
track tuning
direct channel access
AC adaptor/charger
flexible ï¿½rubber duckieï¿½ antenna
carrying case
rechargable battery pack
ownerï¿½s manual

2) Uniden Bearcat BC 200XLT programmable handheld scanner
Same as above, with two notable variations
200 channels (10 20 channel banks)
12th band (800) coverage
806 to 823 mhz
849 to 868 mhz
894 to 956 mhz

Note: Both radios have an illuminated lcd display with a timed light. I have modified both radios so that the light is always on. While that does shorten battery life, Iï¿½ve found them to be much easier to read that way in all but ideal lighting conditions. I could reverse that modification if it were critical to a sale.

To the best of my knowledge, Bob Parnass has not done a full length review of these units in Monitoring Times magazine, but he has addressed them in his in his ï¿½Scanner Radio Review Briefsï¿½ which is posted often in the scanner newsgroups. His comments were as follows, quoting directly from that source and attributing the information accordingly:

-----<start quote>-----

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

-----<end of quote>-----

Iï¿½ve used both radios primarily in my car and Iï¿½m thinking of upgrading to a receiver with more channels and a faster scan rate. I would consider trading one or possibly both units for such a handheld or possibly even a mobile scanner receiver. (In other words, if you have something like that, make me an offer!)

6602. MDTW1234 and AEA-FAXII decoder...

Newsgroup: rec.radio.scanner
Date: 1998-02-28 00:00:00 UTC
From: rizzo01@hotmail.com
Message-ID: <6d8p1e$56n$1@news.icnet.net>
Source record: 168899

I have tried and tried and tried to build a decoder for the mdtw1234 program but have failed miserably. Soldering irons and I just don't get along very well. I have seen an advertisement for a hamcomm interface at http://www.radioamateur.com for $19.95. Best price that I've seen so far. Any ideas on if this decoder will work for MDTW1234?

The other thing is I am currently using an AEA-FAXII deocder that came with this software for decoding wefax/rtty/cw and all that jazz. (Almost exactly like hamcomm only a little friendlier interface) The IC that's in the decoder is a TL072, not the 741 op-amp that everyone's talking about. The help manual that's in the hamcomm program says something about you can use a faster op-amp and gives the suggestion of a TL071 but not the 072 which is in mine. Anyone out there have a clue as to what the difference is?

The decoder that I am using is decoding the mdt messages, however it's still garbled like 70-80% of the time. As if it's a poor signal or something. I have a PRO-2006 with a discriminator output that i drilled in the side of the thing and seems to be noise free as far as I can tell. I don't think the signal is the problem, and I think the possibility exists that my decoder for some reason or another cant keep up with the 4800 baud FSK going on down there, but I'm not the electronics expert. Was wondering if any guru's out there could point me in the right direction of where to BUY (no more building pleeeeeeease!) a decent demodulator that's capable of handling the 4800 baud MDT stuff. Any help on this would be MORE than appreciated as I am to my wits end on this thing....

Do you really want a scanner with HF coverage or would you
rather get a dedicated HF rig?

You can probably get off cheaper with a dedicated HF rig
which will also give you better performance. If you go the
scanner/receiver route, you will also get VHF/UHF
capabilities but poorer

It would also help if you mentioned price constraints.
Do you want a base or handheld unit?

The Yupiterus and AORs give very good results for
handhelds which are not dedicated HF radios. iCOMs
and Alincos do pretty good.

But even these are put to shame by even the lowest
end of HF rigs like my ATS-909.

Strong signals,

Now, Now, let's keep this in perspective:

Sean, you don't get "ripped-off" just because you pay more than the going rate for something unless, of course, you're forced to do it against your will. When you fork over $100 for something it's because you felt it was worth at least that much TO YOU AT THAT TIME, regardless of the "going rate."

John, by advising that "it sells for $179 new" Sean was responding only to you (in case you weren't aware of the going rate), but also to the rest of us. We very much APPRECIATE his input, because for lack of information we might end-up paying more than the going rate, REGARDLESS of what it's WORTH to us. And he certainly doesn't need a BADGE to advise US of exactly what we came on this site to discuss.

Gus Bernard

I just upgraded to a Pro-2041 and no longer need my Pro-60.

Freq. range is 30-512, 760-824, 849-869,894-9999.9875 MHz and it has 200 Channels.

Includes original box, manual & rubber duck antenna. It is in like-new condition (only used about 6 - 10 times).

I'll pay shipping to anywhere in the continental US. Elsewhere buyer pays shipping.

Personal check or Postal money order only. If paying by check, please allow 7-10 business day for it to clear. Postal money order ships the day I receive it. Sorry, no CODs.

E-mail if interested or if you have any questions. Thanks.

Personally I would rather have someone tell me that a scanner I was about to buy was a piece of crap than letting me buy it and finding out for myself. I don't know about the rest of you but I would rather wait for a sale or buy a used rig with the features and performance I want and expect before I shell out good money for soemthing that is going to disappoint me.

I have never owned an SC-150 so I can't give an informed opinion on the rig but I do know that when I was new to the hobby I bought my share of scanners that were a lot less than I hoped for. I hope Cheek and the others on this NG continue to tell it like it is to the newcomers so that they can avoid the mistakes that many of us made.

Ken,

I don't have the PRO2042/Opto 353, but I do have the PRO-2006 with the Opto OS456 board.
Also, the ICOM R8500 does not need anything else for computer scanning. It has an RS-232 serial and CI-V computer interface built in.

PRO-2006/OS456

+ Faster scanning.
+ DCS, CTCSS and DTMF decoding.
- No computer download.

R8500

+ Wider coverage. 100khz - 2Ghz
+ More receive modes. CW, USB, LSB, NAM, AM, WAM, NFM, FM, WFM
+ Computer download.
+ Plus a lot more stand-alone operation features.
- Clicking relays as you scan between bands.

Your right about the ICOM costing more, but you get lot more features.

>seem to have a certain dislike for the scanner. I think I might be on to
>something here but no modifications for the scanner so you discourage
>anyone from purchasing it...
>

Well, you are both wrong. The Sportcat 150 IS mentioned in
Bill Cheek's Book "THE ULTIMATE SCANNER". Look on page 36 under the
topic "Ultimate Handheld Scanners - Runner-Ups". I see mention of the
SC-150B. It doesn't go into details....but it is mentioned. I can't
recall off the top of my head if it is mentioned in the regular text.
The SportCat isn't anything to be placed up on a throne and
crowned the king of all scanners, but of course it isn't anything to
be run into the ground either. The SC was made when Uniden was
switching over to the faster breed of scanners...and when they were
trying to cut costs. The SC had some good features, but when you could
buy the BC220/230xlt for a bit more and receive better features...the
SC tended not to be the best buy for the consumer, but the scanner was
marketed extensively through QVC, Merchandise Warehouse, etc.
Unfortunately for the scannists in the metropolitan areas, both of
these models were subjected to quite a bit of intermod/images since
they were dual conversion scanners.
Now if you were looking in that money range (and possibly
higher) I would tend to suggest the BC235xlt. It has the speed,
coverage and features that the BC220/230xlt has plus it is triple
conversion and has trunktracking capabilities. Now if Uniden would
upgrade this model to have computer frequency downloading (not
necessary neededing complete computer control on the handheld, but it
would be nice), military air coverage, other trunktracking
capabilities besides MOT, and a simple discriminator output...they
might have a GREAT scanner on their hands. Oh, might as well put a
S-Meter as a feature as well...the BC3000xlt has a S-meter output on
their IF Amp/Osc/Mixer ICs...too bad they didnt take the time to
incorporate the circuitry to use it.
If you find a SportCat for a good price...then it can be

considered a "good scanner for the price" no matter what model or features it has. I bought a BC220xlt at a pawn shop over a year ago for $70 and gave it to mom and dad. They take it on their trips. They only have to hit the service (SVC) button and it searches all of the frequencies that were allocated for police/fire/ems/etc. They don't have to take tons of lists of freqencies for different areas and constantly programming them into the scanner. The scanner has everything that they want and is simple to use. They didn't pay a cent for the scanner so I guess you could say it was one hell of a scanner for the price.
The consumer has to be educated and know what he is buying. I have seen places where they have the BC220/230xlt priced higher than the BC235xlt. What is even worse, people are buying them thinking that they are getting a better deal. "It costs more...so then it must do more!" You can find a lot out about scanners on the internet, the bad bit is that quite a few ppl won't take the time to educate themselves on creating the 'criteria' needed to do a well precised search on various search engines and dejanews. All I can say is..."Its their loss".

Wiggie

171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Go to Icom's web page, I have a PCR-1000, to many goodies to list, check out the real Icom stuff.

FANTASTIC receiver, with the right antenna...picks up from 0.05Mhz through to 1300MHz and is not deaf anywhere within those limits.
Best money I EVER spent.

Wizzy

Which scanner(s) and or HF receiver(s) or transceiver(s) do you own now
or have you owned in the past?

> with the right antenna...picks up from 0.05Mhz through
> to 1300MHz and is not deaf anywhere within those limits.

So which antennas are the right ones? What are you using with your
PCR-1000?

Details man, details!! :-)

I'm sure there are others that would like to hear a bit more from you
about this mystery box.

Thanks

Glenn

You're onto nothing more than a steaming pile, then.
Quick! Let go before you get your hands all messy!

Discourage? I don't discourage anyone from getting
the SportCat. "Discourage" is an action word, a present
tense verb, okay? Someone ASKED if the SC-150 was a
good value. I answered. Why should I not be true
to myself and what I *know* about it "under the hood"?

Did you want me to lie to the guy?

Now let me casually inquire if you are an idiot? If not,
then consider that a cellular mod is only ONE of dozens
of mods. I've published several mods on the SC-150
in the monthly World Scanner Report. You didn't know
that, now did you, Simmont?

So you see, I really wonder where you get off and what
horse you rode in on and where the hell you came from?

> > But you sure felt beholden to issue your cute little
> > slam about profit and my books....and now you want to
> > get back to the "intended topic"? It wouldn't be so

> Well Sir I don't think we need to get into a name calling game here or
> any other childish games, but I do believe you were more involved in
> this circus long before I entered my two cents worth.

Nevertheless, you waltzed in spouting bullshit about
something of which apparently you knew nothing; and with
what appears to be some kind of an axe to grind; and
all I know is I've never done anything to you. And
then you work up the balls to to spew something about
taking "worthless nonsense somewhere else" even when YOU
introduced an uncalled-for sack of worthless nonsense.

It's there in black and white, Simmont. It's not
an "opinion" of which we're speaking here. It's a
series of undisputable facts, Bubba.

> > Geezus H. Kriste, Simmont, what horse did YOU ride in
> > on? I want to have a talk with that horse.
>
> > And....I *am* waiting for your reply. I'm real curiuous

> > Real curious, pal. So belly up to the bar and spit it out.

> Well where do I get off spouting my "brand of bullshit" basicly just
> denouncing your own brand of bullshit which is nothing more than than
> that. Seems that the problem is you just cant take a critic.

I can take criticism if it has merit. Yours was uncalled-for;
not germane to the topic; and then after spewing it, you
wanted to call "King's X". That's bullshit, pal. You got
something righteous and proper to criticize, do it, if
you must. (So long as I have the same freedom with you!)

But you picked on an off-topic, unwarranted matter, and I'm
not going to take your shit......because that's exactly what
it is....shit! No merit whatsoever, even if your fogged
brain somehow legitimately thought it was meritorious. And
don't tell me you honestly felt it. Even a half-wit knows
good and well that cellular mods aren't the ONLY mods. But
you made it out to be that way. That's deception. You can't
do that. That's why it's shit - totally without merit.

And the fact is....I *have* published mods for the SC-150. Just
because YOU don't know about them does not in ANY fashion
legitimize your vile spew. You could have asked. You didn't.

> Somebody disagrees with you and its an all out war.

Not if the disagreement has legitimacy. The thing is, I don't
waste my time arguing "opinions". I recognize your human
right to believe in some deity of choice. I will not argue
that subject with you. Likewise, if you happen to like fat gals,
that's your business. There is nothing intrinsic to skinny
gals to make them better than fat gals. It is a matter of choice.

You don't like anchovies on your pizza? That's cool. I won't
get involved in a brouhaha over it.

But look, Simmont.....the initial poster to this thread asked
the following question:

->> Are these radio a good buy?

To which I, (the FIRST respondent), replied (exactly):

-> If you like a lot of sizzle and not much steak....sure.
-> Otherwise, no.

Fourteen words there, Simmont. And not a personal word in
the bunch other than the pronoun, "you", preceded by an "If".
There was nothing there to warrant your "criticism". But
you felt like dishing it out. Now the tables are turned,
because my criticism of YOU is intrinsically justified.

> Personally I know I have seen plenty of the BS postings here

AND.....*contributed* to them, too !!!!!!!

> and think its time that we all realized
> what we are subscribed to this newsgroup for.

Speaking for YOURSELF, I hope. And I hope you understand
that if someone else asks about the value of the Uniden SC-150
SportCat, my reply will be much the same. I can't, in any
sense of honesty, say it any differently.

The SportCat is typical of Uniden's propensity to pack
in a lot of sizzle and not much steak. All you have to
do to see the TRUTH before you run off at the mouth again
is to look into the service manual; study the schematic
diagram for a moment.....and you will see. You will see
the same things I see.

We;ll both be looking at a whole lot of "blue sky".....

Once you've done that, come back with all the critique
you want and keep it fair and straight and we'll deal
on that level.

But to spew that the SC-150 offers me no "profit" is
pure underhanded bullshit that serves to BREAK any
sense of a contract of civility between us, Simmont.

You can't spew that crap and reasonably expect me to
grovel at your feet and take it. Instead, I'll slap
a booger outa your schnoz and feed it to you. Which is
not any worse than how YOU treated me *first*.

You *did* open fire first, Simmont. You've got a
personal problem if you don't like me shooting back.
I am a very good shootist, but I never shoot first.

I will shoot back. You need to understand that.

If you want it any different, then elect or hire me
to some exalted position and PAY ME to *take* your
vile spew, and maybe....maybe, that will work. But
I won't just sit here and take it for free. Savvy?

Thanks! I think most folks are like that, which
is why I will continue to tell it like I see it.

Speaking of which, I want to take this opportunity to
demonstrate a crucial issue of scanner marketing and
sales.....that just might enlighten some folks.

Uniden vs. Radio Shack.

It's a fact that some Radio Shack scanners are sleazier
and poorer values that the exalted Uniden SC-150 SportKitten.
No question about it. But here's the thing:

You can open a Radio Schloque catalog and SEE with your
own two eyeballs EVERYTHING they sell. And there *is*
a strong element of HONESTY in their presentation in the
sense that every scanner is clearly presented with a
picture and text....in an order of best-to-worst.

Even a halfwit can see the PRO-70 is better than the
PRO-28. It's all there, laid out in a readable, clean
style and in a reasonably honest, straightforward manner.

It isn't nearly so easy to see where the SportKitty
ranks amongst Uniden's offerings. Uniden doesn't make
it easy for the new scannist to review their lineup.
Instead, you see one scanner here; another there...
and most of what you'll see is the biggest seller, or
what Uniden WANTS to be the biggest seller. Like the
SportKitty, ferinstance.

Uniden *wants* people to buy the SportPuss because
they manufacture it in volume and because it's OLD.
Very old now.

The manufacturer's learning curve is long flattened
and they can crank 'em out by the zillions. And do.
And market them to the yuppie crowd who'll buy anything
with a racing stripe and exhaust pipe flames.....

I'm not saying that the SportGato is a total piece of
junk.... it's just that there's no lugnuts on the
wheels and the engine doesn't fire on all cylinders.
Just like some of Radio Schloque's scanners, except that
Uniden doesn't make that very clear. Uniden doesn't
make anything real clear, for that matter.

Instead they fuel a national Bearcat club and a cute
"Betty Bearcat" frequency directory and feed a little
spark to the hobby engine that, in turn, does the
marketing for them.....mostly for free....and/or
subsidized indirectly by the unwitting hobbyist. After
all, you DO have to PAY to be a member of the "club".

Join the Bearcat club and get a warm fuzzy!
Get told that the SportPuss is the hottest
scanner going! Associate with hundreds of
other SportPuss owners and FEEL GOOD!

..and so the narcotic elixir is dosed to the masses.

Yabbaaaa-dabbbba-doooooooo!

<Gack!>

(Apologies to those who find this offensive. I do
understand that the truth as I see it can hurt at times.)

Hwy. 166 stories tell tragic tale

Motorist convinced officers' fate saved lives of many others
By Danna Dykstra
Telegram-Tribune

HIGHWAY 166 -- For nearly 40 days, El Nino-driven storms had drenched the 1,130 square miles of the Cuyama River basin.
Finally, on Monday night, Feb. 23, after the biggest of the systems had lashed the watershed with up to another six inches, it was enough.

The ground was saturated. The rain had only one place to go, down the 160-mile Cuyama River, from its headwaters in the Cuyama Valley of Ventura County, through the Santa Lucia Mountain range downstream to Twitchell Reservoir, east of Santa Maria.

And it kept on raining.

The river kept on rising, building in strength.

Downstream, a 30-foot wall of water began slapping against a row of sentries -- big boulders, 500 of them each weighing four tons. The wall of rocks -- called riprap -- was there to keep the water away from the ground that supported Highway 166, a winding, rural two-lane artery linking Santa Maria and Bakersfield.

"The river was flowing hard and fast at a point where it was going around a turn, gaining momentum," said Santa Barbara County senior hydrologist Jon Ahlroth. "It attacked the riprap over a period of hours, eating away underneath, undermining the road."

By 2 a.m. Tuesday morning, Feb. 24, the Cuyama River was roaring at 20,000 cubic feet per second. That was the highest flow ever recorded on that river. It broke the old record of 17,300 cubic feet per second set during the March 1938 floods, only a decade after Santa Barbara County began keeping records.

During the next 30 minutes, the river swallowed those four-ton boulders. All but one.

And nothing was left to protect Highway 166.

Within minutes, the dirt and rock and asphalt that supported hundreds of big-rigs and motorists each day disappeared into the muddy, roaring river.

Soon, a dozen strangers would meet on that 100-foot-long section of Highway 166 that no longer existed. Some of their vehicles would stop before plunging into the river. Some wouldn't.

California Highway Patrol officers Britt Irvine and Rick Stovall started the graveyard shift that Monday at 9:45 p.m. The partners were the only two CHP officers assigned to patrol an area that stretched from the San Luis Obispo/Santa Barbara county line south past Orcutt.
Their shift was to end Tuesday at 6:15 a.m. at the Santa Maria Highway Patrol office.

They paired up in one cruiser -- a routine safety practice for graveyard patrols in the region that includes several remote backroads requiring long distances of travel.

At 9:53 p.m. they responded to their first call: a report of a mudslide on the Harris Grade, south of Highway 135 in Santa Barbara County. Finding nothing unusual, they arrived and left the area at the same time: 10:17 p.m. Up until 1:43 a.m. the night was uneventful for CHP Unit 14-1 -- the call sign for veteran officers Stovall and Irvine. They checked reports of minor slides and flooded roads. And then they nabbed themselves a suspected drunken driver.

The officers stopped a 1993 Jeep Cherokee at Concord and Main streets in Santa Maria. After conducting a field sobriety test, the officers decided the man was going to the Santa Maria jail.

He was cuffed and placed in the back of the patrol car. And then, for whatever reason, the officers gave the man a break.

"One of the officers -- we don't know which one -- got behind the wheel of the Cherokee and drove the female passenger to the (driver's) residence, while the other officer followed," said CHP dispatch supervisor Alex Fakhreddine.

"Some officers will do it basically by the book and make the (suspected drunken driver) pay towing costs, in addition to court fees and everything else," said Fakhreddine. "But not these guys. This was typical for these guys."

CHP Unit 14-1 arrived at the jail at 2:12 a.m. During booking, they got a call about a west-facing tanker truck on Highway 166 that had gone over what was then thought to be a large pothole some 10 miles east of Highway 101. The tanker truck owned by John R. Lawson Rock and Oil in Santa Maria had two blown front tires.

Right after the blowout, the truck's driver David Silva hitched a ride with a vehicle heading west on Highway 166 to Arroyo Grande. The car's driver had to continue west nearly 10 miles through the remote region before he reached an area where his cellular phone would work.

He reported the disabled tanker truck some 12 miles east and said it appeared the eastbound lane of Highway 166 had been washed out.

A dispatcher relayed that message to the officers by telephone at the Santa Maria jail. "The gist of the conversation was that they were booking the subject and they advised dispatch to call Caltrans," said Fakhreddine. At 2:44 a.m., the officers radioed that they were leaving the jail and responding to the report of the disabled truck and washout.

A dispatcher advised the officers at 3:08 a.m. that Wayne's Tires from Santa Maria was sending a truck out to assist with the tanker's flat tires. Officers Stovall and Irvine acknowledged that bit of information.

They were never heard from again.

Michael Bennett Tye hadn't worked in three years. The 37-year-old Nipomo man had been through undisclosed personal problems, and was struggling to put his life together.
Around 2 a.m. that Tuesday, Tye said good-bye to his father, James Tye, at the Mars Court mobile home the two shared. Described by relatives as a loner, Tye set out for Visalia to pursue a dream. At 8 a.m. he would start a class at a truck-driving school.

Tye started up his gold 1979 Chevrolet pickup and headed east on Highway 166. It was a moonless night and the fog was thick, but his family wasn't too concerned.

Tye was a one-time Greyhound bus driver who had earned seven safety medals before he was laid off. He was an experienced driver, a good driver, said his sister, Betty Castillo.

He was also a great storyteller, she said. "His nieces and nephews loved to hear him tell stories."

She now holds little hope her brother will ever tell another tale again.

Jim Rowan, a truck driver for Santa Maria's WestEx, set out for Fontana to make a delivery at 8 p.m. that Monday. He was driving south on Highway 101 when heavy rains forced the closure of the highway in Ventura. He turned around and drove back the 110 miles to Santa Maria.
"He returned to the (WestEx) terminal and dropped off the loaded trailers," said a WestEx representative. "He decided he was going to pick up freight at our terminal in Bakersfield. He took two empty trailers and was going to return with the freight to Santa Maria."

Tuesday around 1:45 a.m. Rowan left a note for the WestEx dispatcher that he was heading to Bakersfield on Highway 166 to meet another truck and pick up freight since Highway 101 was closed.

Rowan left the Santa Maria terminal around 1:55 a.m. While eastbound on Highway 166, he made contact by citizen's-band radio with the driver of a westbound tanker truck who warned him to be careful. The trucker said another driver for his company had gone over a pothole about 10 miles up the road and blown two front tires.

Rowan told the trucker "Thanks a lot," said the representative from WestEx. Rowan never mentioned anything about a possible washout to the WestEx dispatcher.

Colleagues estimate he reached it at about 2:30 a.m.

Steve Miller of Santa Maria hadn't been home with his wife and three children for two long weeks. Around 6 p.m. Monday he left the Arcadia department store where he had been working while away from home.
He missed his family terribly.

Miller made his way north on Highway 101 before encountering storm-related road closures at Highways 126, 101 and 33 that forced repeated delays and detours.

He stopped to eat in Ventura, where he encountered a police officer who told him Highway 101 wouldn't be open until morning. Determined to end the "trip from heck," Miller said he backtracked to Highway 5, telephoned a Caltrans information line and learned Highway 166 was open.

At nearly 2 a.m. Miller thought he was on the road home. He was heading west on the highway when he checked his watch: 3:10 a.m.

A short time later he noticed some fog.

"At the same time I saw the fog," he said, "I was airborne."

Herb King, a salesman for Wayne's Tires in Santa Maria, left his Santa Maria home at 2:50 a.m. that Tuesday to assist the truck driver whose tanker was stranded 12 miles up Highway 166. The truck's driver, Silva, had hitched a ride to Santa Maria.
King picked him up outside a nearby 7-Eleven convenience store and the two headed east on Highway 166. "He said he thought some rocks had washed out on the road, causing his two front tires to blow out," said King.

Silva parked the disabled tanker around 2:15 a.m. at a pullout just yards east of the place where the front tires blew out. He later learned that what he thought was a pothole or some rocks on the road was the asphalt tearing apart.

Pieces of the roadway began falling at a rate of 30 feet a minute moments after Silva parked the tanker and began walking east over the eroding roadway. "The road was washing out as he was walking," said King, "and he

didn't know it."

At 3:15 a.m. -- moments before King and Silva reached the tanker -- they abruptly stopped for a Caltrans worker who waved his flashlight at them as he was setting up a barricade.

He stopped King and Silva just 1,000 yards west of a missing section of highway.

At 3:13 a.m. that Tuesday, Sisquoc Community Church Pastor Bill Klein was driving his Dodge Durango west with his daughter on Highway 166 when he noticed headlights from an eastbound vehicle coming toward him.
"We were about ready to pass each other when that car went straight down," said Klein. "That caused me to slam on my brakes."

He realized his left front tire was hanging over the edge of the pavement, and put his Durango in reverse, but it didn't budge. Klein then switched to four-wheel-drive and backed up 50 yards.

He grabbed a flashlight and shined it on the ground. "I could see the torrents of water raging, but no car and no people," Klein said. "The road was gone."

Over the next 30 minutes, Klein ran up and down the highway waving his flashlight toward approaching big-rigs and vehicles from both directions.

He prevented all from falling into the abyss.

Exhausted, Klein left the job of alerting others to some motorists he had stopped. He backtracked up Tepusquet Road and called 911 on his cellular phone when transmission was possible.

Klein believes the headlights he saw nosedive into the water were those of the CHP cruiser. Based on the CHP radio log, he's probably right.

An investigation continues into the order that Rowan, Tye, Miller and officers Irvine and Stovall drove over the edge of the now 400-foot-long chunk of missing highway.

About three hours after encountering the chasm, Rowan and Miller were rescued by helicopter -- Rowan from atop his partially buried 18-wheeler and Miller from a muddy bank he reached after somehow exiting his sinking Toyota Camry.

Officers Irvine and Stovall, who drowned in their battered cruiser, will be honored today with a memorial service and a procession of an estimated 500 patrol cars.

A search continues for Tye, whose Chevrolet truck was recovered from the river.

Pastor Klein has been in daily contact with the CHP assisting the investigation.

"If that Highway Patrol car had been a little sooner or a little later, my daughter and I would have gone over," he said. "The officers literally gave their lives for us. Had they not gone in ahead of us, we would not have survived; the others who came after them would not have survived."

> place. And the Icom PCR-1000.
> etc etc......

I have owned, used and returned the Icom PCR1000 back to the manufacturers due to the poor quality of the software..which by the way is said to be "operating characteristics" by Icom.....just jargon for crappy programming!!!!!!!!

Be careful and gets lots and lots of advice....

The only thing positive I can say about the Icom is that there is no apparent interference problems from a UK spec PC

I purchased a AOR 3000a as a replacement and am now in hogs heaven with this set....no problems at the moment with PC remote control software....etc...etc...

A mate has the WinRadio setup and as of today he has not had any real problems...I haven't laid hands on his setup personally YET :).

Regards.

Cliff.

teacher575@aol.com (Teacher575) wrote:

> There is no question that they are immature,

There certainly is a question! You can't make
a judgment about anyone here in virtuality.

Speaking of real life, ol' Shakespeare said
"All the world's a stage and we, the actors upon it."
Now if THAT has any meaning at all in reality, then
it's a perfect bullseye here in virtuality.

Be careful of your judgments.

> but he's right.....why the hell do you let it bother you?

Ain't nuthin in virtuality should bother anyone
with the singular exception of if they WANT to be
bothered. Some folks are masochists, you know.....

> Why do you read they're replies? You were just asking
> for it by posting your message.

Yup, he begged for a slamdunk. But it amazes the
hell out of me how folks think they can turn the world
right just by opening their jaws on these forums.
Everybody's got the answers to all the world's
problems. Funny how they don't have answers for
hunger, poverty, drugs, alcohol,..... but they sure
know how to fix these newsgroups.

<Balderdash!>

> We all have alter-egos on here and they've
> chosen theirs.

Not necessarily. You're simply making a judgment.
You ought to be smart enough to know that it's hard
enough to judge things out there in REAL LIFE, even
when you see 'em with your own two eyeballs. You
think judgments are any easier here in virtuality?

Are you nuts?

If you think judgments are easier here, you better
hire someone to do your thinking for you. It just
ain't possible to render accurate and fair judgments HERE.

> Keep it up guys. You give the Peter Pans of the
> world a good name.

Maybe you should expound on that one..... I'll be
all eyeballs waiting.....

Wouldn't you care if your rectum was absent
tomorrow morning? I should think you would!

> Mackey is obviously ADD and all we do is feed
> his required need for attention.

No sense in eating if all you're going to do is
take a constitutional in the morning.

Look, Mongrel Mackey is our mascot. He's good
for us. One look at him makes you count your
blessings and thank your deity of choice for
making you a little better than HIM.

> You people should get a life.

Some of us have a very good Life. You ought not
be so quick to render judgments. You really can't
tell anything about anyone here. And if you think
you can, then you need to investigate hiring someone
to do your thinking for you.

Somehow, you've been terribly misled......

Yeah? So? Your statement about the "intent" of the
SC-150 is about as ignorant. How the hell would YOU
know what the SC-150 was intended for?

I am telling you with a certain degree of technical
authority that it was intended for people who have
no way of knowing any better.

WHO do you think it was intended for? Imbeciles?

Really now, you don't say? Hmmmm, let's see what dribbled
outa your jaws a bit earlier.....unsolicited and unwarranted,
I might add:

-> Ahhh, I see Mr Cheek does not approve of the Sportcat 150, must be
-> becouse there aren't any cellular mods for it and thus cannot profit
-> from it in anyway by selling more books. Of course this is just my
-> view, I could be wrong.

So just exactly HOW does what you said there jive and
harmonize with your latest spew, including:

> Lets get back on the intended topic, SCANNERS. Take the rest
> of the worthless nonsense somewhere else.

Please explain your justification for spewing about
cellular mods and my books. I just don't see where
my books are related to the SC-150 in the slightest,
especially since the SportCat isn't even mentioned
in my books.

But you sure felt beholden to issue your cute little
slam about profit and my books....and now you want to
get back to the "intended topic"? It wouldn't be so
bad except that YOU failed to take YOUR "worthless
nonsense somewhere else" and now you call for everyone
to do as you SAY; not as you do?

Geezus H. Kriste, Simmont, what horse did YOU ride in
on? I want to have a talk with that horse.

And....I *am* waiting for your reply. I'm real curiuous
about where the hell you get off spouting your brand
of bullshit and then preaching about "worthless nonsense".

Real curious, pal. So belly up to the bar and spit it out.

Sounds to me like the system you're hearing is a GE/Erricson system. The North Las Vegas Police Department when they switched to 800 MHz had that similar buzzing sound plus the six-note musical sound at the end of each broadcast. Now, NLVPD's buzzing sound is rare and each transmission ends with four short beeps.
